**Population Demography and Dynamics of *Acacia tortilis*
in South Sinai**

Thesis Submitted in partial Fulfillment for the requirement
of the Degree of Master of Science in Botany

(Plant Ecology)

By

Mohamed El Sayed Abdel Fatah M. Elhag

B.Sc. (Botany)

Cairo University (1999)

Supervised by

Dr. Ahmad K. Hegazy

Prof. of plant ecology

&

Dr. Nadia El Sawaf

Prof. of plant ecology

Botany Department

Faculty of Science

Cairo University

(2008)

B

117-C

Approval sheet

Title of the M.Sc. thesis

**Population Demography and Dynamics of *Acacia tortilis*
in South Sinai**

Name of candidate

Mohamed El Sayed Abdel Fatah M. Elhag

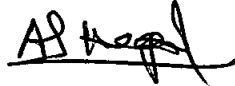

Submitted to

Botany Department, Faculty of Science

Cairo University

Supervision committee:

Prof. Dr. Ahmad K. Hegazy

Professor of Plant Ecology, Faculty of Science, Cairo University

Prof. Dr. Nadia El Sawaf

Professor of Plant Ecology, Faculty of Science, Cairo University

Prof. Dr. Effat Shabana

Head of Botany Department

Faculty of Science, Cairo University

Pre-mater courses

List of course completed by: **Mohamed El Sayed Abdel Fatah M. Elhag** in the partial Fulfillment of the requirement for the Degree of Master of Science in Botany (Plant Ecology),

Department of Botany Faculty of Science, Cairo University

On Oct. 2000

Courses:

1. Water relation
2. Advance plant community
3. Host parasite relationship
4. Environmental science
5. Enzymes
6. Agriculture metrology
7. Plant geography
8. Plant vegetation
9. Bio-statistics
10. Instrumental chemistry
11. German language

Mr. Elhag has attended and passed successfully the post graduate courses as well as the German language exam on Oct. 2000.

Acknowledgements

I thank my supervisor Dr. Ahmad K. Hegazy, Professor of Plant Ecology, Botany Department, Faculty of Science, Cairo University for suggesting the topic and supervising this work. His great encouragement, keen interest, valuable advice, revising the manuscript, and data interpretation are highly appreciated.

I am indebted to Dr. Nadia El Sawaf Professor of Plant Ecology, Botany Department, Faculty of Science, Cairo University for her advices and encouragement.

I am gratitude to Dr. John Grainger, Saint Katherine Protected Area consultant for his ultimate help during the field work of the study.

My thanks also go to R. El Bialy Hatab and R. Tamer Ali Botanist rangers, S. R. Wael Ibraheem and all Saint Katherine Protected Area Staff for their continuous support.

I am grateful to Dr. Hanan F. Kabil, Botany Department, Faculty of Science, Cairo University for her kind revision of some parts of the thesis.

I am thankful to my sincerely wife Dr. Amina Farghal, for her help and facilities offered, without her support this work couldn't be achieved.

My thanks are also due to my colleagues and all staff members of Botany Department, Faculty of Science, Cairo University who offered help in different ways.

Special gratitude: I am indebted to the guidance, advice and encouragement of Prof. M. Kassas, emeritus professor, Botany Department, Faculty of Science, Cairo University. His constant support is highly appreciated.

Dedication

To my sincere family,

Especially to my great mother soul,

*Asking my lord to let her rests in fields of green grass and
led her to quit pool of fresh water, gives her new strength,
and guide her in the light passed as he promised*

