

Fabrication of plastic conductive electrode based on conductive polymer nanocomposites

Thesis submitted

By

Heba Elsayed Ali Hassan

B.Sc. Major Chemistry, Faculty of Science, Ain Shams
University, 2009

In partial fulfillment of the requirements for the
Degree of Master of Science in Chemistry

To

Chemistry Department

Faculty of Science

Ain Shams University

(2013)

Supervisors

Prof. Dr. Mohamed Mahmoud Mohamed Aboaly

Prof. of inorganic chemistry, Chemistry Department, Faculty of
Science, Ain shams University

Assoc. Prof. Mona Hassan Abdel Rehim

Assoc. Prof. at Packing and Packaging Materials Department,
National Research Center

Assoc. Prof. Ahmed Mahmoud Youssef

Assoc. Prof. at Packing and Packaging Materials Department,
National Research Center

Fabrication of plastic conductive electrode based on conductive polymer nanocomposites

Presented by

Heba Elsayed Ali Hassan

B.Sc. Major Chemistry, Faculty of Science, Ain Shams
University, 2009

Degree: M.Sc. degree in Chemistry

Under the supervision of:

Signature

Prof. Dr. Mohamed Mahmoud Aboaly

Prof. Dr. M. S. Antonious

Acknowledgement

First and foremost, my great praise and sincere thanks should be submitted to ALLAH for continuous support to me, without his help and the power He gave to me, the accomplishment of this work would have been certainly impossible. I would like to express my utmost gratitude to:

*My super adviser **Prof Dr. Mohamed Mahmoud Aboaly**, prof. of inorganic chemistry, Chemistry department, Faculty of Science, Ain Shams University, for his help, valuable comments and a complete revising of the thesis.*

*My main advisor **Assoc. Prof. Mona Hassan**, Assoc. Prof. at Packing and Packaging Materials Department, National Research Center, for giving me the chance to work on a very interesting project and whose fingerprint illuminates the pages of this thesis.*

*My sincere advisor **Assoc. Prof. Ahmed Youssef**, Assoc. Prof. at Packing and Packaging Materials Department, National Research Center, for his help, true encouragement and support. He not only helped me in scientific research, but also gave me a lot of time and advices in many aspects of the life.*

*Last but not least, my deepest gratitude and appreciation to my **parents**, who gifted me great love and support to strive for the best I could do in everything I did. Also I thank my **sisters and brothers** for their endless love, understanding, and support.*

Table of Contents

Title	Page
List of Figures.....	i
List of Tables.....	vi
List of Schemes.....	vii
List of Abbreviations and symbols.....	viii
Abstract.....	x
Chapter 1: Introduction and Literature Survey	
1.1. Nanomaterials synthesis, properties and applications.....	1
1.2. Titanium (IV) oxide (TiO₂).....	4
1.3. Synthesis of titanium dioxide nanomaterials.....	5
1.4. Titanium dioxide applications.....	6
1.5. Conductive polymers.....	8
1.6. Conductive polymers applications.....	11
1.7. Superiority of polyaniline compared to other conducting polymers.....	12
1.8. Chemical structure of polyaniline.....	13
1.9. Synthesis of polyaniline.....	15
1.10. Special properties for polyaniline (PANI)	19
1.11. Different models depicting the origin of conductivity in polyaniline.....	20
1.12. Factors influencing the electrical conductivity of polyaniline..	24

1.12.1. Oxidation level and molecular arrangement.....	25
1.12.2. Percentage of doping and type of dopant.....	25
1.12.3. Molecular weight.....	26
1.12.4. Percentage of crystallinity and inter-chain separation.....	26
1.13. Polyaniline nanocomposites.....	27
1.14. Polyaniline films.....	29
Aim of work.....	34

