

Ultrastructural and Molecular Studies on some Protozoa Parasitizing Egyptian Earthworms (Annelida)

By
Ahmad Mohammad Hamdy Abdel Azim Nigm
(M.Sc.)

A THESIS SUBMITTED FOR THE AWARD OF
THE Ph. D. DEGREE IN ZOOLOGY

SUPERVISED BY

Late Dr. Abdel Hafiz H. Mohammed Dr. Nadia Farid Ramadan

Prof. of Protozoology

Prof. of Protozoology

Dr. Samia M. Fawzi

Dr. Hoda A. Taha

Assist. Prof. of Parasitology

Assist. Prof. of Parasitology

Faculty of Science
Ain Shams University

DEPARTMENT OF ZOOLOGY
FACULTY OF SCIENCE
AIN SHAMS UNIVERSITY
2013

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

" إنا فتحنا لك فتحا مبينا. ليغفر لك الله ما تقدم
من ذنبك و ماتأخر و يتم نعمته عليك و يهديك
صراطا مستقيما. و ينصرك الله نصرا
عزيزا."

سورة الفتح : آية 1-3.

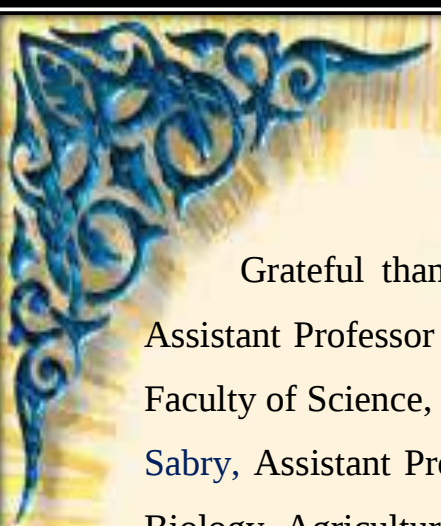

ACKNOWLEDGMENTS

“ "Praise be to Allah, the Cherisher and Sustainer of the Worlds; Most Gracious, Most Merciful."

I would like to express my deep gratitude and appreciation to late **Professor Dr. Abdel Hafiz Helmy Mohammed**, Professor of Protozoology, Zoology Department, Faculty of Science, Ain Shams University, for suggesting the present investigation, valuable contribution and in supervising the work, also, his continuous guidance and for critical reading of many parts of the manuscript.

Also, I would like to express my gratitude to **Professor Dr. Nadia F. Ramadan**, Professor of Protozoology, Zoology Department, Faculty of Science, Ain Shams University, for her tutorial guidance, and unfailing help in revising the manuscript. I am also deeply grateful to **Dr. Samia Fawzi**, Assistant Professor of Parasitology, Zoology Department, Faculty of Science, Ain Shams University, for her valuable suggestions, close supervision and kind help in the reading of the manuscript.

II

Grateful thanks are also due to **Dr. Hoda Taha**, Assistant Professor of Parasitology, Zoology Department, Faculty of Science, Ain Shams University, and **Dr. Khaled Sabry**, Assistant Professor of Parasitology and Molecular Biology, Agricultural Research Center for their interest in the work, valuable help for PCR protocol, encouragement and sincere help.

List of Tables

	Page
Table (1): The prevalence of infection of gregarines detected in the oligochaetes examined during the present survey.	31
Table (2): Species host index of the various species of gregarines detected during the present survey.	32
Table (3): Dates of examination, localities of oligochaetes investigated during the present survey, the total number and percentage of infected worms.	33
Table (4): The prevalence of infection of gregarines in the present survey compared with Ramadan's and Nigm's surveys.	36
Table (5): Comparison between the five species of <i>Apolocystis</i> infecting earth worms in Egypt.	85
Table (6): Comparison between <i>Apolocystis michaelsoni</i> and <i>A. perienteron</i> n. sp. from <i>Pheretima</i> spp.	90
Table (7): Comparison between <i>Apolocystis janovyi</i> and <i>A. perienteron</i> n. sp..	92

List of Tables (Cont.)

	Page
Table (8): Comparison between the species of <i>Apolocystis</i> infecting <i>Alma</i> sp. and <i>Limnodrilus</i> sp. in Egypt.	132
Table (9): The incidence of infection of <i>Alma</i> sp. with <i>A. pseudocytophilia</i> n. sp..	139
Table (10): The prevalence of infection of <i>Alma</i> sp. with <i>A. pseudocytophilia</i> n. sp..	140
Table (11): Prevalence of infection of <i>Pheretima</i> spp. with <i>Apolocystis proventus</i> n. sp..	184
Table (12): The intensity of infection of <i>Pheretima</i> spp. with <i>Apolocystis proventus</i> n. sp..	186
Table (13): Comparison between three species of <i>Apolocystis</i> infecting some earthworms in Egypt.	216
Table (14): The ascending order of <i>Apolocystis</i> species according to the size of the trophozoite (Away from other Egyptian species).	246
Table (15): Examples of species of <i>Monocystis</i> that were transferred to “new” genera.	277

List of Tables (Cont.)

	Page
Table (16): Comparison of the descriptions of <i>Monocystis gizahensis</i> and unidentified species of <i>Monocystis</i> in the work of Ramadan and the species under consideration.	294
Table (17): Comparison between the description of unidentified species of <i>Monocystis</i> in the work of Nigm and the species under consideration.	297
Table (18): Comparison of the description of <i>Monocystis lememei</i> and the Egyptian species.	304
Table (19): List of host worms, site of infection and distribution of different species of <i>Zygocystis</i> .	345
Table (20): The prevalence of infection of <i>Pheretima</i> spp. with <i>Zygocystis hafizi</i> n. sp..	348
Table (21): The comparison between <i>Zygocystis grassi</i> and that in the present work.	378
Table (22): Scoring absent/present bands and polymorphic RAPD-PCR patterns among the five species produced by primer OP-Z13.	409

List of Tables (Cont.)

	Page
Table (23): Scoring sheet and polymorphic RAPD-PCR patterns using OP-Z17.	411
Table (24): Scoring sheet and polymorphic RAPD-PCR patterns using OP-Z19.	414
Table (25): Scoring sheet and polymorphic RAPD-PCR patterns using OP-B3.	417
Table (26): Scoring sheet and polymorphic RAPD-PCR patterns using OP-B6.	421
Table (27): Number of generated bands for the five species of gregarines produced by each primer.	421
Table (28): Shared and unshared bands between the five species of gregarines.	422
Table (29): Scorable, specific present and specific absent bands for each primer.	424
Table (30): Number of analyzed bands, number of polymorphic bands and size of fragments produced by the five selected primers.	424

List of Tables (Cont.)

	Page
Table (31): Total number of DNA fragments of the five gregarines generated from the sum of five primers (Bold diagonal). Number of pair-wise shared bands between each two species (above the diagonal). Similarity matrix or Jaccard's coefficient (below the diagonal) between each two species was calculated according to UPGMA Clustering Technique (Unweighted Pair Group Method with Arithmetic Mean).	425
