#### **ABSTRACT**

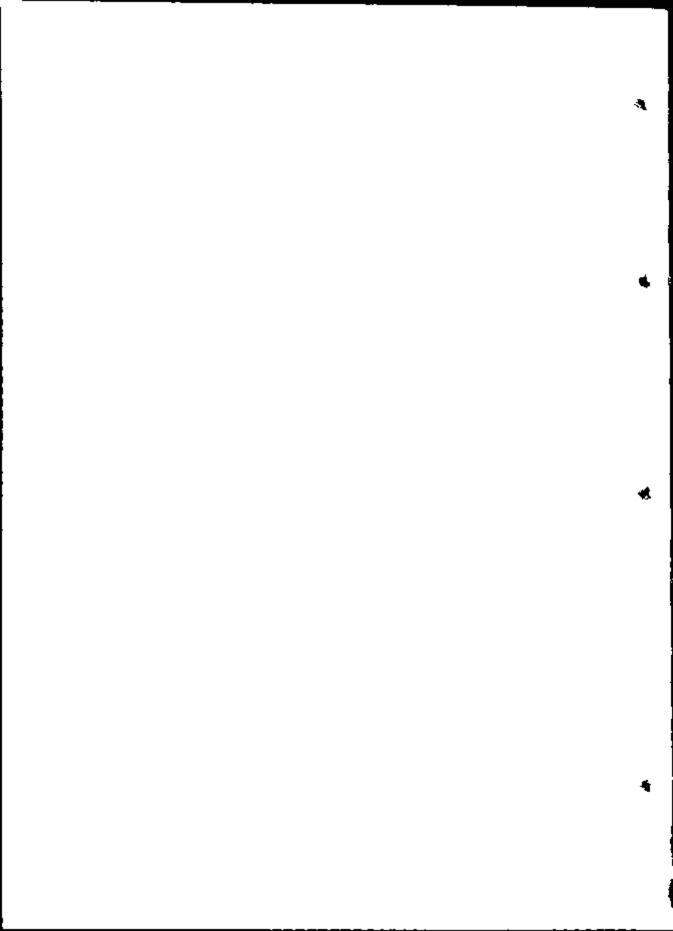

This study was conducted on the technicians in the radiology department at Kasr El-Aini hospital. They are occupationally exposed to low level of ionizing radiation, 36 workers from different departments of Kasr El-Aini hospital were chosen as control group.

The environmental measurements in the radiology department were below the permissible limits of Egypt 50 Sv/year.

The most significant result was high frequency of chromosomal aberrations in the exposed group. There was significant reduction in chromosomal aberrations after intake of vitamin E 1g/day/ 50/days or vitamin C 2g/day/50days. There was no significant reduction in chromosomal aberrations after intake of both (Vit E 1g/day and Vit. C 2g/day) for 50 days.

#### Key Words:

Ionizing radiation-Chromosomal aberrations-Antioxidant vitamins.

#### ACKNOWLEDGEMENT

I am greatly honored to express my deepest gratitude to Dr. Frederic Berge Ananian Professor of Industrial Medicine and Occupational Diseases, Cairo University.

He gave me much of his valuable experience, advice and time, fatherly attitude guided all the steps of this study. No words of thanks could ever express my feelings towards his extreme support.

Many thanks Dr. Frederic for your help and generosity.

