ACKNOWLEDGMENT

No words could ever express my deep gratitude and extreme appreciation to **Prof. Dr. Mohamed Anwar El-Etribi**, Professor of Neuropsychiatry and Chairmen of the Neurological Unite, Faculty of Medicine, Ain Shams University for his sincere help, valuable guidance and continuous encouragement all through my work.

I am also greatly indebted to **Prof. Dr. Amira Ahmed Zaki Dewedar**, Prof. of Neuropsychiatry, Faculty of Medicine, Ain Shams University for her unlimited help, meticulous supervision, scientific criticism and valuable advices throughout this work.

I would also to express my sincere thank to **Prof. Dr. Mohamed Hassan El-Banoubi**, Prof. of Neuropsychiatry and Head Department of Greatric Medicine, Faculty of Medicine, Ain Shams University for his continuos encouragement constant support, valuable guidance throughout this work.

I am also extent my deep thanks to **Prof. Dr. Mohamed Osama Abdul Ghani**, Prof. of Neuropsychiatry, Faculty of Medicine, Ain Shams University for his meticulous supervision unfailing guidance, valuable ideas all through this work.

Last but not least I would like to thank all staff of Neurology Unit who helped me during this work.

Contents

	Page
Introduction	1
Aim of the work	4
Review of Literature	5
• Definition and classification of epilepsy	5
• Causes of epilepsy	19
• Diagnosis of epilepsy	41
• Treatment of epilepsy	64
Patients and Methods	93
Results	98
Discussion	150
Summary	168
Conclusion and Recommendations	173
References	175
Appendixes	210
Arabic Summary	

List of Tables

Tab.. No.	Title	Page
	Tables in Review	
A	Shows the probable main mechanisms of action of new AEDs	68
B	Prescribing newly antiepileptic drugs in adults	73
C	Stopping antiepileptic treatment	75
D	Candidacy for considering epilepsy surgery	78
	Tables in Results	
1	Division of epileptic patients in our study according to the prognosis	108
2	Age distribution in chronic and control groups	110
3	Sex distribution in chronic and control groups	112
4	Family history in chronic and control groups	114
5	Similar family condition in chronic and control groups	116
6	Consanguinity in chronic and control groups	117
7	Similar conditions and consanguinity in chronic and control groups	118
8	Relevant perinatal history in chronic and control groups	120
9	Relevant natal history in chronic and control groups	121
10	Relevant past history in chronic and control groups	122
11	Febrile convulsion in chronic and control groups	124
12	Neurological manifestations in chronic and control groups	126
13	Psychiatric manifestations in chronic and control groups	127
14	Types of seizure in chronic and control groups	129
15	Therapeutic plasma level of antiepileptic drugs in chronic and control groups	130
16	Cranial computed tomography CT in chronic and control groups	131

17	Result of routine electroencephalography EEG in chronic and control groups	132
18	Digital EEG finding and routine EEG in fifty patients in chronic group (Group I)	134
19	Digital EEG, MRI and routine EEG finding in 19 patients who had past history at febrile convulsion in chronic group (Group I)	136
20	Routine EEG versus digital EEG in correspondance to MRI	138
21	Routine EEG versus digital EEG in correspondance to CT	140
22	Monotherapy versus polytherapy in chronic and control groups	142
23	Compliance in chronic and control groups	144

List of Figures

Fig. No.	Title	Page
1	Division of epileptic patients in our study according to the prognosis	109
2	Age distribution in chronic and control groups	111
3	Sex distribution in chronic and control groups	113
4	Family history in chronic and control groups	115
5	Similar conditions, consanguinity and both in chronic and control groups	119
6	Perinatal, natal and past history in both chronic and control groups	123
7	Febrile convulsions in chronic and control groups	125
8	Neurological and psychiatric manifestations in chronic and control groups	128
9	Routine EEG in both chronic and control groups	133
10	Digital EEG finding and routine EEG in fifty patients in chronic group (group I)	135
11	Digital EEG, MRI and routine EEG finding in 19 patients who had past history of febrile convulsion in chronic group	137
12	Routine EEG versus digital EEG in relation to MRI	139
13	Routine EEG versus digital EEG in relation to CT	141
14	Monotherapy versus polytherapy in chronic and control groups	143
15	Compliance in chronic and control groups	145
