University of Alexandria

Acknowledgement

First of all, I thank ALLAH, the beneficent, the merciful.

I would like to express my sincere thanks to Dr. Mohamed Hisham A. El-Masry, Professor of Microbiology and Molecular Biology, Department of Biotechnology, Institute of Graduate Studies and Research, University of Alexandria, for his great support, guidance, supervision and advice, help during the course of this study and for his devoted time during the revision of the thesis manuscript.

I would like to express my great appreciation to Dr. Mokhtar Ibrahim Yousef, Professor of Environmental Animal Physiology, Department of Environmental Studies, Institute of Graduate Studies and Research, University of Alexandria, for his close supervision during the experimental work, guidance, generous, spirit and useful criticism. In addition, for devoting much of his time and effort in supervising the thesis manuscript.

I would like to express my great thanks to Dr. Medhat Abou Gomaa Haroun, Associate Prof. of Biochemistry, Department of Biotechnology, Institute of Graduate Studies and Research, University of Alexandria, for advice, encouragement, support and his assistance during the practical work and preparation of the manuscript.

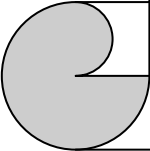

My appreciation is also due to Mrs. Fathia El-Aswad, postgraduate student in Environmental Studies Department, for her great help and support during the course of the experimental work. Thanks to miss Eman Ahmed Ibrahim for her technical assistant.

Dedication

I dedicate this work to my dear mother
for her encouragement and for her great support, for
father and sisters for
their help and understanding
during my study.

Special dedication to my beloved
Husband for his understanding,
patience and great support that he
gave me during the study.

3.7.2. Examination of the sections-----	47
3.8. Statistical analysis-----	47
4. Results and Discussion-----	48
4.1. Blood biochemical parameters-----	48
4.2. Liver biochemical parameters-----	59
4.3. Immunoglobulin G (IgG)-----	66
4.4. Beta-cell examinations using electron microscope-----	70
5. Conclusion-----	75
6. Appendix -----	76
7. References-----	99
Arabic summary-----	

LIST OF TABLES

Table #		Page
1	The major enzymes in liver and their clinical significance	14
2	The composition of pearl barley	32
3	Plasma glucose and enzyme activities of control (C), diabetic (D) and diabetic treated rats with barley (D+B), chromium (D+ Cr), amino Acids (D+AA) and/or their combination (D+ Comb) (Mean± SE).	49
4	Analysis of variance for the effect of barley, chromium, amino acids and/or their combination on plasma glucose, aspartate aminotransferase (AST), alanine aminotransferase (ALT), alkaline phosphatase (ALP), acid phosphatase (ACP) and lactate dehydrogenase (LDH) in diabetic rats.	50
5	Plasma lipid profile of control (C), diabetic (D) and diabetic treated rats with barley (D+B), chromium (D+ Cr), amino acids (D+AA) and/or their combination (D+ Comb) (Mean± SE).	58
6	Analyses of variance for the effect of barley (B), chromium (Cr), amino acids (AA) and/or their combination on plasma total lipids (TL), cholesterol (Chol), triglycerides (TG), high density lipoproteins (HDL-C), low density lipoproteins (LDL-C), and very low density lipoproteins (VLDL-C) in diabetic male rats.	59
7	Liver enzyme activities of control (C), diabetic (D) and diabetic treated rats with barley (D+B), chromium (D+ Cr), amino acids (D+AA) and/or their combination (D+ Comb) (Mean± SE)	67
8	Analysis of variance for the effect of barley (B), chromium (Cr), amino acids (AA) and/or their combination on liver aspartate aminotransferase (AST), alanine aminotransferase (ALT), alkaline phosphatase (ALP), acid phosphatase (ACP) and lactate dehydrogenase (LDH) in diabetic male rats.	68