Amen

List of Figures

Number	Title	Page
Figure 2.1	Climatic diagram of Sharm El Sheikh weather station which is close to the study area. Data is average of 10 years from 1995 – 2005.	12
Figure 3.1	Age, canopy volume classes and stem circumference relationships in the study population of <i>A. tortilis</i>	20
Figure 3.2	Volume class distribution in the six study populations. Volume classes are: A= < 1 m ³ , B= 1 - 10 m ³ , C= 10 - 50 m ³ , D= 50 - 100 m ³ , E= 100 - 200 m ³ and F > 200 m ³	20
Figure 3.3	Monthly phenological monitoring of <i>A. tortilis</i> growing branches observed during one year of growth.	21
Figure 3.4	Percentage of phenophases of <i>A. tortilis</i> population during one year of growth.	21
Figure 3.5	Survivorship curve (log scale) of <i>A. tortilis</i> population.	24
Figure 3.6	Expectation of future life (e_x) of <i>A. tortilis</i> population.	24
Figure 3.7	Age specific reproductive value (V_x) of <i>A. tortilis</i> population.	25
Figure 4.1	The Relative growth rate RGR of seedlings root and shoot (mg g ⁻¹ day ⁻¹) (a, b) and Net assimilation rate (NAR) (mg mm ⁻² day ⁻¹) (c) <i>Acacia tortilis</i> raised under different water treatments equivalent to 100, 200, 400 and 800 mm rainfall.	39
Figure 4.2	Dry phytomass allocation of seedlings of <i>Acacia tortilis</i> raised under different water treatments equivalent to 100, 200, 400 and 800 mm rainfall.	41
Figure 4.3	Root-Shoot ratios on dry weight bases (a), length (b) and volume (c) of <i>Acacia tortilis</i> raised under different water treatments equivalent to 100, 200, 400 and 800 mm rainfall.	44
Figure 4.4	Succulence ratio of seedlings of <i>Acacia tortilis</i> raised under different water treatments equivalent to 100, 200, 400 and 800 mm rainfall.	45
Figure 5.1	Germinated seeds from protected and non-protected patches of <i>Acacia</i> trees understory in soil sample volume (0.25 m ³). Species abbreviation: <i>Ac to</i> = <i>Acacia tortilis</i> , <i>As sp</i> = <i>Astragalus spinosus</i> , <i>Ba er</i> = <i>Bassia eriophora</i> , <i>Ca pr</i> = <i>Calotropis procera</i> , <i>Ci co</i> = <i>Citrullus colocynthis</i> , <i>Cl dr</i> = <i>Cleome droserifolia</i> , <i>Fa mo</i> = <i>Fagonia mollios</i> , <i>Ip sc</i> = <i>Iphiona scabra</i> , <i>Ly sh</i> = <i>Lycium shawii</i> , <i>Pa tu</i> = <i>Panicum turgidum</i> , <i>Se it</i> = <i>Senna italica</i> , <i>So ar</i> = <i>Solenstemma argel</i> , <i>Sc pu</i> = <i>Schouwia purpurea</i> , <i>Te pu</i> = <i>Tephrosia purpurea</i> and <i>Zilla spinosa</i>	55
Figure 5.2	Contribution percentage of soil seed bank in protected <i>Acacia tortilis</i> understory of different crown size classes. Understory classes are: A= < 1 m ³ , B= 1 - 10 m ³ , C= 10 - 50 m ³ , D= 50 - 100 m ³ , E= 100 - 200 m ³ and F > 200 m ³	56
Figure 5.3	Cluster analysis and dendrogram of protected <i>Acacia</i> trees understory seed bank classes. Clustering history for distance separation of the understory area classes.	57
Figure 5.4	Contribution percentage of soil seed bank in non-protected <i>Acacia tortilis</i> understory of different crown size classes. Understory classes are: A= < 1 m ³ , B= 1 - 10 m ³ , C= 10 - 50 m ³ , D= 50 - 100 m ³ , E= 100 - 200 m ³ and	

	F > 200 m ³ . See Figure 5.1 for species abbreviation.	59
Figure 5.5	Cluster analysis and dendrogram of non-protected <i>Acacia</i> trees understory seed bank classes. Clustering history for distance separation of the understory area classes.	60
Figure 5.6	Match Pairs of protected and non-protected understory classes of <i>A.</i> <i>tortilis</i> vegetation patches.	61

Table of Contents

Title	Page No.
Chapter I, Introduction	
1.1 General introduction	01
1.2 Aim of The Study	05
References	06
Chapter II, Study area	
2.1 Location	08
2.2 Geomorphology	08
2.3 Geology	08
2.4 Hydrology	10
2.5 Climate	11
2.6 Soil	11
References	13
Chapter III, Demography, Phenology and Life Table Analysis	
3.1 Abstract	14
3.2 Introduction	14
3.3 Materials and Methods	15
3.3.1 <i>Study area and plant populations.</i>	15
3.3.2 <i>Population demography.</i>	16
3.3.3 <i>Phenology</i>	17
3.3.4 <i>Life table and fecundity schedule</i>	17
3.4 Results	18
3.4.1 <i>Population demography.</i>	18
3.4.2 <i>Phenology.</i>	19
3.4.3 <i>Life table and fecundity schedule</i>	22

3.5 Discussion	26
3.5.1 Population demography.....	26
3.5.2 Phenology.....	26
3.5.3 Life table and fecundity schedule	27
3.6 Conservation consideration	28
References	30

Chapter IV, Variation of Growth and Functional Ratios

4.1 Abstract	33
4.2 Introduction	33
4.3 Materials and Methods	34
4.3.1 Growth and dry phytomass allocation.....	35
4.3.2 Functional rations and succulence.....	36
4.3.3 Statistical analysis.....	36
4.4 Results	36
4.4.1 Growth and dry phytomass allocation.....	36
4.4.2 Functional rations and succulence.....	42
4.5 Discussion	46
References	48

Chapter V, Effect of *Acacia tortilis* Understory on Soil Seed bank

5.1 Abstract	51
5.2 Introduction	51
5.3 Materials and Methods	53
5.3.1 Study area.....	53
5.3.2 Seed bank.....	53
5.4 Results	54
5.5 Discussion.....	62
References.....	64

Chapter VI, General Conclusions	
General Conclusions.	67
Conservation consideration	68
Chapter VII, Summary	
Summary	70
Arabic summary	72
Appendixes.	73
