**HANAA ALY**

# **Comparing the Diagnostic Efficacy of Digital Breast Tomosynthesis with Full Field Digital Mammography Using BI-RADS Scoring.**

*A Thesis*

Submitted for the Partial Fulfilment of the Requirements of the Doctorate Degree in Radiology

*Presented by*

**Rana Mamdouh Naeim Tolba**

M.B., B. Ch., M. Sc

Faculty of Medicine - Ain Shams University

*Under supervision of*

**Prof. Dr. Rania Aly Marouf**

Professor of Radiology

Faculty of Medicine - Ain Shams University

**Dr. Merhan Ahmed Nasr**

Lecturer of Radiology

Faculty of Medicine - Ain Shams University

**Dr. Marwa El Sayed Abd El-Rahman**

Lecturer of Radiology

Faculty of Medicine - Ain Shams University

*Faculty of Medicine Ain Shams University 2021*

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

# قَالَ مَوْلَا

لَسْبَبًا إِنَّكَ لَا تَعْلَمُ لَنَا  
إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ  
الْعَلِيمُ الْعَظِيمُ

صدق الله العظيم

سورة البقرة الآية: ٢٢

## Acknowledgement

*First and foremost, my deep gratefulness and indebtedness is to Allah, the Most Gracious and the Most Merciful.*

*I would like to express my deepest appreciation and respect to Prof, Dr. Rania Aly Marouf Professor of Radiodiagnosis, Faculty of Medicine- Ain Shams University, for her generous guidance and patience.*

*I am grateful to Dr. Merhan Ahmed Nasr Lecture of Radiodiagnosis, Faculty of Medicine- Ain Shams University, for her effort and patiency.*

*My deep appreciation to Dr. Marwa El.Sayed Abd El-Rahman, Lecturer of Radiodiagnosis, Faculty of medicine-Ain Shams University, for her sincere guidance and great effort during this study.*

*Lastly and not least, I send my deepest love to my family for their love and care.*

---

*Rana Mamdouh*

## *LIST OF ABBREVIATIONS*

<b>FFDM</b>	Full-field digital mammography
<b>BIRADS</b>	Breast imaging reporting and data system
<b>DBT</b>	Digital breast tomosynthesis
<b>TDLU</b>	Terminal ductal-lobular unit
<b>AMF</b>	Anterior mammary fascia
<b>PMF</b>	Posterior mammary fascia
<b>ASL</b>	Anterior suspensory ligament
<b>HPL</b>	Human placental lactogen
<b>IGM</b>	Idiopathic granulomatous mastitis
<b>IDP</b>	Intraductal papilloma
<b>DCIS</b>	Ductal carcinoma in situ
<b>RR</b>	Relative risk
<b>LCIS</b>	Lobular Carcinoma in Situ
<b>IDC</b>	Invasive ductal carcinoma
<b>NOS</b>	Not otherwise specified
<b>NST</b>	No special type

---

<b>EIC</b>	Extensive intraductal carcinoma
<b>AJCC</b>	American Joint Commission on Cancer
<b>IUCC</b>	International Union for Cancer Control
<b>CC</b>	Craniocaudal
<b>DBT</b>	Digital breast tomosynthesis
<b>FFDM</b>	Full field digital mammography
<b>MLO</b>	Mediolateral oblique
<b>SM</b>	Synthetic mammography
<b>FDA</b>	Food and Drug Administration
<b>DM</b>	Digital mammography
<b>ACR</b>	American College of Radiology

## INTRODUCTION

Breast cancer incidence rates have increased by 20% with a possible increase of diagnosis before the age of 50. The pursuit of accurate and cost-effective ways to diagnose breast cancer early remains of interest. *(Siegel et al, 2013)*

Cancer care has become more individualized for our patients, and thus, better characterization for treatment planning is required. Imaging examination plays an important tool in cancer detection & diagnosis and determination the response to therapy. *(Jae-Hun et al, 2017)*

Screening mammography has long been considered as the primary technique in breast cancer detection and assessment. It is considered the most important screening tool for breast cancer. Reduction in mortality among age group of 40 years of age or older caused by breast cancer has been seen in various studies where screening mammography was used. *(Tabar et al, 2011)*

Initially, screen film mammography was done and was the standard technique in breast cancer screening for many years, but today the most common imaging procedure ,gradually replacing film screen ,is a two-view examination (medio-lateral oblique and cranio-caudal) using full-field digital mammography (FFDM). Searching for any mass, architectural distortion, or calcification, and then accordingly give BIRADS score (Breast imaging reporting and data system). *(Lewin et al, 2007)*

Nevertheless, mammography suffers from several limitations, primarily due to reduced contrast between tumors and surrounding tissue. Especially in dense breasts, this can lead to a decrease in sensitivity and additional imaging methods are necessary. *(Emaus et al, 2015)*

Advances in full-field digital mammography (FFDM) led to the
