

**Microbiological and molecular studies on
Fusarium rot disease of maize plants**

Thesis

**Submitted in partial fulfillment of the requirements of the
degree of Ph.D. in Microbiology
(Microbiology)**

BY

Peter Farag Fouad Aziz
(B.Sc. Microbiology, 2008)
(M.Sc. Microbiology, 2013)

Supervisors

Dr. Khyreia Abd El-Ghany Youssef

Professor of Microbiology, Microbiology
Department, Faculty of Science,
Ain Shams University

Dr. Naziha Mohamed Hassanein

Professor of Mycology and Plant pathology,
Microbiology Department, Faculty of
Science, Ain Shams University.

Dr. Lobna Abd El-Aziz Ahmed Moussa

Professor of Microbiology, Microbiology Department,
Agriculture Research Center.

Department of Microbiology

Faculty of Science

Ain Shams University

(2016)

ACKNOWLEDGEMENT

First and foremost, I feel always indebted to Allah, the most beneficent and merciful. I can do nothing without Him

*I would like to express my deep gratitude and thanks to my dear supervisor Dr. **Naziha Mohamed Hassanein**, Professor of Mycology and Plant pathology, Department of Microbiology, Ain shams university, for her help, encouragement, continuous advice and her expert supervision to bring this thesis to more than satisfactory finish. She always patient, perfect in work organization and the best advisor. I am proud to be one of her students and I hope that she is satisfied with me.*

*A great thanks to Dr. **Khairia Abd El-Ghany Youssef**, professor of Microbiology, Department of Microbiology, Faculty of Science, Ain shams university for her supervision, support, encouragement, valuable advices and constant help.*

*A great thanks to Dr. **Lobna Abd El-Aziz Ahmed Moussa**, professor of Microbiology, Agriculture research center for her supervision, support, encouragement, valuable advices and constant help.*

*A deep thank to **Microbiology Department** and all my Colleagues in microbiology department for their assistance, support and for providing a suitable environment during my work,*

Approval sheet

Microbiological and molecular studies on *Fusarium* rot disease of maize plants

By

Peter Farag Fouad Aziz

M.Sc. Microbiology, Faculty of Science,
Ain Shams University, 2013

Supervisors

Prof. Dr. Khayreia Abd El-Ghany

Professor of Microbiology,
Faculty of Science,
Ain Shams University.

Prof. Dr. Naziha Mohamed Hassanein

Professor of Microbiology,
Faculty of Science,
Ain Shams University.

Prof. Dr. Lobna abd El-Aziz Moussa

Professor of Microbiology,
Agriculture Research Center.

Approved

Examination committee

Prof. Dr. Ahmed Ibrahim El-Dewany

Professor of nature products of chemistry
National Research Center.

Prof. Dr. Nahed Samy Youssef

Professor of food Microbiology
Faculty of Home Economics,
Azhar University.

Prof. Dr. Naziha Mohamed Hassanein

Professor of Microbiology,
Microbiology Department,
Faculty of Science, Ain Shams University.

Date of examination 22 / 10/ 2016

Approval date / /

University Council approved / /

Abstract	
Chapter I: Introduction.....	1
Chapter II: Review of literature	
1. Maize.....	6
1.1 Introduction.....	6
1.2 Maize in Egypt.....	7
1.2.1 Cultivation of Egyptian maize.....	8
1.2.2 Varieties of Egyptian maize.....	9
1.3 Taxonomy.....	9
1.4 Description of maize plant.....	10
1.5 Economic importance.....	11
2. <i>Fusarium</i> spp.....	12
2.1 Introduction.....	12
2.2 Growth of <i>Fusarium</i> species.....	13
2.3 Morphological characters.....	15
2.4 Taxonomy of <i>Fusarium</i>	16
2.4.1 Conventional taxonomic identification base on morphology	16
2.4.2 Molecular Taxonomy of <i>Fusarium</i>	17
3. <i>Fusarium</i> infections of maize.....	20
3.1 Introduction.....	20
3.2 Factors affecting the infection of maize by <i>Fusarium</i> species....	21
3.3 Symptoms and epidemiology of <i>Fusarium</i> diseases in maize.....	22
3.3.1 <i>Fusarium</i> ear rot.....	22
3.3.2 <i>Fusarium</i> stalk rot	23
3.3.3 <i>Fusarium</i> root rot.....	24
4. <i>Fusarium</i> virulence factors (Pathogenesis).....	25
4.1 Infection structures of phytopathogenic fungi.....	25
4.2 Infection structures of <i>Fusarium</i>	27
4.3 Cell wall degrading enzymes (CWDE).....	28

