## **Abstract**

**Intracranial arteriovenous malformations are considered a leading cause for death due to cerebral hemorrhage. Magnificent advent has been achieved concerning the diagnosis and management of intracranial arteriovenous malformations. Microsurgery is still viewed as the base line treatment for these lesions, and radiosurgery deals with a good number of cases specially presurgically and postsurgically.**

**Embolization is considered a growing technique; its role is increasing with the advances in microcatheters and embolic material.**

**The aim of this work is to study the role of embolization technique in the management of intracranial arteriovenous malformations.**

**Key Words:** (intracranial arteriovenous malformations, intracerebral hemorrhage, embolization).

## Acknowledgment

*First and foremost I feel indebted to 'GOD' the most merciful.*

*I wish to express my thanks and appreciation to Prof.Dr. MOHAMED MOSTAFA, professor of radiodiagnosis, Cairo University for his insightful supervision.*

*I wish to express my gratefulness to Dr. AMR NASSEF, lecturer of radiodiagnosis, Cairo University for his remarkable effort, valuable comments and sincere commitment.*

*I'd like to express my thanks also for my senior staff and my colleagues in "Maadi Armed Forces" hospital for their valuable advice and cooperation during the preparation of this work.*

*Finally no words can express the warmth of my feeling to my family for their patience and help.*
