Appendix (i) showing Pediatric Dentistry Department's Patient assessment chart.

_____ Appendix

Appendix (ii) showing consent form for guardians to sign.

_____ Appendix

Clinical Evaluation								
Point of comparison	Preoperative	1 month	3 months	6 months	9 Months	12 months		
Spontaneous Pain								
Tenderness to								
Percussion								
Abnormal								
Mobility								
Swelling and sinus or fistula								

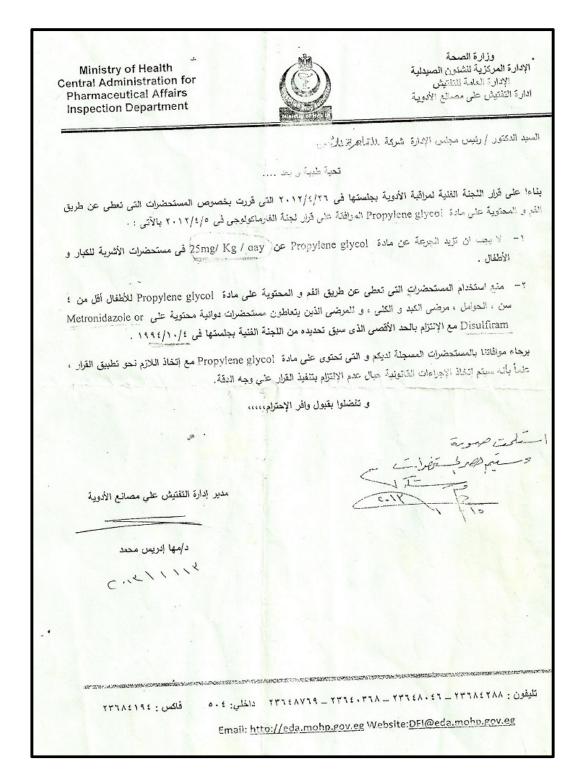

(1)

Radiographic Evaluation							
Point of comparison	Preoperative	6 months	12 months				
Furcation Involvement							
Radicular Pathology							
Root Resorption							
Bone Density measurements at furcation area							

(2)

Appendix (iii) showing tables (1) to record clinical evaluation and (2) to record radiographic evaluation at different follow up periods.

_____ Appendix

Appendix (iv) showing the decision taken from the Inspection Department of Central Administration for Pharmaceutical Affairs, Ministry of Health on 26/4/2012.

Appendix

Arabic Summary

Case Presentations

Case (1) for group I:

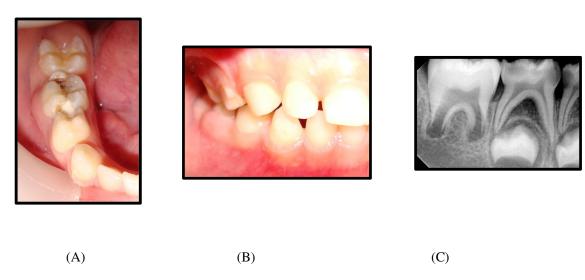

Fig.(42): Photographs (A)and (B) showing preoperative clinical case selection for lower right second primary molar, while photograph (C) showing preoperative radiographic case selection for lower right second primary molar.

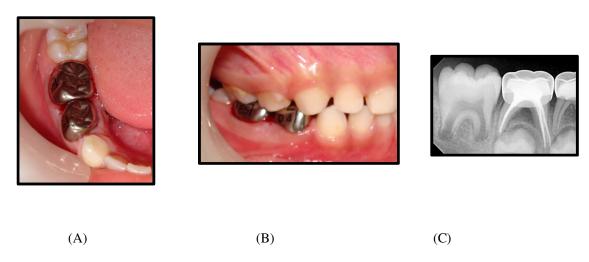

Fig.(43): Photographs (A) and (B) showing final placement of stainless steel crown after one week for lower right second primary molar, while photograph (C) showing final radiographic placement of stainless steel crown after one week for lower right second primary molar.

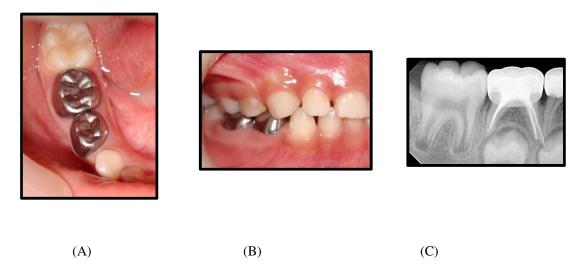

Fig.(44): Photographs (A)and (B) showing clinical evaluation after 6 months for lower right second primary molar, while photograph (C) showing radiographic evaluation after 6 months for lower right second primary molar.

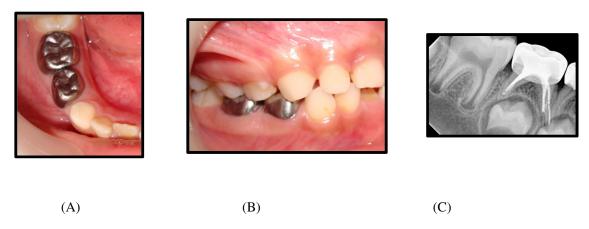

Fig.(45): Photographs (A)and (B) showing clinical evaluation after 12 months for lower right second primary molar, while photograph (C) showing radiographic evaluation after 12 months for lower right second primary molar.

