Abstract

Wooden icons represent an essential part of Egyptian cultural heritage and have a major historical and artistic significance. This type of icons is to be found in most churches, monasteries and museums, however, historical, archaeometrical and conservation studies have not been carried out to date.

Differences between the wooden icons and the other types of icons are known. The paint layers of the wooden icons are either executed on the wooden panels or on thin gesso layers with the absence of a canvas layer. On the contrary, the other types of icons are applied either on gesso, leather or paper ground layers applied on top of a canvas layer.

Deterioration phenomena of wooden icons are also different. The main aims of this thesis are to study the chemical degradation of the wooden icons due to their specific overlapping structure and to set conservation methodologies which are compatible with their chemical and physical status

The adequate conservation of wooden icons requires good knowledge of the chemistry and deterioration mechanism of objects of complex structure. This knowledge can only be acquired through appropriate analyses of the materials used. Among the available analyses, the suitability of the vibrational spectroscopy and ultraviolet–visible spectroscopy have not yet received full assessment. This dissertation aims to fill up this gap in Egypt

Among the different methods of spectroscopy techniques used for conservation purposes, the application of ultraviolet–visible spectroscopy on composed objects is uncommon, while Raman spectroscopy is usually employed for inorganic materials. It would thus be interesting to test the pertinence of these two methods in the analysis of organic composed samples. The present dissertation proposes to apply them on the protein-based media and other components of wooden icons. Their advantages shall be evaluated, with a view of elaborating the treatments best compatible with wooden icons.

Consolidants

Egg white

Egg yolk

Fluorescence spectroscopy

Fourier transform infrared spectroscopy

Raman Spectroscopy

Ultraviolet–visible spectroscopy

Vibrational spectroscopy

Wooden Icon

DEDICATION

*I praise almighty Allah for giving me
the strength, passion, courage and guidance to achieve this work,
despite all difficulties.*

*I would like to express my profound gratitude
and love to my parents who have supported me
emotionally, organisationally and financially in various ways
throughout the daunting yet entertaining time I have spent with this research.*

Acknowledgements

Above all, I would like to express my deep gratitude to my principal supervisor, Professor Dr. Mona Fouad, for encouraging me to undertake the present research project. I tremendously enjoyed our discussions, her enthusiasm and the easiness with which she shrugged off adversities and gently let me know that they were “also part of becoming a researcher”. My co-supervisor, Dr. Mona Hussien Abdel-Ghani, has certainly been no less fundamental in shaping my work. I am also indebted to my co-supervisor Professor .Dr. Khaled El-Nagar, for his advice and his sense of humour which has lightened up many emails.

Although not formally my supervisor, Dr. Anita Quiles supported me almost as much all the way, and helped me with a wide range of issues. Whenever I needed different approaches, samples and tools for my experiments, she was always there for my research.

My colleagues at IFAO also deserve high praise for welcoming a conservator and treating him as one of them. I have enjoyed my time with all of you immensely. Special thanks to Prof .Dr. Lauren Bavay Director at IFAO, Dr.Beatrix Midant-Reynes-(vice director), Dr.Nicolas Michel director of studies, †Michel Wuttmann vice Former head of Conservation department and C14 dating lab -IFAO, Nadine Monier. Elna Rouchard , Julien Auber,Marie-Lys Arnette and Abied Mahmoud.

Dr. Ruey-Lin Chang has been a source of knowledge, encouragement and friendship much needed during my trials. In particular, I have come to admire your incredible skill at clear and concise writing (a skill I sadly lack).

Special thanks to Dr. Austin Nevin, Researcher at CNR, Italy. Dr. Mikkel Christensen,Resracher at Oslo University.

I want to say special thanks to the priests of Samnoud church and Dr. Waiel Alplihy the General director of conservation in Delta-SCA.

I am very grateful to. Prof. Dr. Mohamed Latfy and Dr.Safa Abdel Kader for their helpful and enlightening remarks during the defense.

Thanks also go to colleagues at the Grand Egyptian Museum – Conservation center. specially Dr. Hussein Kamal, Mme. Omima Ali , Mr. Momen Osman, Dr. Mohamed Abdel rahman, Dr. Basem Gehad , Mr. Ahmed Adel, Mr. Noor Mohamed, Mr.Ahmed Tarek , Mr. Islam Abdel Maksoud and Mr.Mohamed Ragab.

Last but not least, a big thank you to my parents who have supported me emotionally, organisationally and financially in various ways throughout the daunting yet entertaining time I have spent with this research.
