17-90

**ASSESSMENT OF THE PROLIFERATIVE
ACTIVITY OF ORAL MUCOSAL TISSUES OF
EXPERIMENTAL RATS RECEIVING
RADIOTHERAPY FOLLOWING CO₂ LASER
THERAPY BY IMMUNOHISTOCHEMICAL
AND HISTOPATHOLOGICAL STUDIES**

Ph.D. Thesis

**Submitted to
The National Institute of Laser
Enhanced Science
Cairo University**

**By
Tarek Mohamed Ibrahim Ahmed
B.D.S, M.D.S. (Cairo University)**

2002

SUPERVISORS

Prof. Dr. Mouchira Salah El-Din

Professor of Oral Medicine,
Peridontology, Oral Diagnosis and Radiology
Faculty of Oral and Dental Medicine,
Cairo University.

Prof. Dr. Sami El-Badawy

Professor of Radiotherapy,
National Cancer Institute,
Cairo University

Prof. Dr. Salwa Ibrahim El-Hadad

Professor of Pathology,
Faculty of Medicine,
Ain-Shams University

Dedication

*Dedicated to my beloved parents,
My loving wife and to my small children
who were too young to understand why I am too busy*

ACKNOWLEDGEMENT

*First of all, I have to thank **GOD** for everything who paved the way for me to complete this thesis and only by his will everything can be achieved.*

*I am indebted and grateful to **Prof. Dr. Lotfia El-Nady**, Professor of Physics, Faculty of Science, Cairo University, a pioneer in the field of laser researches. I owe her a lot of gratitude and thanks. Without her, I would not have entered the field of laser research. She will never be forgotten and her support will always be remembered.*

*I would like to express my sincere and deepest gratitude to **Prof. Dr. Mouchira Salah El-Din**, Professor of Oral Medicine, Peridontology, Oral Medicine and Oral Radiology, Faculty of Oral and Dental Medicine, Cairo University, who freely gave her time and experience for guiding and teaching me through this work, many thanks are sent to her for her continuous encouragement, valuable orientation supervision and superb devotion.*

*Words could never completely express my appreciation to **Prof. Dr. Sami El-Badawy**, Professor of Radiotherapy, National Cancer Institute, Cairo University, for his great help, scientific supervision, valuable advice and effort and for his guidance and support throughout this study.*

My deepest gratitude is extended to Prof. Dr. Salwa Ibrahim El-Hadad, Professor of Pathology, Faculty of Medicine, Ain-Shams University, for her very kind effort and support, for being so much understanding and co-operative during this work and for being a great support for me throughout these investigations.

I am also grateful to Prof. Dr. Adel Salah El-Geheni, Professor of Quality Control in Textile Department, Faculty of Engineering, Alexandria University, for his brilliant work in statistics and data analysis.

I am also grateful to all the staff members and technicians of Pathology Department, Faculty of Medicine and Radiotherapy Department, National Cancer Institute, Cairo University, for their great help, valuable discussions and continuous efforts in providing the facilities necessary to produce this work.

LIST OF FIGURES

Fig. No.		Page
1	Energy level diagram representing an atom in a lasant.	8
2	Processes of atomic transitions: Stimulated absorption, spontaneous emission, and stimulated emission	10
3	Stimulated emission	11
4	The fundamental components of a laser	11
5	A schematic of optical feedback in the laser chamber...	13
6	Diagram showing the light reflection between the two mirrors M_1 and M_2	15
7	The electromagnetic radiation spectrum. Er : YAG and CO_2 lasers emit in the infrared (nonionizing) portion of the spectrum.....	19
8	Diagram show the differencebetween A) Light emitted from a conventional lamp. B) Light emitted from a laser..	19
9	Temporal behavioral of laser output during several modes of operation.....	25
10	Laser-tissue interactions.....	33
11	Absorption characteristics of major soft tissue components	33
12	Zones of thermal damage	34
13	Comparison of the carbon dioxide laser with other popular surgical lasers relating depth of penetration with wavelength	48
14	The effect of the power density and using focused versus defocused modes. In this case, the carbon dioxide laser is presented	50
15	Diagram of different effects of CO_2 and Nd:YAG laser on the same type of oral soft tissue	54
16	Theratron 780 C (Radiotherapy Machine)	113
17	CO_2 Laser System (Surgilase 20 X J)	115
18	Detection of biopsy site	116
19	Excision of the tissues by the CO_2 Laser	116
20	Image analyzer configuration [CAS 200 TM Image Analysis System inc. Distributed by KEMET]	122
21	Leica Software System	122
22	A copy of display seen on the monitor's screen of the image analyzer showing a field exhibiting Ki-67 positive nuclear reaction in oral mucosal cells	123

Fig. No.		Page
23	A copy of display seen on the monitor's screen of the image analyzer showing a field exhibiting Ki-67 positive nuclear reaction in oral mucosal cells after being masked by a blue binary color using the software of the Leica Computer System	124
24	A copy of display seen on the monitor's screen of the image analyzer showing a field exhibiting Ki-67 positive nuclear reaction after being transformed into a grey image by the Leica Computer Software in oral mucosal cells	125
25	A copy of display seen on the monitor's screen of the image analyzer showing a field exhibiting Ki-67 positive nuclear reaction in oral mucosal cells after being transformed into a grey image and then being masked by a blue binary color using the software of the Leica Computer System	126
26	Immediate scalpel changes. Note the minimal infiltration of inflammatory cells with intact surface epithelium [(H & E) x 200]	131
27	Scalpel healing (1 st week): It shows moderate inflammatory infiltrate and moderate vascular capillaries with intact covering epithelium [(H & E) x 200]	131
28	Scalpel Healing (2 nd week): It shows hyperplastic covering epithelium and infiltrate of subepithelial layer by inflammatory cells and fibroblasts. [(H & E) x 200].	132
29	Scalpel healing (3 rd week): It shows intact covering epithelium with heavy infiltrate of inflammatory cells. [(H & E) x 200]	132
30	Scalpel healing (3 rd week): Note the effect of radiation on the appearance of epithelial cells with areas of necrosis. Notice bizzare shaped cells. [(H & E) x 200] .	134
31	Immediate laser effect: Few inflammatory cell infiltrate with areas of haemorrhage. [(H & E) x 200] ..	134
32	Laser healing (1 st week): It shows marked cellular inflammatory cell infiltrate. [(H & E) x 200]	135
33	Laser healing (2 nd week): It shows intact hyperplastic covering epithelium with basal cell hyperplasia. Inflammatory cells infiltrate within subepithelial layer. [(H & E) x 200]	135