4.3.1 Cellulose-Degrading Enzymes.....	29
4.3.2 Hemicellulose-degrading enzymes.....	32
4.3.3 Pectin-degrading enzymes.....	34
4.3.4 Lignin-degrading enzymes.....	36
4.3.5 Other degrading enzymes.....	37
4.3.5.1 Amylases.....	37
4.3.5.2 Proteases.....	38
4.3.5.3 Esterases.....	38
4.4 Mycotoxins produced by <i>Fusarium</i> spp.....	39
4.4.1 Fumonisin (FUM).....	39
4.4.2 Zearalenone (ZEA).....	40
4.4.3 Trichothecenes (TRI).....	41
4.4.4 Beauvericin (BEA).....	42
4.4.5 Moniliformin (MON).....	43
5. Techniques used for pathogenicity detection.....	43
5.1 Electron microscope.....	43
5.2 Green fluorescent protein (GFP).....	45
 Chapter III: Materials and Methods	
1. Analytical properties of soil.....	47
2. Isolation and identification of <i>Fusarium</i> spp. from maize plants...	47
2.1 Isolation of <i>Fusarium</i> from maize plants.....	47
2.2 Identification of <i>Fusarium</i> spp. isolated from maize plants.....	48
2.2.1 Morphological identification.....	48
2.2.2 Molecular identification.....	48
2.2.2.1 DNA extraction.....	48
2.2.2.2 Determination of DNA yield and purity.....	50
2.2.2.3 PCR amplification and sequencing of the translation elongation factor 1 alpha (TEF1 α) region.....	50
3. Pathogenicity tests.....	51
3.1 Preparation of fungal inoculum for cultivation.....	51
3.2 Preparation of seeds and pot treatments.....	52
3.3 Disease assessment, data collection and analysis.....	53
3.3.1 Disease incidence rating.....	53
3.3.2 Maize growth assessment.....	54
3.3.3 Scoring of disease severity.....	54
3.3.4 Isolation and identification of <i>Fusarium</i> spp. from maize plants.....	55
3.4 Petri-dish test.....	55
4. <i>In vitro</i> qualitative and quantitative analysis of cell wall degrading enzymes (CWDE).....	57

4.1 Qualitative analysis of cellulase, xylanase, pectinase, lipase, amylase and protease.....	57
4.1.1 Plate assay method.....	57
4.1.2 Well diffusion method.....	58
4.2 Quantitative estimation of cellulase, xylanase and pectinase activity of the tested <i>Fusarium</i> spp.....	59
5. <i>In vitro</i> quantitative analysis of <i>Fusarium</i> mycotoxins by HPLC...	62
5.1 Culturing of <i>Fusarium</i> isolates for toxin production.....	62
5.2 Toxin extraction from <i>Fusarium</i> solid culture.....	63
5.3 HPLC analysis.....	63
6. Scanning electron microscopy of invasion process.....	64
6.1 Inocula preparation.....	64
6.2 Seed inoculation.....	65
6.3 Scanning electron microscope observations.....	65
7. Analysis of endoglucanase gene (<i>EG</i>) and fumonisin gene (<i>FUM</i>) of <i>F. verticillioides</i> using green fluorescence protein (GFP) marker gene marker gene.....	65
7.1 plasmid used for transformation.....	65
7.2 <i>FUM</i> gene and <i>EG</i> gene amplification from <i>F. verticillioides</i> ...	66
7.2.1 RNA isolation from <i>F. verticillioides</i>	66
7.2.2 Preparation of cDNA from isolated RNA.....	67
7.3 Restriction digestion of DNA.....	69
7.4 Ligation of the genes into plasmid.....	69
7.5 Transformation of recombinant plasmid into <i>F. verticillioides</i> ...	70
7.6 Maize kernels inoculation by mutant-type <i>F. verticillioides</i>	72
8. Media used.....	72
8.1 Isolation media.....	72
8.2 Identification media.....	73
8.3 Media used in enzymes assay.....	74
9. Statistical analysis.....	76
 Chapter IV: Results	
1. Analytical properties of soil.....	77
2. Isolation and identification of <i>Fusarium</i> spp. from maize plants....	78
2.1 Isolation of <i>Fusarium</i> from maize plants.....	78
2.2 Identification of <i>Fusarium</i> spp. isolated from maize plants.....	82
2.2.1 Morphological identification.....	82
2.2.2 Molecular identification.....	82
3. Pathogenicity tests.....	92
3.1 Pathogenicity of <i>Fusarium</i> species on root rot of maize seedlings.....	92

3.2 Pathogenicity of <i>Fusarium</i> species on stalk rot of maize plant.....	96
3.3 Pathogenicity of <i>Fusarium</i> species on leaves of maize plant.....	100
3.4 Pathogenicity of <i>Fusarium</i> species on kernels (ear) rot of maize plant.....	104
3.5 Effect of <i>Fusarium</i> species on some growth parameters of maize plants.....	109
4. <i>In vitro</i> qualitative and quantitative analysis of cell wall degrading enzymes (CWDE).....	123
4.1 Qualitative analysis of CWDE.....	123
4.1.1 Plate assay method.....	123
4.1.2 Well diffusion method.....	130
4.2 Quantitative estimation of cellulase, xylanase and pectinase activity of the tested <i>Fusarium</i> at variable periods.....	137
5. <i>In vitro</i> quantitative analysis of <i>Fusarium</i> mycotoxins by HPLC.	145
6. Scanning electron microscopy of invasion process by the <i>Fusarium</i> species.....	149
7. Analysis of endoglucanase (<i>EG</i> gene) and fumonisin (<i>FUM</i> gene) of <i>F. verticillioides</i> using green fluorescence protein (GFP) marker gene.....	159
7.1 Screening of endoglucanase and fumonisin induction.....	159
7.2 Colonization of maize kernels by mutant-type of <i>F. verticillioides</i>	161
Chapter V: Discussion.....	165
Chapter VI: Summary.....	184
Chapter VII: References.....	188
Arabic summary
