

Angiotensin-Converting
Enzyme in children with insulin
dependent diabetes mellitus

Thesis

Submitted for partial fulfilment of the master degree
(M.Sc.) in Pediatrics

Presented by

Sameh Aly Hassan

M.B., BCh., 1991

Supervisors

Prof. Dr. / **Mona Hussein El samahy**

Associate professor of Pediatrics
Ain Shams University

Dr. / **Malaka Mohammed Azmy**

Fellow of Pediatrics
Ain Shams University

Dr. / **Hala Ahmed Talkhan**

Lecturer of Clinical Pathology
Ain Shams University

Faculty of Medicine
Ain Shams University
1996

بسم الله الرحمن الرحيم

اقترأ بسم ربك الذي خلق* خلق الإنسان
من علق* اقترأ و ربك الأكرم الذي علم
بالقلم* علم الإنسان ما لم يعلم

صدق الله العظيم

ACKNOWLEDGMENT

First of all thanks to God most gracious and ever merciful .

I would like to express my sincere and deep gratitude to
PROFESSOR DR. MONA EL SAMAHY, Associate
Professor of Pediatrics , Faculty of Medicine , Ain Shams University.
for her kind supervision , continuous encouragement , and valuable
remarks throughout the entire period of this study .

I wish to express my deep appreciation and gratitude to **DR.**
HALA A. TALKHAN, Lecturer of Clinical Pathology, Faculty
of Medicine , Ain Shams University , for her supervision and valuable
directions .

I do feel greatly indebted to **DR. MALAKA AZMY**, Fellow of
Pediatrics , Faculty of Medicine , Ain Shams University , for sharing
her expertise , valuable time , and help for suggestion to ensure the
accuracy of this work .

I would also like to express my deep appreciation and gratitude to
PROFESSOR DR. ALI KHALIFA , Professor of
Biochemistry , Faculty of Medicine , Ain Shams University , for his
kind support and continuous encouragement .

I owe special thanks to my family for their kind help and continuous
support .

Arabic summary	150-152

List of tables

Table[1]:-Immunologic abnormalities that precede the development of overt type1 diabetes mellitus.	14
Table[2]:-Classification of diabetic nephropathies .	51
Table[3]:-Data obtained from history of all IDDM patients	77
Table[4]:-Data obtained from clinical examination of all IDDM patients.	79
Table[5]:-Laboratory investigations of all IDDM patients.	81
Table[6]:-Data of the controls	83
Table[7]:-Descriptive data of the controls.	84
Table[8]:-Data obtained from history of IDDM patients without MAU.	86
Table[9]:-Data obtained from clinical examination of IDDM patients without MAU.	87
Table[10]:-Laboratory investigations of IDDM patients without MAU.	88
Table[11]:-Descriptive data of IDDM patients without MAU.	89
Table[12]:-Data obtained from history of IDDM patient with MAU.	90

Table[13]:-Data obtained from clinical examination of IDDM patients with MAU.	91
Table[14]:-Laboratory investigations of IDDM patients with MAU.	92
Table[15]:-Descriptive data of IDDM patients with MAU.	93
Table[16]:-Data obtained from history of IDDM patients with good to fair metabolic control	95
Table[17]:-Data obtained from clinical examination of IDDM patients with good to fair metabolic control.	96
Table[18]:-Laboratory investigations of IDDM patients with good to fair metabolic control	97
Table[19]:-Descriptive data of IDDM patients with good to fair metabolic control.	98
Table[20]:-Data obtained from history of IDDM patients with poor metabolic control.	99
Table[21]:-Data obtained from clinical examination of IDDM patients with poor metabolic control.	100
Table[22]:-Laboratory investigations of IDDM patients with poor metabolic control.	101
Table[23]:-Descriptive data of IDDM patients with poor metabolic control	102

Table[24]:-Comparison between patients and controls as regards ACE.	103
Table[25]:-Comparison between groupI {with MAU} and groupII {without MAU} as regards ACE.	103
Table[26]:-Comparison between diabetic children with {good to fair} metabolic control and those with {poor } metabolic control as regards ACE.	105
Table[27]:-Comparison between groupI {with MAU} and groupII {without MAU} as regards HbA1c	105
Table[28]:-Comparison between diabetic children with {good to fair} metabolic control and those with {poor } metabolic control as regards MAU.	105
Table[29]:-Correlation coefficient between ACE in all IDDM patients and diabetic ketoacidosis,age,duration of the disease,dose of insulin/kg,history of urinary tract infection,family history and body mass index.	107
Table[30]:-Correlation coefficient between ACE in all IDDM patients and MAU,RBG,HbA1c,systolic and diastolic blood pressure.	107
Table[31]:-Correlation coefficient between MAU in all IDDM patients and HbA1c,systolic and diastolic blood pressure, age,duration of the disease and body mass index.	113

Table[32]:-Correlation coefficient between HbA1c in all IDDM patients and age,duration of the disease and body mass index.	113
Table[33]:-Correlation coefficient between severity of the disease and RBG, weight% and height%.	117
Table[34]:-Correlation coefficient between duration of the disease and systolic and diastolic blood pressure.	117
Table[35]:-ACE correlation coefficient with MAU in groupI {with MAU} and groupII{without MAU}.	118
Table[36]:-ACE correlation coefficient with HbA1c in groupI {with MAU} and groupII{without MAU}.	118

LIST OF ABBREVIATIONS

ACE	- Angiotensin converting enzyme
BMI	-Body mass index
CFIDS	-Chronic fatigue immune dysfunction syndrome
DBP	-Diastolic blood pressure
DKA	-Diabetic ketoacidosis
FH	-Family history
HbA _{1c}	-Glycosylated haemoglobin
IDDM	-Insulin dependent diabetes mellitus
MAU	-Microalbuminurea
NIDDM	-Non-insulin dependent diabetes mellitus
PRA	-Plasma renin activity
RBG	-Random blood glucose
SBP	-Systolic blood pressure
SD	-Standard deviation
SCEA	-Serum converting enzyme activity
UAER	-U rinary albumin excretion rate
UTI	-Urinary tract infection