Chapter 2: Experimental

2.1. Materials.....	35
2.2. Methods.....	36
2.2.1. Synthesis of titanium dioxide (TiO ₂) nanowires.....	36
2.2.2. Treatment of TiO ₂ nanowires using 1-hexadecyl trimethylammonium chloride (TiO ₂ /CTAC) and cetyltrimethylammonium bromide (TiO ₂ /CTAB).....	37
2.2.3. Treatment of TiO ₂ nanowires using dimethylformamide (TiO ₂ /DMF).....	37
2.2.4. Synthesis of polyaniline (PANI) by standard method.....	37
2.2.5. Synthesis of PANI via interfacial polymerization using HCl as dopant.....	38
• Preparation of PANI using different organic solvents and with different ratios.....	38
• Preparation of PANI under different acidic	

conditions.....	39
2.2.6. Synthesis of PANI via interfacial polymerization using nitric acid (HNO ₃) as dopant.....	39
2.2.7. Synthesis of titanium dioxide/polyaniline (TiO ₂ /PANI) nanocomposites.....	40
2.2.8. Synthesis of conducting polyaniline films.....	41
• Preparation of PANI films by blending with PVA	41
• Preparation of PANI films by spin coating or drop casting technique on PET and PVA substrates.....	41
2.2.9. Preparation of layer-by-layer (LBL) film of PANI-CSA and TiO ₂ /CTAB on PET	42
2.3. Characterization Techniques.....	42
2.3.1. Structural Analysis by Fourier Transform Infrared Spectroscopy (FTIR).....	42
2.3.2. Ultraviolet – Visible Measurements (UV-Vis).....	42
2.3.3. X-Ray Diffraction Measurements (XRD).....	43
2.3.4. Thermal Analysis.....	43
2.3.5. Scanning Electron Microscope (SEM).....	43
2.3.6. Transmission Electron Microscopy (TEM).....	43
2.3.7. Gel Permeation Chromatography (GPC).....	44

2.3.8. DC-Conductivity Measurements.....	44
2.3.9. Photoelectrochemical Measurements.....	44

Chapter 3: Results and Discussion

3.1. Characterization of titanium dioxide (TiO₂) nanowires.....	46
3.1.1. Morphological Analysis.....	46
3.1.2. X-Ray Analysis.....	48
3.1.3. Brunauer, Emmett and Teller (BET) analysis.....	49
3.2. Modification of TiO₂ nanowires (I).....	51
3.2.1. X-Ray Analysis.....	52
3.2.2. Morphological Analysis.....	53
3.3. Structural investigation of PANI prepared by standard method using various monomer/oxidant molar ratios at different reaction times.....	54
3.3.1. Fourier Transform Infrared Spectroscopy Analysis (FTIR)....	56
3.3.2. Ultraviolet – Visible Measurements (UV-Vis).....	58
3.3.3. X-Ray Analysis.....	59
3.3.4. Morphological Analysis.....	60
3.3.5. Thermal Gravimetric Analysis (TGA).....	61
3.3.6. Differential Scanning Calorimetry Measurements (DSC)....	62
3.3.7. Electrical Conductivity Measurements.....	64
3.4. Structural investigation and properties of PANI synthesized via	

interfacial polymerization method using HCl as dopant.....65

3.4.1. Fourier Transform Infrared Spectroscopy Analysis (FTIR)..66

3.4.2. Ultraviolet – Visible Measurements (UV-Vis).....68

3.4.3. X-Ray Analysis.....70

3.4.4. Morphological Analysis.....72

3.4.5. Thermal Gravimetric Analysis (TGA).....77

3.4.6. Electrical Conductivity Measurements.....80

3.4.7. Gel Permeation Chromatography Analysis (GPC).....82

3.5. Structural investigation and properties of PANI synthesized via interfacial polymerization method using HNO₃ as dopant.....83

3.5.1. Fourier Transform Infrared Spectroscopy Analysis (FTIR)..84

3.5.2. Ultraviolet – Visible Measurements (UV-Vis).....85

3.5.3. X-Ray Analysis.....87

3.5.4. Morphological Analysis.....88

3.5.5. Electrical Conductivity Measurements.....89

3.6. Structural investigation and properties of TiO₂/PANI nanocomposites.....90

3.6.1. Fourier Transform Infrared Spectroscopy Analysis (FTIR)...92

3.6.2. Ultraviolet – Visible Measurements (UV-Vis).....94

3.6.3. X-Ray Analysis.....96

3.6.4. Thermal Gravimetric Analysis (TGA).....	97
3.6.5. Differential Scanning Calorimetry (DSC).....	99
3.6.6. Electrical Conductivity Measurements.....	100
3.7. Characterization of polyaniline films.....	103
3.7.1. Electrical Conductivity Measurements	105
3.7.2. Optical Measurements	108
3.7.3. X- Ray Analysis	113
3.8. Studying of the photoelectrochemical properties of layer-by-layer (LBL) film of PANI-CSA and TiO₂/CTAB.....	114
Chapter 4: Summary and Outlook.....	116
References.....	120
Arabic Summary	

