<b>Summary</b>	

## Acknowledgment

- This work is successfully carried out with the appreciated and faithful aid of my Professors in Sanitary and environmental Engineering (Faculty of Engineering – Cairo University) especially his Excellency Prof. Dr. Mohammad I. Sadawi, his Excellency Dr. Khaled Z. Abd Allah, his Excellency Prof. Dr. Ezzat Abd ELShafy Head of Sanitary and Environmental Engineering and all Staff of Sanitary & Environmental Engineering . Also a special dedication to Prof. Dr. Hamdy I. Ali professor of Sanitary and Environmental Engineering (Faculty of Engineering – Ain Shams University).

I dedicate this work to my parents and my fiancée who supported me to direct this thesis in an honorable and perfect way. Also I never forget the important assistance from the Management of Misr Company for Dairy food industries especially Eng. Mohamed Attfe the company Vice-Chairman and his staff and all labors in the Company.

*Eng. Hossam M. Samir*

## ABSTRACT

- In the dairy industry, processing plants use milk from farms to produce various products including fluid milk, evaporated milk, cultured dairy products such as cheese and frozen dairy products such as ice cream. Water has many uses in dairy processing {i.e. heating, cooling, washing and clean up}. Many plants use more than (4) gallons of water to process each gallon of processed milk. Accordingly, it is important to conserve water and reduce wastes.

- A biological pilot treatment plant composed of two "Up flow- Down flow" anaerobic bioreactors is used to treat the wastewater raised from dairy products processing in the Egyptian Company Mistr Dairy and food Industries at Amiria District- Cairo -Egypt.

-The experimental work takes place in (5) cycles of treatment which are performed with variable hydraulic retention time. Analysis for samples from the bioreactors was carried out to determine the wastewater characteristics "Biological Oxygen Demand (BOD<sub>5</sub>) , Chemical Oxygen Demand (COD), Total Solids (TS) , Volatile Suspended Solids and pH value at several stages of the treatment process. The characteristics of influent and effluent samples are compared to determine the effect of applying the proposed treatment system and therefore the treatment efficiency can be determined. BOD<sub>5</sub> removal percentage ranges from (86% to 89%) ,COD removal percentage ranges from (85.8% to 88.3%), Total Solids (TS) removal percentage ranges from ( 85.5%to 89%) , Volatile Suspended Solids (VSS) removal percentage ranges from (81% to 89.7%) as well as the pH value remains within the range (6.5 to 7.5) throughout the treatment processes.

- Also this research will highlight the role and importance of wastewater management in this industry as well as the important role of applying "Pollution Prevention Program" to minimize the needs for treating wastewater and dairy processing wastewater in specific, as the cost of treating is much higher than the cost of reducing wastes production.

## Contents

	<b>Page No.</b>
<b>1- Chapter ONE: Introduction</b>	<b>1-18</b>
<b>1-1 Environmental impact of industrial wastewater pollution</b>	<b>1</b>
<b>1-2 Statement of Dairy processing wastewater problem</b>	<b>3</b>
<b>1-3 Objectives and legislation of environmental performance</b>	<b>13</b>
<b>1-4 Procedures for pollution control</b>	<b>16</b>
<b>1-5 Objectives of the research</b>	<b>17</b>
<b>1-6 Scope of the Research</b>	<b>17</b>
<b>1-7 Research Organization</b>	<b>18</b>
<b>2- Chapter TWO: Literature Review</b>	<b>19-27</b>
<b>2-1 Introduction</b>	<b>19</b>
<b>2-2 Treatment of dairy process waters by membrane operations         for water reuse and milk constituents concentration.</b>	<b>20</b>
<b>2-3 Biological Treatment of Dairy processing wastewater using         Sequencing Batch Reactors.</b>	<b>21</b>
<b>2-4 Membrane sequencing batch reactor system for the treatment         of dairy industry wastewater.</b>	<b>22</b>
<b>2-5 Filtration Treatment of Dairy processing Wastewater.</b>	<b>23</b>
<b>2-6 Use of Three-Stage aerated lagoons system for treatment and         disposal of dairy plant processing wastes.</b>	<b>24</b>

	Page No.
2-7 Comparison Study on the application of the porous and non porous media in up-flow Anaerobic filters on treating dairy processing wastewater.	25
2-8 Preliminary treatment of Dairy plant wastewater in a ditch which act as a bio-filter.	26
3- Chapter THREE: Case study and Experimental works.	28-49
3-1 Introduction.	28
3-2 Case Study.	29
3-3 Anaerobic Treatment.	36
3-4 Pilot Treatment Plant	41
3-5 Treatment Cycles and Sampling	45
4- Chapter FOUR: Results and Discussion	50-7
4-1 Introduction	50
4-2 Results	51
4-3 Discussion	56
5-Chapter FIVE: Wastewater Management in Dairy Processing Plants.	80-123
5-1 Introduction	80
5-2 Inventory Control measures	80
5-3 Production Process modification	82
5-4 Reducing waste volume methods (Waste minimization)	88
5-5 Recovering Waste	90
5-6 Recycling	93
5-7 Developing & Maintaining a Pollution Prevention Program	93

	<b>Page No.</b>
5-8 Sustaining Cleaner Production	107
5-9 Wastewater Treatment Options	117
<b>6- Chapter (Six): Conclusions and Recommendations</b>	<b>124-133</b>
6-1 Conclusions	124
6-2 Recommendations	126
6-3 Staircase of Concepts & Reduction techniques of wastes leading to Pollution prevention.	128

## List of Tables

	Page No.
• Table (1-1) Composition of common Dairy products processing materials.	7
• Table (1-2) Estimated contribution of wasted materials to the BOD5 load of Dairy wastewater (Fluid milk plant).	8
• Table (1-3) Equivalent waste load of specific milk constituents.	9
• Table (1-4) "Reported (BOD) value for various milk constituents and related constituents in a Dairy processing plant.	9
• Table (1-5) Raw wastewater Characteristics.	10
• Table (1-6) Estimated Range & average composition of dairy factory wastewater	10
• Table (1-7) Effluents from dairy industry.	15
• Table (1-8) The pollutant limits in the industrial wastewater in accordance with the environmental laws in Egypt.	16
• Table (1-9) Procedures of industrial environmental inspection.	17
• Table (3-1) represents the sources of waterborne waste in the dairy processing plant.	36
• Table (3-2) Characteristics and Dimensions of the Bio-Reactors.	44
• Table (3-3) Characteristics of Seeding from Primary Sedimentation tanks of public owned treatment plant.	46
• Table (4-1) Characteristics of Dairy processing Wastewater (Influent).	51
• Table (4-2) Hydraulic retention time (HRT) for each treatment cycle.	52
• Table (4-3) Samples Characteristics for the First Treatment Cycle "Cycle 1".	52
• Table (4-4) Samples Characteristics for the Second Treatment Cycle "Cycle 2".	53
• Table (4-5) Samples Characteristics for the Third Treatment Cycle "Cycle 3".	54
