Ain Shams University
Faculty of Engineering

# Computer Modeling of Insulators In Gas Insulated System (GIS)

M. Sc. Thesis

By

**Eng. El-Said Abd El-Samia El-Bagoury**

B.Sc. Electrical Power Engineering

Submitted in Partial fulfilment of the requirements for the M.Sc. Degree in Electrical Engineering.

Supervised By

**Prof. Dr. Abd El-Razak I. Nosseir**
Faculty of Engineering – Ain Shams University

**Prof. Dr. Abd El-Mohymen M. Soliman**
Faculty of Engineering – Ain Shams University

**Dr. Salem M. El-Khodary**
Faculty of Engineering – Ain Shams University

# Acknowledgment

The author would like to express his thanks to his supervisors for the best supervision and continuous help.

The author is greatly honored to express his science to **Prof. Dr. Abd El-Razak I. Nosseir**, Electrical Power and Machine Department, Faculty of Engineering, Ain Shams University, for his excellent supervision.

The author wishes to express his deep gratitude to **Prof. Dr. Abd El-Mohymen M. Soliman**, Electrical Power and Machine Department, Faculty of Engineering, Ain Shams University, for his continuos support, unfailing discussion, and valuable instructions, his continuos advises was always simulating and especial to complete this work. Really he was not only a supervisor but also a teacher and advisor to my personal live.

He wishes also to express his deep thanks and appreciation to **Dr. Salem M. El-Khodary**, Electrical Power and Machine Department, Faculty of Engineering, Ain Shams University, for his care, continued guidance, and his assistance during this work.

The author wishes to thank Mr. Mohamed El-Sedawy, The Technical of the High voltage laboratory, Ain Shams University for his cooperation and help.

Finally, the author wish to thank all those how help in preparation of this work in its final form.

# CONTENTS

| | Page |
|---|---|
| **Abstract** | ix |
| **List of Abbreviations and Symbols** | xi |
| **List of Figures** | xiii |
| **List of Tables** | xxv |
| **Chapter I : Introduction.** | 1 |
| **Chapter II : Gas Insulated Systems (GIS).** | 7 |
| 2.1. Advantages And Disadvantages of GIS. | 7 |
| 2.2. Properties of $SF_6$ gas. | 9 |
| 2.2.1. Physical properties. | 9 |
| 2.2.2. Chemical properties [11]. | 11 |
| 2.2.3. Electrical properties. | 12 |
| 2.3. Solid Spacer. | 16 |
| 2.4. Factors affecting the breakdown voltage of $SF_6$ | 16 |
| 2.4.1. Effect of pressure on breakdown voltage for $SF_6$ | 16 |
| 2.4.2. Effect of electrode material | 19 |
| 2.4.3. Conductor conditioning effects | 19 |
| 2.4.4. Effect of electrode surface roughness | 20 |
| 2.4.5. Effect of moisture on the break down strength of $SF_6$ | 21 |
| 2.4.6. Particle contamination in GIS | 22 |
| 2.4.7. Conductor coating. | 24 |
| 2.5. Factor affecting flashover voltage of Insulating spacers in GIS. | 25 |
| 2.5.1. Spacer-Conductor-Gas (triple junction) point. | 25 |
| 2.5.2. Spacer - material | 25 |

2.5.3. Spacer Profiles 28
2.5.3.1. Cylindrical Spacer. 28
2.5.3.2. Post Spacer. 28
2.5.3.3. Disc Spacer. 29
2.5.3.4. Conical Spacer. 30
2.5.4. Type of applied voltage. 31
2.5.5. Contamination Effect. 31
2.5.6. Effect of accumulated surface charge. 32
2.6. Possible Locations of Partial Discharges. 33

**Chapter III Numerical Methods For Electric Field Calculations** 37

3.1. Introduction 37
3.2. Finite Difference Method (FDM) 38
3.3. Finite Element Method (FEM) 42
3.4. Monte Carlo Method (MCM) 44
3.5. Charge Simulation Method (CSM) 45
3.5.1. Basic principles 46
3.5.2. Application of CSM to Multi Dielectric Media 48
3.5.3. Application of CSM on Systems with the Accumulated Surface Charge 52

**Chapter IV Modeling of the system under consideration** 55

4.1. Introduction 55
4.2. Considered system configuration 55
4.2.1. Electrode configuration 56

4.2.2. Spacer Configurations 57

4.3. Application of charge simulation technique to the considered GIS configurations 62

4.3.1. Evaluation of the method 63

4.3.2. Accuracy principle 65

4.4. Calculation of the normal and tangential electric field 67

4.5. Computer programs 69

4.5.1. Program I : computation of the potential and electric field distributions along the dielectric interface 70

4.5.2. Program II : Drawing the equipotential and flux lines. 73

**Chapter V Investigation of Different Spacer Configurations** 79

5.1. Introduction 79

5.2. Electric field and potential distributions for plate-to-plate without spacer 80

5.3. Electric field and potential distributions for plate-to-plate electrodes with a cylindrical spacer 86

5.3.1. Accuracy of the simulation 86

5.3.2. Potential and electric field distributions 90

5.3.3. Equipotential and flux lines 90

5.4. Convex spacer of profile (a) 93

5.4.1. The potential distribution along the dielectric-gas interface for different contact angles 93

5.4.2. Effect of the contact angle $\epsilon$ on the electric field distribution 93

5.4.3. Effect of varying maximum radius of insulator (G) on the total electric field distribution 95

5.4.4. Effect of changing spacer materials 95

5.4.5. Effect of varying $H_g$ on the distribution of total electric field 95

5.4.6. Equipotential and flux lines 96
5.5. Convex spacer of profile (b) 101
5.5.1. The potential distribution along the dielectric-gas interface for different contact angles. 101
5.5.2. Effect of the contact angle θ on the electric field distribution 101
5.5.3. Effect of varying maximum radius of insulator (G) on the total electric field distribution 102
5.5.4. Effect of changing spacer materials 103
5.5.5. Effect of varying $H_g$ on the distribution of total electric field 103
5.5.6. Equipotential and flux lines 103
5.6. Convex spacer of profile (c) 108
5.6.1. The potential distribution along the dielectric-gas interface for different contact angles 108
5.6.2. Effect of the contact angle θ on the electric field distribution 108
5.6.3. Effect of varying maximum radius of insulator (G) on the total electric field distribution 109
5.6.4. Effect of changing spacer materials 110
5.6.5. Effect of varying $H_g$ on the distribution of total electric field 110
5.6.6. Equipotential and flux lines 110
5.7. Comments on results of convex spacers 115
5.8. Concave spacer of profile (a) 118
5.8.1. The potential distribution along the dielectric-gas interface for different contact angles 118
5.8.2. Effect of the contact angle θ on the electric field distribution 118
5.8.3. Effect of varying minimum radius of insulator (Y) on the total electric field distribution 119
