#### **ABSTRACT**

Since the first true inguinal herniorrhaphy was performed by Bassini over 100 years, all modifications and surgical techniques have shared a common disadvantage; suture line tension. The anatomic, physiologic and pathologic characteristics of hernia recurrence—are examined. The prime etiologic factor behind most herniorrhaphy failures is the suturing together, under tension, of structures that are not normally in apposition.

With the use of modern mesh prosthetics, it is now possible to repair all inguinal hernias without distortion of the normal anatomy and with no suture line tension.

Our comparative study of primary inguinal hernial repair was done on thirty patients divided into two groups of male patients their age ranged from 20-40 years:

- 5 Group A: included twenty patients had their hernias repaired with mesh.
- Group B: included ten patients had their hernias repaired by Bassini repair.

A compartive study has been done between both groups as regard to postoperative pain, postoperative complications, return to normal activities (walking without difficulty) and return to work in addition to total hospital stay.

#### **KEY WORDS**

Complications of inguinal hernia Methods of inguinal hernia repoirs.

## Acknowledgement

First and before all, thanks to God for his care and passion.

I Would like to express my deep appreciation and gratitude to Prof. Dr. Nabil Abdel Meguid, Professor of general surgery, Faculty of medicine, Cairo University for his kind guidance, supervision and encouragement, his comments and advice that made the work more organized and meaningful.

I am also indebted to Dr. Emad Khalaf, Assistant Professor of general surgery, Faculty of medicine, Cairo University for his great effort and precious advice's and for his continuous help, support and assurance.

I Would like also to express may sincere and eternal indebtedness to Dr. Ashraf Haider Ghaleb, Lecture of general surgery faculty of Medicine, Cairo University whose kind support and sincere guidance gobeyond every evaluation.

Last, but not the least, I thank all my colleagues and all who gave me a hand while working on this thesis, to my family all my love goes.
