ABSTRACT

Violence against psychiatric nursing staff has been documented as a serious occupational health concern and safety issues. It is considered the most pressing problem. Although psychiatric violence has long been identified as a clinical problem, it is only in the recent years, that it has become an occupational health hazard-posing particular risk to psychiatric nursing staff. Therefore, the aim of this study was to design, implement an educational / training program and evaluate its effectiveness on psychiatric nurses' skills, knowledge, and attitude in order to help them cope with violence of violent patients. A quasi experimental design was used on the study sample which consisted of 60 nurses in total. Each of the subgroups consisted of 30 nurses. The experimental group was subjected to the developed educational training program and other 30 were considered as a control group. The study was conducted at the inpatient psychiatric mental health departments at Assiut University Hospital and Ministry of Health Mental Health hospital. Sociodemographic data sheet and Violence Assessment Tool (VAT) were developed and used by the investigator. The (VAT) included three main parts related to: assessment of nurses' knowledge of violence and violent patients, nurses' attitude towards violence and assessment of nurses' practical skills to cope and intervene with violence. Results revealed that, nurses who attended to the educational / training program showed significant improvement in their knowledge, attitude and skills. It was recommended that the continued nursing inservice training program should be used as structured nursing intervention to improve nurses knowledge skills and performance in psychiatric settings and their attitude toward violent patients.

ACKNOWLEDGEMENT

ACKNOWLEDGMENT

I am deeply thankful to **ALLAH** by the grace of whom this work was possible.

I would like to express my indebtedness and greet appreciation to *Dr. Nefissa Abdel Kader*, Professor of psychiatric mental health nursing, Faculty of Nursing - Cairo University, for her intensive support, effort, sincere advice, continuous encouragement, generous help and guidance for the fulfillment of this work.

I would like to express my deepest gratitude and appreciation to *Dr. Esam Saad Darwish* Professor of Neurology, Faculty of Medicine, Assiut University, for his kind supervision, continuous encouragement, and advice for the perfection of this work.

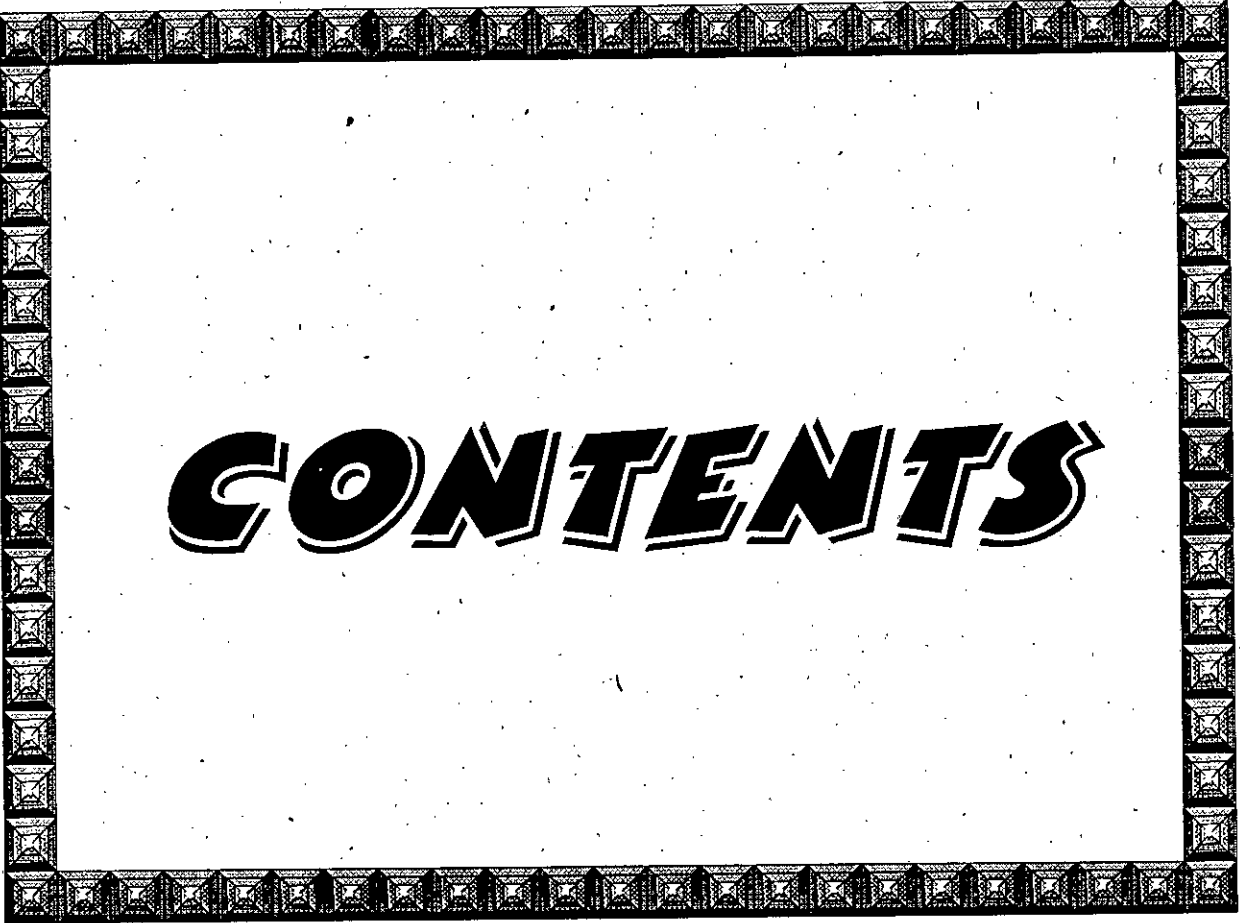

I would like to express my sincere appreciation and deepest gratitude to *Dr. Sawsan Mohamed Alaa Eldien*, Assistant Professor of community mental health nursing, Faculty of Nursing, Assiut University, for her kind supervision, continuous encouragement, and advice for the completion of this work.

I am deeply grateful to my husband, for his tolerance, support, intensive help and advice for completion of this work.

Last but not least, I wish to express indebtedness and appreciation to my parents, brothers and sisters for their continuous encouragement, for their love and kindness.

The candidate

Nadia Ebraheem Sayied
