Ain Shams University

2009

Abstract

This study investigates the effect of activating awareness of metacognitive processes on developing writing quality, grammatical accuracy, grammaticality judgment in terms of cohesion features as outlined by the model of Halliday and Hasan (1976).

Following the mixed design and the collective case study approach, the study explores the impact of activating eight freshmen case studies' (four low achievers and four high achievers) metacognitive awareness of self-evaluation, self-monitoring and centering attention as main metacognitive processes; the independent variable, on improving the quality of ESL writing in terms of cohesion features in expository written texts as a dependent variable.

It tests one main null hypothesis that has predicted that that there would be no statistically significant differences between the subjects' pretest mean scores and the posttest mean scores within groups on the features of cohesion in the error correction test, the gap-filling test and the expository essays.

To know the effect of the proficiency level on the development of metacognitive awareness, the study compares between the posttest mean scores difference across the two groups of low and high achievers.

The major finding of the study refutes the main assumption as there are statistically significant differences between the pretest mean scores and the posttest mean scores group within the two groups of low achievers and high achievers on the seven features of cohesion in the error correction test, the gap filling test and the expository essay. The study also finds no statistically significant differences between the posttest mean scores difference across groups. This might refer to the slight effect of the proficiency level once metacognitive awareness is activated.

Starting from the SLA domain, the study concludes with many pedagogical implications in the field of TEFL/TESL. For the college composition courses and curricula to be effective, inclusion of metacognitive processes is an instrumental part. More significantly, the analytical rubric that the researcher develops can be used as a tool for assessing cohesion features in the expository texts.

Acknowledgments

This dissertation would not have been possible without the help of several people. First of all, I would like to thank my dissertation committee chair, **Prof. Amal Kary, and Dr. Nevine Hassan**, co-supervisor, and the members of my dissertation committee, **Prof. Amani El-Shazly** and **Prof. Laila Abdel Aal** for believing in this study as much as I do. Your impressive knowledge, clear minds, and positive attitudes will always be inspirational to me.

I would like first to express my deepest gratitude and intellectual indebtedness to professor **Amal Kary**, the dissertation main advisor. Her insightful comments and feedback, reflections on my research have been indispensable ingredients in my success. She has been a central figure in developing my skills as a researcher in the field of applied linguistics. Special thanks are to be given for her patience for supervising the different phases of this research.

I also must thank **Prof. Mustafa Riad** for his support and encouragement. His leadership has acted as a mine of inspiration. Special thanks are also due to all the professors and colleagues in the Department of English, Ain Shams University in general and **Dr. Inas El-Ibrashy, Dr. Nagwa Ibrahim**, and **Nardine Nabile** for their support and encouragement.

In the same manner, I would like to thank the dissertation panel **Prof. Laila and Prof. Amani El-Shazly**; the latter who introduced me to the world of language acquisition during teaching me in the M.A. preliminary year. She has instilled in me great respect and fondness for the field and encouraged me further to invest in it.

A special word of thanks also goes to my colleague, **Nevine Saeed**, for her the constructive feedback that has helped me to revisit the ideas.

My family deserves my respect and appreciation for their constant support, especially, my mother. Finally yet importantly, I thank my friends, **Samir, Mahmoud** and **Osama**, for their supportive attitude.

Finally, this dissertation could not have been possible without the participation of all my participants. I greatly appreciate their generosity with their time and efforts to submit papers, complete surveys, and participate in interviews. This dissertation would certainly not exist if they were not generous with their time and willingness.

Dedication

To my father
who
shared with me love of hard work ,
and to
my mother
whose
true sense of sacrifice, love and support
have made this endeavor possible,
with heartfelt gratitude
