

Tubo-Pelvic Pathology In Patients With Primary Infertility

Thesis submitted for
partial fulfillment of M.D. degree in
Pathology

By

Amal Ibrahim Amin Alloub
(M.B., B.Ch., M.Sc., Ain Shams)

Supervised by

Prof. Adly Farid Ghaly

Prof. of Pathology

بسم الله الرحمن الرحيم

unit for their constant help, support and understanding throughout the whole work.

I would like to thank the staff working in the Laparoscopic Surgery Unit at Ain Shams University Hospitals. Also I thank the patients who have willingly participated in this study and allowed me to obtain the necessary material for my thesis.

Finally, I thank my parents, who showed me the path that I follow; for my husband, with whom I travel it; and for my children, whose paths await them.

Table of Contents

	Page
List of Tables	iii
Legend of Graphs	vi
Legend of Figures	viii
List of Abbreviations	x
Introduction	1
Aim of Work	3
Review of Literature	
- Anatomy	5
- Histology	9
- Physiology of the tube with Morphological Correlation	12
- Pathology of Salpingitis	18
- Tubo-Pelvic Pathology Affecting Fertility	
▪ Pelvic Inflammatory Disease	29
▪ Infertility and Chlamydial Disease	42
▪ Granulomatous Pelvic inflammatory Disease	
-Pelvic tuberculosis	69
-Bilharziasis of the fallopian tubes	81
▪ Endometriosis	85
Patients and Methods	95
Results	103

Table of Contents (cont.)

Discussion	155
Summary	171
Conclusion & Recommendations	175
References	179
Appendix	217
Arabic Summary	

List of Tables

	Page
Table (I) Pelvic inflammatory disease	33
Table (II) Factors influencing the tubal occlusion following Salpingitis	41
Table (III) Classification of endometritis	54
Table (IV) Cytological features of chlamydial infection	63
Table (V) Granulomatous inflammatory disease of the pelvis -----	69
Table (1) Classification of the 104 studied primary infertile patients according to gross pathology detected during laparoscopy	109
Table (2) Subclassification of the infertile with a tubopelvic factor due to adhesions	110
Table (3) The incidence of cervical chlamydia trachomatis in the studied primary infertile patients as detected by direct immunofluorescent test	111
Table (4) Statistical analysis for the presence of chlamydia trachomatis in the studied infertile patients, with respect to adhesions	112

Table (5) The incidence of cervical chlamydia trachomatis in the infertile patients, with a tubopelvic factor, showing adhesions, with respect to grading of the adhesions	113
Table (6) The incidence of cervical chlamydia trachomatis in the infertile patients, with a tubopelvic factor, showing adhesions, with respect to tubal patency	114
Table (7) Results of the Pap smear of the 104 studied infertile patients	115
Table (8) Comparison between the results of Pap smear and direct immunofluorescence test in detecting cervical chlamydia trachomatis infection	116
Table (9) Results of the pre-menstrual endometrial biopsies of the studied 104 infertile patients	117
Table (10) Comparison between endometrial pathology in chlamydia positive patients and chlamydia negative patients by means of direct immunofluorescence	118
Table (11) Comparison between endometrial pathology results of the tubopelvic factor (with adhesions) and the no tubopelvic factor group	119
Table (12) Pathology of the 9 tubo-ovarian masses, 7 tubal and 5 adhesion Biopsies	120

Table (13)

Pathology of the tubal, tubo-ovarian and adhesion biopsies
taken, in relation to chlamydial cervical infection **121**

Table (14)

Etiology of the tubopelvic factor in the studied patients **122**

Table (15)

Descriptive analysis of the age and duration of infertility of
the studied primary infertile **123**

Legend of Graphs

	Page
Graph (1) Classification of the 104 studied primary infertile patients according to gross pathology detected during laparoscopy	125
Graph (2) Classification of the tubopelvic factor patients	126
Graph (3) Classification of the no tubopelvic factor patients	127
Graph (4) Subclassification of the adhesions	128
Graph (5) Incidence of chlamydia trachomatis in the studied patients	129
Graph (6) Incidence of chlamydia trachomatis in the subgroups	130
Graph (7) Incidence of chlamydia trachomatis with respect to grading of adhesions	131
Graph (8) Incidence of chlamydia trachomatis with respect to tubal patency	132
Graph (9) Results of the Pap smear in the studied patients	133
Graph (10) Results of the endometrial biopsies in the studied patients	134

Graph (11) Comparison between endometrial pathology in chlamydia positive patients and chlamydia negative patients	135
Graph (12) Comparison between endometrial pathology results of the TPF group and NO TPF group	136
Graph (13) Pathology of the tubo-ovarian masses	137
Graph (14) Pathology of the tubal biopsies	138
Graph (15) Pathology of the adhesions	139
Graph (16) Pathology of the tubal, tubo-ovarian and adhesion biopsy taken, in relation to chlamydial infection	140
Graph (17) Etiology of the tubo-pelvic factor	141
Graph (18) Mean age and duration of infertility of the studied patients	142

Legend of Figures
