ABSTRACT

Name: Eman Al-Tohamy Abd Al-Satar Metawea

Title of Thesis: Monitoring and evaluation of some chemical parameters associated with changing the effluent rates on El-Rahawy drain and their impact on water quality of Rosetta branch.

Degree: (M.Sc.) unpublished Master of Science Thesis, Faculty of Science-Cairo University, 2009.

The current investigation aims to study the drainage water characteristics of El-Rahawy drain and its effect on water quality of Rosetta branch with taking for consideration the seasonably mutation and the effluent rates of El-Rahawy drain on Rosetta branch. El-Rahawy drain lies at 30 Km to the North of Cairo at El-Kanater El-Khyria area, the drain receive domestic and agricultural wastes from Giza city and pure its effluents directly into the Nile water of Rosetta branch.

To achieve this work, surface water and bed sediment samples were collected from eight sampling locations along El-Rahawy, El Moheet drain and Rosetta branch during the period from June 2008 to May 2009. The physico-chemical and microbial analysis of collected water samples revealed that the drain as well as Rosetta branch downstream the drain suffering from chemical and bacteriological pollutions specially during the low flow condition (winter season) while Rosetta branch upstream El-Rahawy drain was within the permissible standard limits. Along El-Rahawy and El Moheet drain, there was a sharp increase in EC, NH₃, COD, BOD, TDS and great depletion in DO which was seriously deteriorating the area downstream the drain. While bacterial contamination was recorded in all studied water samples with varying levels of

pollution, being maximum at the middle of El-Rahawy drain, and the concentration of heavy metals in water samples was in the order of Fe> Mn > Zn> Cu> Pb> Cr> Ni> Co> Cd.

Analyses of digested bed sediment samples showed high concentrations of organic matter, carbonate and total heavy metals which ranged in the order of Fe> Mn> Zn> Cr> Cu> Co> Pb> Ni> Cd.

Keywords: physico-chemical, microbial, surface water, bed sediment, low flow condition, Rosetta branch and El-Rahawy drain.

Supervisors:-----,-----

Prof. Dr. MOHAMED M. SHOUKRY

Chairman of Chemistry Department.

Faculty of Science- Cairo University.

APPROVAL SHEET FOR SUBMISSION

Title of [M.Sc.] Thesis: Monitoring and evaluation of some chemical parameters associated with changing the effluent rates on El-Rahawy drain and their impact on water quality of Rosetta branch.

Name of candidate: Eman Al-Tohamy Abd Al-Satar Metawea

This thesis has been approved for submission by the supervisors:

1- **Prof. Dr. GEHAD GENIDY MOHAMED**

Signature:

2- **Prof. Dr. MOHAMED MOKHTAR YEHIA**

Signature:

Prof. Dr. MOHAMED M. SHOUKRY

Chairman of Chemistry Department.

Faculty of Science- Cairo University.

NOTE

Beside the work carried out in this thesis, the candidate had attended and successfully passed a final examination of M.Sc. courses (2007) in non organic chemistry covering the following topics:

- | | |
|--------------------------------------|-----------------------------------|
| 1- Mechanism of inorganic reactions. | 2- Advanced analytical chemistry. |
| 3- Chelatimetry. | 4- Statistical thermodynamics. |
| 5- Quantum chemistry. | 6- Molecular structure. |
| 7- Solar energy. | 8- X- rays thermal analysis. |
| 9- Adsorption chemistry. | 10 -Molten salts and Metallurgy. |
| 11- Voltammetry. | 12- Nuclear chemistry. |
| 13- Group theory. | 14- Electrochemistry. |
| 15- Electro Kinetic phenomena. | 16- Catalysis. |
| 17- Advanced inorganic chemistry. | 18- Physical polymer. |
| 19-Statistical. | 20- German language. |

Prof. Dr. MOHAMED M. SHOUKRY

Chairman of Chemistry Department.

Faculty of Science- Cairo University.

ACKNOWLEDGMENT

*Before all and above all, thank to **ALLAH** most gracious for great help in all my steps in this work.*

*The author wishes to record her high appreciation, thanks and greatly indebted to **Prof. Dr. Gehad G. Mohamed**, Prof. of Inorganic and Analytical Chemistry, Chemistry Department, Faculty of Science, Cairo University for suggesting the topic of investigation, kind scientific for supervision, the valuable help, guidance, valuable discussion and criticism through all this work.*

*The author wishes to express her deepest gratitude and thanks to **Prof. Dr. Mohamed M. Yahia**, Prof. of Water Quality, Central Laboratory for Environmental Quality Monitoring (CLEQM), National Water Research Center (NWRC), El Kanater, for suggesting the topic of investigation, giving every possible help, facilities, guidance and support throughout this work.*

Special thanks are due to the working groups at the Central Laboratory for Environmental Quality Monitoring (CLEQM), National Water Research Center (NWRC) for their kind cooperation throughout all this work.

Eman Al-Tohamy

*Finally, I extend my deepest gratitude to my Dear **P**arents, my **b**rother and my **S**ister for their kind encouragement and love. To them I dedicate this thesis.*
