Acknowledgment

Words fail to express my supreme appreciation to professor Dr. Mohamed F. Bassiouny head of cardiothoracic surgery Dept. Ain Shams University who was quite a tutor, guide and instructor throughout my work. His attitude has been my inspiration during the preparation of this thesis.

I wish also to thank professor Dr. Eglal Abdel Razik Prof. of pathology at Ain shams University who has been always ready with help and advice throughout this work.

I would like also to express my sincere thanks and appreciation to Prof. Dr. Tarek Zaghloul Prof. of cardiothoracic surgery at Ain Shams University for his great help and suggestions in preparing this thesis

Finally, I would like to thank all members and staff of our Dept. for their help and cooperation.

List Of Figures

Fig. (1) : The interior of the left ventricle.	4
Fig. (2) : Short-axis view from above of the aortic valve.	5
Fig. (3) : Development of aortic valve.	6
Fig. (4) : The extra length of aortic cusps.	7
Fig. (5) : Contact between aortic cusps during systole and diastole.	8
Fig. (6) : Structural relationships of the left ventricular outflow tract.	9
Fig. (7) : Cardiac skeleton.	10
Fig. (8) : The ascending aorta.	11
Fig. (9) : Relations of the right aortic sinus.	12
Fig. (10) : Relation of the posterior aortic sinus.	13
Fig. (11) : Relation of the aorta to the left ventricle	14
Fig. (12) : Relation of the left aortic sinus.	15
Fig. (13) : Normal aortic valve viewed from above.	16
Fig. (14) : A bicuspid aortic valve stenosis viewed from above.	17
Fig. (15) : A tricuspid aortic valve stenosis viewed from above.	18
Fig. (16) : A unicuspid aortic valve stenosis viewed from above.	18
Fig. (17) : A quadricuspid aortic valve stenosis viewed from above.	19
Fig. (18) : Rheumatic aortic valve show commissural fusion and leaflet fibrosis.	20
Fig. (19) : Rheumatic aortic valve stenosis showing calcification at commissural sites.	20
Fig. (20) : Calcific aortic stenosis in bicuspid aortic valve.	21
Fig. (21) : Calcific aortic stenosis in tricuspid aortic valve.	22
Fig. (22) : Posteroanterior view X-ray of the chest in a 62-year-old male with calcific aortic stenosis shows a normal-sized heart with a slightly enlarged ascending aorta.	24
Fig. (23) : A preoperative ECG of an 32-years old male with aortic stenosis showing left ventricular hypertrophy.	25
Fig. (24) : Parasternal long-axis view echocardiography in systole show calcific aortic stenosis.	26
Fig. (25) : Sever aortic stenosis is evaluated from the apical approach using a non-imaging, continuous- wave Doppler device.	26
Fig. (26) : frontal-View angiogram of a patient with valvar aortic stenosis.	27
Fig. (27) : Infective endocarditis of the aortic valve cusps.	28
Fig. (28) : Aortic root dilation in a patient with Marfan's disease causes aortic regurgitation.	29

Fig. (29) : Barium Opacifies the esophagus on the chest films of a patient with aortic regurgitation.	33
Fig. (30) : Continuous-wave Doppler recording from the apex toward the aortic valve shows the high velocity diastolic flow jet due to aortic regurgitation.	34
Fig. (31) : Vertical laminar airflow cabinet.	47
Fig. (32) : Harvested aortic conduit and pulmonary valve conduit.	50
Fig. (33) : Control freezing pouch with temperature probe placed through a watertight portal.	65
Fig. (34) : Parasternal long axis two-dimensional echocardiographic view for allograft sizing.	79
Fig. (35) : Trimming of aortic homograft valve pillars.	81
Fig. (36) : Aortic homograft with non-coronary sinus intact.	81
Fig. (37) : Reverse " S " aortotomy for freehand aortic valve replacement with allograft aortic valve.	83
Fig. (38) : Three sutures are placed for the proximal suture line so as to "line up" the allograft coronary sinuses to the recipient coronary ostia.	84
Fig. (39) : Continuos proximal suture line for free-hand insertion of aortic homograft.	85
Fig. (40) : Allograft trimming below the coronary ostia.	86
Fig. (41) : The distal suture line for homograft insertion.	86
Fig. (42-A) : Trimming of homograft non-coronary sinus in flange technique.	87
Fig. (42-B) : The distal suture line is continued to the points where the aortotomy closure sutures meet them.	88
Fig. (43) : In classic technique all three sinuses of the homograft are excised.	88
Fig. (44) : The aortotomy suture incorporates and approximates the intact noncoronary sinus.	90
Fig. (45) : The aortotomy is closed and homograft is in position.	90
Fig. (46) : interrupted proximal suture line technique for freehand aortic valve replacements.	92
Fig. (47) : Aortotomy for annulus enlargement when using the Manouguian approach.	94
Fig. (48) : Pledged technique in the proximal suture line used for mitral to mitral valve tissue closure (Manouguian Technique)	94
Fig (49) : Aortic Annulus enlargement.	95
Fig. (50) : Closure of the aortic root following freehand aortic valve insertion.	97