Case (2) for group II:

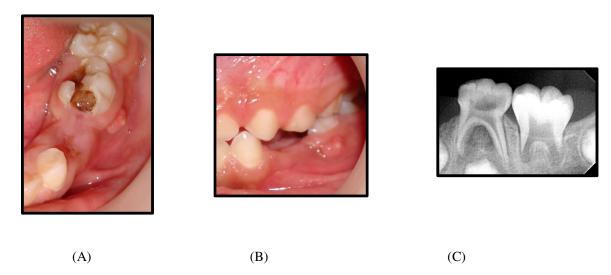

Fig.(46): Photographs (A)and (B) showing preoperative clinical case selection for lower left second primary molar, while photograph (C) showing preoperative radiographic case selection for lower left second primary molar.

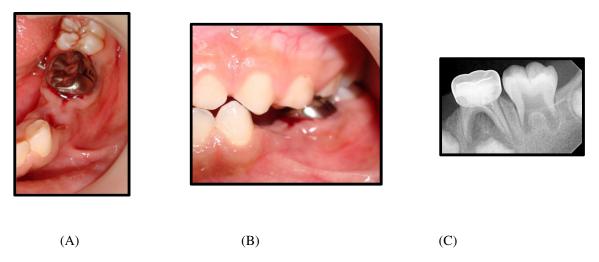

Fig.(47): Photographs (A)and (B) showing final placement of stainless steel crown after one week for lower left second primary molar, while photograph (C) showing final radiographic placement of stainless steel crown after one week for lower left second primary molar.

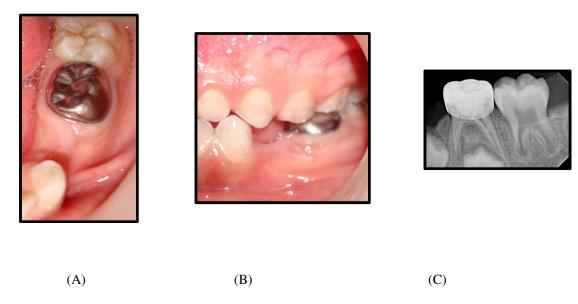

Fig.(48): Photographs (A)and (B) showing clinical evaluation after 6 months for lower left second primary molar, while photograph (C) showing radiographic evaluation after 6 months for lower left second primary molar.

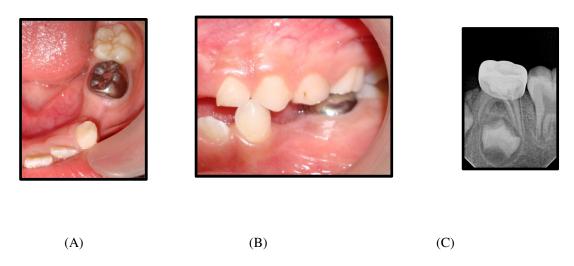

Fig.(49): Photographs (A)and (B) showing clinical evaluation after 12 months for lower left second primary molar, while photograph (C) showing radiographic evaluation after 12 months for lower left second primary molar.

Case (3) for group III:

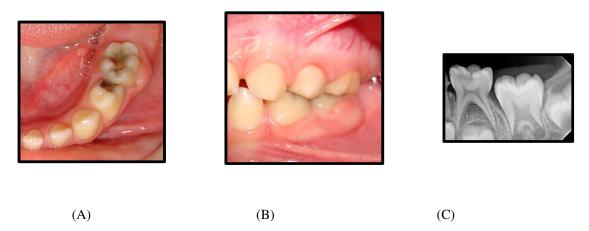

Fig.(50): Photographs (A) and (B) showing preoperative clinical case selection for lower left second primary molar, while photograph (C) showing preoperative radiographic case selection for lower left second primary molar.

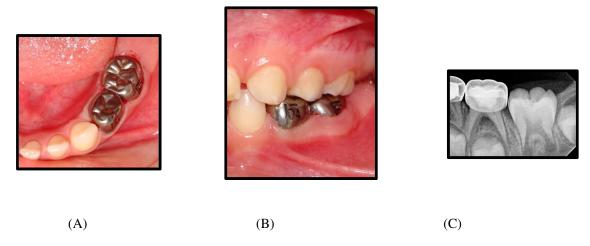

Fig.(51): Photographs (A) and (B) showing final placement of stainless steel crown after one week for lower left second primary molar, while photograph (C) showing final radiographic placement of stainless steel crown after one week for lower left second primary molar.

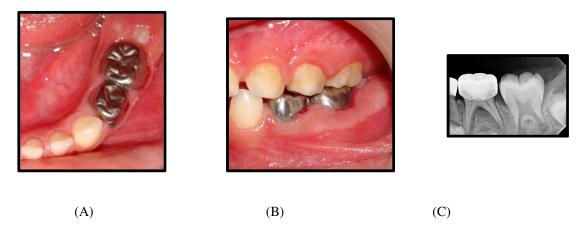

Fig.(52): Photographs (A) and (B) showing clinical evaluation after 6 months for lower left second primary molar, while photograph (C) showing radiographic evaluation after 6 months for lower left second primary molar.

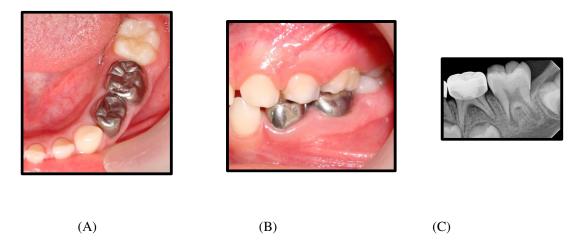

Fig.(53): Photographs (A) and (B) showing clinical evaluation after 12 months for lower left second primary molar, while photograph (C) showing radiographic evaluation after 12 months for lower left second primary molar.