9	Determination of plasma immunoglobulin G (IgG; microgram/l)) of control (C), diabetic(D), and diabetic male rats treated with barley (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+Comb).	72
10	Analyses of variance for the effect of barley (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+Comb) on plasma Immunoglobulin G (IgG) in diabetic male rats.	72
11	Plasma glucose (mg/dl) of control (C), diabetic (D), and diabetic male rats treated with barley (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb).	81
12	Activity of plasma alanine aminotransferase (ALT; U/L) of control (C), diabetic (D), and diabetic male rats treated with barley (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb).	82
13	Activity of plasma aspartate aminotransferase (AST; U/L) of control (C), diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb).	83
14	Activity of plasma alkaline phosphatase (ALP; U/L) of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb)	84
15	Activity of plasma acid phosphatase (ACP; U/L) of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb)	85
16	Activity of plasma lactate dehydrogenase (LDH; U/L) of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb)	86

- 17** Total lipid (TL; mg/dl) in plasma of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb). **87**
- 18** Triglycerides (TG; mg/dl) in plasma of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb). **88**
- 19** Cholesterol (mg/dl) in plasma of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb). **89**
- 20** Low density lipoprotein (LDL-C; mg/dl) in plasma of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb) **90**
- 21** Very low density lipoprotein cholesterol (VLDL-C; mg/dl) in plasma of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb). **91**
- 22** High density lipoprotein (HDL-C; mg/dl) in plasma of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb) **92**
- 23** Activity of liver alanine aminotransferase (ALT; U/mg protein) of control (C), diabetic (D), and diabetic male rats treated with barley (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb) **93**
- 24** Activity of liver aspartate aminotransferase (AST; U/mg protein) of control (C), diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb) **94**

- 25** Activity of liver alkaline phosphatase (ALP; U/mg protein) of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb). **95**
- 26** Activity of liver acid phosphatase (ACP; U/mg protein) of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb). **96**
- 27** Activity of liver lactate dehydrogenase (LDH; U/mg protein) of control (C),diabetic (D), and diabetic male rats treated with barley water (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+comb) **97**
- 28** Plasma immunoglobulin G (IgG; microgram/l) of control (C), diabetic(D), and diabetic male rats treated with barley (D+B), chromium (D+Cr), amino acids (D+AA) and/or their combination (D+Comb). **98**

LIST OF FIGURES

Figure #		Page
1	The alteration in glucose and ketoacids metabolism	18
2	Structure of cholesterol	20
3	Proposed mechanism for the activation of insulin receptor activity by LMWCr in response to insulin	35
4	Plasma glucose of control (C),diabetic (D), and diabetic male rats treated with barley water (B), chromium (Cr), amino acids (AA) and their combination (comb.)	51
5	Activity of plasma alanine amino transferase (ALT) and aspartate amino transferase (AST) of control (C),diabetic (D), and diabetic male rats treated with barley water (B), chromium (Cr), amino acids (AA) and their combination (comb.)	53
6	Activity of plasma alkaline phosphatase (AlP), acid phosphatase (AcP) and lactate dehydrogenase (LDH) of control (C),diabetic (D), and diabetic male rats treated with barley water (B), chromium (Cr), amino acids (AA) and their combination (comb)	56
7	Total lipids (TL), triglycerides (TG), cholesterol (Chol.) and high density lipoproteins (HDL-C) in control (C),diabetic (D), and diabetic male rats treated with barley water (B), chromium (Cr), amino acids (AA) and their combination (comb)	60
8	Low density lipoproteins (LDL-C) and very low density lipoproteins (VLDL-C) in plasma of control (C),diabetic (D), and diabetic male rats treated with barley water (B), chromium (Cr), amino acids (AA) and their combination (comb.)	61
9	Activity of liver alanine aminotransferase (ALT), aspartate aminotransferase (AST), alkaline phosphatase (AlP) and acid phosphatase (AcP) of control (C), diabetic (D), and diabetic male rats treated with barley (B), chromium (Cr), amino acids (AA) and their combination (comb)	69
10	Activity of liver lactate dehydrogenase (LDH) of control (C),diabetic (D), and diabetic male rats treated with barley water (B), chromium (Cr), amino acids (AA) and their combination (comb)	70