Fig. (51) :Aortic root geometry and the size of the noncoronary sinus are maintained using the classic technique plus augmentation using Dacron patch for a small aortic root.	98
Fig. (52) : Placement of sutures to manage coronary ostia approaching 180° orientation.	100
Fig. (53) : Allograft intra-aortic cylinder with side to side coronary artery anastomoses.	101
Fig. (54) : If coronary ostia are made to approximate one another and are too high, the leaflet may be deformed and may prolapse.	102
Fig. (55) : The aorta has been transected and the aortic buttons around the coronary ostia have been created.	106
Fig (56) : Interrupted proximal suture line technique in aortic root replacement.	107
Fig. (57) : Suturing of the coronary buttons.	108
Fig. (58) : Distal suture line of an allograft aortic root replacement using Teflon felt strip.	109
Fig. (59) : Aortic root replacement with homograft and the aortic root abscess has been obliterated.	110
Fig. (60) : Use of anterior mitral leaflet of the homograft to repair the aortic sub-annular defect in cases of aortic root abscess.	111
Fig. (61) : The septal defect is filled with the entire anterior leaflet of the mitral valve.	114
Fig. (62) : trimming of aortic homograft before insertion on the operating room.	121
Fig. (63) : Aortic homograft in place after compilation of proximal suture line.	123
Fig. (64) : A pie- chart showing percentage of Egypt and Houston patients.	128
Fig. (65) : A pie- chart showing percentage of males and females.	129
Fig. (66) : A bar showing age and sex distribution in relation to years.	129
Fig. (67) : A pie-chart showing the preoperative percentage of NYHA function class.	130
Fig. (68) : A preoperative ECG of an 19 old male (No. 11)with aortic stenosis showing left ventricular hypertrophy and strain pattern.	131
Fig. (69) : Chest X-ray Shows left ventricular hypertrophy.	131
Fig. (70) : A pie-chart showing the etiology of aortic valve disease in our study.	132

Fig. (71) : A pie-chart showing the pathology of aortic valve disease in our patient.	133
Fig. (72) : preoperative transthoracic 2-D Echo. in patient No. 15. Showing thickened aortic valve leaflet.	134
Fig. (73) : Preoperative transthoracic Doppler in patient No. 15 Showing sever aortic regurgitation	134
Fig. (74) : A pie-chart showing percentage of cryopreserved and antibiotic sterilized homografts which were used in our patients.	136
Fig. (75) : A pie-chart showing number, percentage, and cause of discarded antibiotic sterilized homografts.	137
Fig. (76) : A pie-chart showing number , percentage and type of the surgical techniques that were done in our patient.	139
Fig.(77) Shows aortic valve area by preoperative ECHO. in relation to aortic ring diameter measured intraoperative in mm.	140
Fig. (78) : A chart showing number, percentage and results of transesophageal echocardiography.	142
Fig (79) : A chart Showing the comparison between the mean of LVEDD and LVESD in the preoperative and postoperative period.	145
Fig. (80) : A chart Comparing the mean of fractional shortening and ejection fraction during preoperative and postoperative periods.	145
Fig. (81) shows the preoperative EF% compared to postoperative EF% in survival.	146
Fig. (82) : A chart Showing the number and percentage of survival in both group and the number and percentage of the mortality on each group.	148

List Of Tables

	Page
- Table 1 Showing different protocols for aortic homograft sterilization.	55
- Table 2 Showing calcification of patients according to etiology, pathology and associated lesions.	133
- Table 3 Showing Preoperative echocardiography finding. LVEDD = Lt. Ventricular end diastolic dimension. LVESD = Lt. Ventricular end systolic dimension. EF = ejection fraction. FS = fraction shortening.	135
- Table 4 Showing Preoperative echocardiography aortic diameters.	135
- Table 5 Showing characteristics of antibiotic sterilized homografts.	137
- Table 6 shows aortic valve area by preoperative echo in relation to aortic ring diameter measured intraoperatively in mm.	140
- Table 7 Showing the echocardiographic data of the postoperative patients in the 1 st postoperative, after 4 weeks and after 6 months. LVEDD = left ventricular end diastolic diameter. LVESD = left ventricular end systolic diameter. FS = fractional shortening. EF = ejection fraction.	144
- Table (8) shows the preoperative EF% compared to postoperative EF% in survival.	146
- Table (9) Showing all patients data pre & postoperative.	149

List of Abbreviations

- RCA = right coronary artery
- A = anterior
- AATB = American Association of Tissue Banks
- AI = Aortic insufficiency
- AIDS = acquired immune deficiency disease
- AO = aorta
- ARC = AIDS-related complex
- AV = Aortic valve
- CJD = Creutzfeldt-Jakob disease
- DMSO = dimethyl sulfoxide
- EF = Ejection fraction
- FCS = fetal calf serum
- FDA = United States Food and Drug Administration
- Fig. = Figure
- FS = Fraction shortening
- L = left,
- LC = Left coronary ostia
- LCA = left coronary artery
- LV = left ventricle
- LV = Left ventricle
- LVEDD = Left ventricular end diastolic dimension
- LVEDP = Left ventricular end diastolic pressure
- LVESD = Left ventricular end systolic dimension
- mg = milligram
- ml = millilitre

- mm = millimetre
- MS = Membranous septum
- MS = Membranous septum
- MV = Mitral valve
- NYHA = New-York Heart Association
- P = posterior
- PPF = plasma protein fraction
- R = right
- RA = Right atrium
- RC = Right coronary ostia
- RV = Right ventricle
- RV = Right ventricle
- SD = Standard deviation
- ST = tricuspid valve
- VS = ventricular septum
- VTB = Virginia Tissue Bank