List of Figures

No.	Title	Page
1.1	The chemical structures of polyaniline: (A) Fully reduced (leucoemeraldine base); (B) Fully oxidized (permigraniline base); (C) half oxidized (emeraldine base)	14
1.2	Chemical structure of PANI; (A) before doping; (B) after doping	14
1.3	Stoichiometry of aniline hydrochloride oxidation with ammonium peroxydisulfate to yield polyaniline (emeraldine) hydrochloride	15
1.4	crystalline (ordered)-amorphous (disordered) or heterogenous structure of PANI	20
1.5	Schematic representation of EB of polyaniline before protonation (a), after 50% protonation (b), formation of bipolaron (c) and polaron (d)	22
1.6	Schematic presentation of conduction pathway of polyaniline (the +ve sign represents the cation radical acting as a hole and the -ve sign represents neutral nitrogen)	24
2.1	Teflon-lined autoclave	36
2.2	Schematic representation of the system used in photoelectrochemical measurements	45
3.1	TEM image of TiO ₂ nanowires (I) obtained at 240 °C and 72 h.	47
3.2	TEM image of TiO ₂ nanowires (II) prepared at 240 °C and 120 h	47
3.3	SEM image of TiO ₂ nanowires (I) synthesized at 240 °C and 72 h	48

3.4	XRD pattern of TiO ₂ nanowires (I)	49
3.5	The adsorption-desorption isotherms of (a) P ₂₅ and (b) TiO ₂ Nanowires (I)	50
3.6	XRD pattern of (a) TiO ₂ sodium form, (b) TiO ₂ /CTAB and (c) TiO ₂ /CTAC	53
3.7	TEM image of TiO ₂ nanowires modified with CTAB as an example	54
3.8	Photos of PANI synthesized by standard chemical oxidative polymerization after (a) 10 min, (b) 15 min and (c) 25 min	55
3.9	A number of different initial products can be produced from the oxidation [O] of aniline	56
3.10	FTIR spectra of PANI samples using various ANCl:APS molar ratios at different reaction time	58
3.11	Absorption spectra of PANI samples using various ANCl:APS molar ratios at different reaction time	59
3.12	XRD pattern of PANI 1:1.25	60
3.13	SEM image of PANI 1:1.25	61
3.14	TEM image of PANI 1:1.25	61
3.15	Thermogram of PANI 1:1.25	62
3.16	DSC traces of polyaniline 1:1.25	63
3.17	Thermal crosslinking reaction among EB-form polyaniline molecular chains	63
3.18	Schematic representation of the interfacial polymerization reaction progress.	66
3.19	FTIR spectra of PANI 1:0.8 (APS:AN) using different organic solvents (a) 1,3 butandiol (t = 4 h), (b) isopropanol (t = 4 h), (c) toluene (t = 4 h), (d) xylene (t = 4 h) and (e) toluene (t = 24 h)	68
3.20	UV-visible spectra of PANI 1:0.8 (APS:AN) using different organic solvents (t = 4 h) (a) 1,3 butandiol,	69