I would like to express my sincere gratitude to Dr. Mamdouh Mahfouz

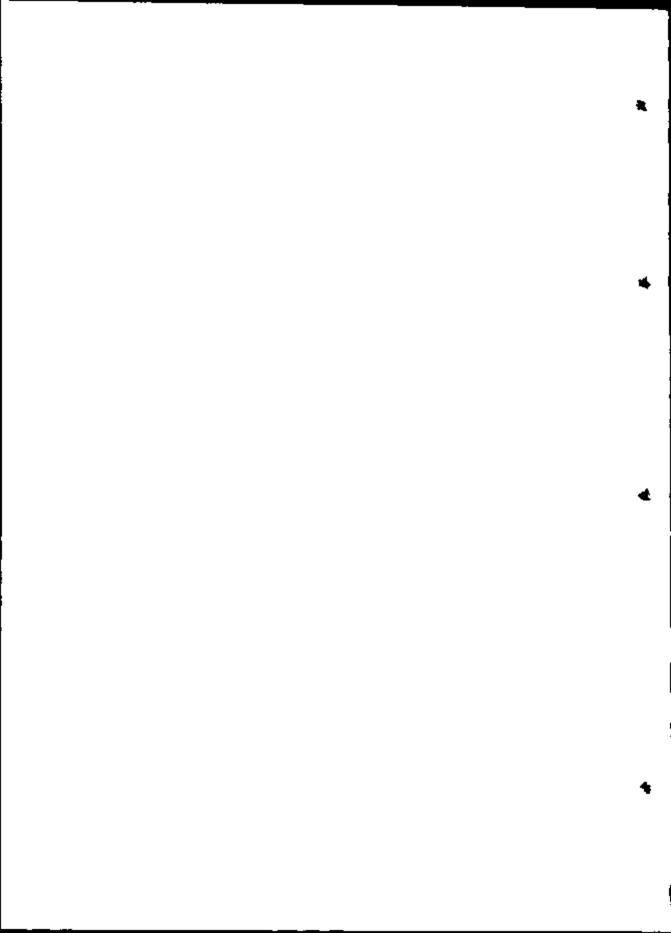

Assistant Professor of Radio-Diagnosis, Cairo University for his continuous encouragement, kind help and valuable guidance throughout this study.

I wish to express may deep gratitude to Dr. Bahira M. Saeed Lotfi Assistant Professor of Industrial Medicine and Occupational Diseases, Cairo University. She lielped me so much in doing the cytogenetic analysis. She gave me much of her time, experience, meticulous valuable advice and support, that can not be expressed in words, her encouragement were indispensable for the completion of this work.

I extend my sincere gratitude to Dr. Nermeen Hamdy, Assistant Lecturer of Industrial Medicine and Occupational Discases, Cairo University who did not hesitate to offer much of her time, effort and support.

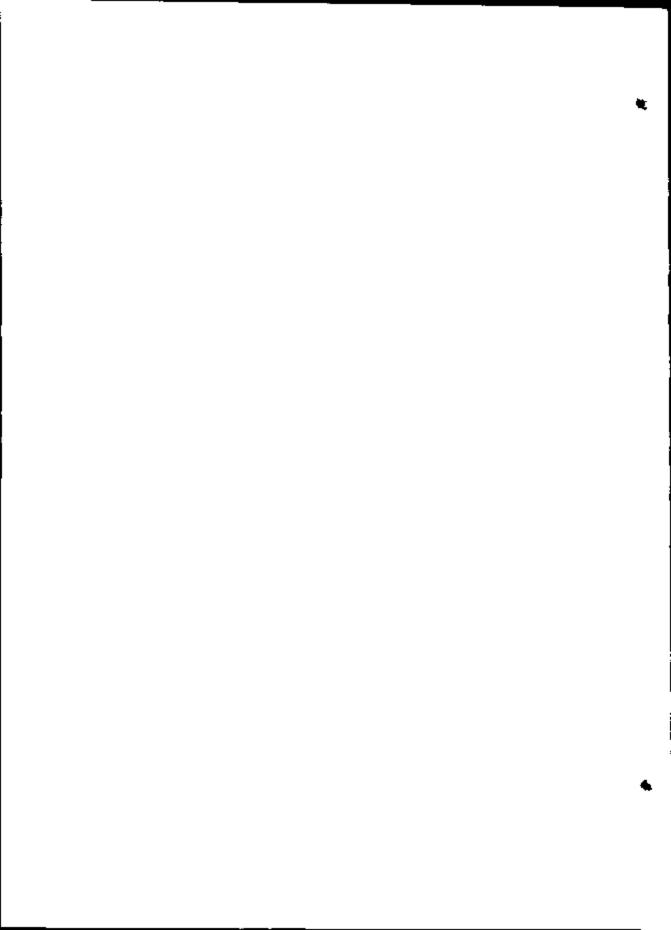

I am grateful to all examined group of this work for their co-operation and grateful help.

Many thanks are own to all the staff members of Industrial Medicine and Occupational Diseases Department, Cairo University for their advice support and encouragement.