	(b) isopropanol, (c) toluene and (d) xylene	
3.21	UV-visible spectra of PANI (t = 24 h) using xylene different ratio (APS:AN) (a) 1:0.8 and (b) 1:0.3	69
3.22	UV-visible spectra of PANI using toluene (APS:AN) 1:0.8 (t = 24 h) under different acidic condition (a) 1 M, (b) 0.4 M and (c) 0.25 M	70
3.23	XRD of PANI (APS:AN) 1:0.8 (t = 4 h) using different organic (a) 1,3 butandiol, (b) isopropanol, (c) toluene and (d) xylene	71
3.24	XRD of PANI (APS:AN) 1:0.8 using toluene (t = 24 h) under different acidic condition (a) 0.25 M, (b) 0.4 M and (c) 1 M	72
3.25	TEM photograph of PANI prepared using toluene 1:0.8 (APS:AN), t = 4 h	73
3.26	TEM photograph of PANI obtained using toluene 1:0.8 (APS:AN), t = 24 h	74
3.27	TEM photograph of PANI synthesized using xylene 1:0.8 (APS:AN), t = 24 h	74
3.28	TEM photograph of PANI prepared using toluene 1:0.3 (APS:AN), t = 24 h	76
3.29	TEM photograph of PANI produced using xylene 1:0.3 (APS:AN), t = 24 h	76
3.30	SEM image of PANI obtained using toluene 1:0.8 (APS:AN), t = 24 h	77
3.31	SEM image of PANI synthesized using xylene 1:0.3 (APS:AN), t = 24 h	77
3.32	TGA curve of PANI 1:0.8 (APS:AN) (t = 4 h) obtained using different organic solvents (a) 1,3-butandiol, (b) isopropanol, (c) toluene and (d) xylene	79
3.33	TGA curve of PANI 1:0.8 (APS:AN) prepared using toluene as organic solvent at different reaction time	80

	(a) 4 h and (b) 24 h	
3.34	FTIR spectra of PANI using HNO ₃ as dopant (a) PANI.X and (b) PANI.T	85
3.35	UV-visible spectra of PANI.T dissolved in NMP	87
3.36	UV-visible spectra of PANI.X dissolved in (a) deionized water and (b) NMP	87
3.37	XRD pattern for PANI.X	88
3.38	TEM image of PANI.X	89
3.39	TEM image of PANI.T	89
3.40	Formation mechanism of TiO ₂ /PANI nanocomposites by in-situ polymerization	92
3.41	FTIR spectra of (a) PANI 1:1.25, (b) PANI 1:1.25+0.5% TiO ₂ , (c) PANI 1:1.25+1% TiO ₂ and (d) PANI 1:1.25+2% TiO ₂	93
3.42	UV-visible spectra of (a) PANI 1:1.25, (b) PANI 1:1.25+0.5% TiO ₂ , (c) PANI 1:1.25+1% TiO ₂ and (d) PANI 1:1.25+2% TiO ₂ .	95
3.43	UV-visible spectra of (a) PANI 1:1.25, (b) PANI 1:1.25+0.5% TiO ₂ /CTAB and (c) PANI 1:1.25+1% TiO ₂ /CTAB	95
3.44	XRD patterns of (a) TiO ₂ nanowires (I), (b) PANI 1:1.25, (c) PANI 1:1.25+0.5% TiO ₂ , (d) PANI 1:1.25+1% TiO ₂ and (e) PANI 1:1.25+2% TiO ₂	97
3.45	TGA curve of (a) PANI 1:1.25 and (b) PANI 1:1.25 + 0.5% TiO ₂ nanocomposite	98
3.46	DSC thermogram of (a) PANI 1:1.25 and (b) PANI+ 0.5% TiO ₂ nanocomposite	99
3.47	Photos from (a) to (e) illustrate preparation progress of PANI-PVA blend by in situ chemical oxidative polymerization of aniline with APS oxidant in aqueous HCl medium in presence of PVA and (f)	104

	shows the formed PANI-PVA blend film	
3.48	Schematic representation of the preparation of PANI films by spin coating or drop casting technique	104
3.49	Photographic images of various PANI films doped with CSA and spin coated on different substrates (A) PVA and (B) PET	108
3.50	UV-visible spectra of (a) Pure PVA sheet and from (b) to (f) are PANI films with different layers number.	109
3.51	UV-visible spectra of (a) Pure PET sheet and from (b) to (f) are PANI films with different layers number on PET sheet	110
3.52	Transmission spectra of PANI films with different layers on PVA sheet	111
3.53	Transmission spectra of PANI films with different layers on PET sheet	111
3.54	Transmittance at 495 nm and sheet resistance for PANI films of various number of layers on PVA substrate	112
3.55	Transmittance at 495 nm and sheet resistance for PANI films of various number of layers on PET substrate	113
3.56	XRD pattern of PANI film	113
3.67	Photocurrent response of LBL film	115
