## ***Dedication***

*To the Teacher of Mankind, to the trustworthy  
Leader Mohamed, the Prophet of Allah, God's blessing  
and peace be upon Him.*

*O God! Consider this work as part of my good deeds  
on Judgement Day.*

*Amen*

*Mohamed El Saadany*

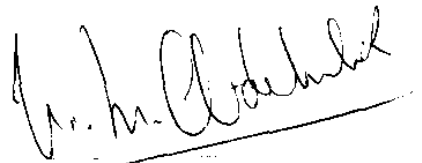

١٠٠

### NOTE

esis is submitted to the Faculty of Science, Ain Shams University in partial fulfilment of requirements of the Master's Degree of Science in Geology. In addition to the research materialised in this dissertation, the candidate has attended and successfully passed examination in the following M. Sc. courses:

and geology and mapping  
statistics and basic language  
paleontology  
ecology  
stratigraphy  
stratigraphy  
advanced structural geology  
tectonics

, the student has also passed the final examination of a course in the English Language

Prof. Wagih Abdelmalek  
Head of Geology Department

## LIST OF FIGURES

	Page No.
Regional geological map showing the location of the studied sections.	2
A rock stratigraphic classification for the Upper Cretaceous (Ghorab, 1961).	8
Field photo (Panoramic view) of Gabal Manzour looking NW, showing the Lower Cretaceous rocks, (A), conformably overlain by Cenomanian rocks, (C).	18
Field photo (Panoramic view) of Gabal El Minsherah, looking SE, showing the Jurassic rocks (J), and the overlying Cretaceous rocks. (CR)	19
Lithostratigraphic column of Gabal Manzour measured section.	20-21
Lithostratigraphic column of Gabal El Minsherah measured section.	22
Lithostratigraphic column of El Hasana composite section.	23
Stratigraphic correlation between the rock units of the studied sections.	24
Lithostratigraphic column of the Malha and Risan Aneiza formations at Gabal Manzour.	26
Field photo showing general view of the Risan Aneiza Fm. (R) & the Halal Fm. (H), at Gabal Manzour.	27
Field photo showing cross-bedded & bioturbated sandstone in the upper part of the Malha Fm. (Bed-1, MZ-9), at Gabal Manzour.	27
12- Field photo showing fine grained, bioturbated & cross bedded sandstone in the upper part of the Malha Fm. (Bed-1, MZ-8&9), at Gabal Manzour.	28
13- Field photo showing mudstone (Bed-3, MZ-12), rich in small gastropod in the lower part & dolomitic sandstone ledge (Bed-4, MZ-13) in the middle part of the photo, in the lower part of the Risan Aneiza Fm. at Gabal Manzour.	28
Field photo showing variegated & laminated shale in the lower part of the Risan Aneiza Fm. (Bed-7, MZ-25), at Gabal Manzour.	28
Field photo showing sandstone with hard ferruginous bands in the lower part of the Malha Fm. (Bed-1, MZ-5&6), at Gabal Manzour.	29

Figure No.	Page No.
16- Field photo showing siltstone with nodular gypsum (see the hammer), followed by paleosol with sulphur (yellow color) in the middle part of the Risan Aneiza Fm. (Bed-15,MZ-49), at Gabal Manzour.	29
17- Field photo showing 2nd Actonella bed in the upper part of the Risan Aneiza Fm. (Bed-22, MZ-58), at Gabal Manzour.	29
18- Lithostratigraphic column of the Mallia and Risan Aneiza formations at Gabal El Minsherah.	30
19- Field photo showing general view of the Risan Aneiza Fm. (R), and the Halal Fm., (H), at Gabal El Minsherah.	32
20- Field photo showing the songes of rudist-sponge reef-like complex in the upper part of the Risan Aneiza Fm., (Bed-16, MS-23), at Gabal El Minsherah.	32
21- Field photo showing rudist in the upper part of the Risan Aneiza Fm., (Bed-16, MS-23), at Gabal El Minsherah.	32
22- Lithostratigraphic column of the Halal Formation at Gabal Manzour.	35
23- Field photo showing bioturbated limestone with <i>Orbitolina cf. concava</i> (Lamarck), rudist and bivalvia in the lower part of the Halal Fm., (Bed-26, MZ-68), at Gabal Manzour.	36
24- Field photo showing rudist in the middle part of the Halal Fm., (Bed-31, MZ-75), at Gabal Manzour.	36
25- Field photo showing <i>Orbitolina</i> bank ( <i>O. cf. concava</i> (Lamarck)) in the middle part of the Halal Fm., (Bed-36, MZ-81), at Gabal Manzour.	36
26- Lithostratigraphic column of the Halal Formation at Gabal El Minsherah.	37
27- Field photo showing dolomitic limestone with bands filled by pelecypod shell fragments in the middle part of the Halal Fm., (Bed-25, MS-38), at Gabal El Minsherah.	38
28- Field photo showing reefal facies (Millestromal reef), in the upper part of the Halal Fm., (Bed-27, MS-56), at Gabal El Minsherah.	38
29- Lithostratigraphic column of the Abu Qada and Wata Formations at Gabal El Minsherah.	40

<b>Figure</b>	<b>Page</b>
<b><u>No.</u></b>	<b><u>No.</u></b>
30- Field photo showing general view of the Abu Qada Fm. (A) & the Wata Fm. (W), at Gabal El Minsherah.	41
31- Field photo showing rudist bank in the Wata Fm., (Bed-40, MS-81), at Gabal El Minsherah.	41
32- Field photo (panoramic view) of Gabal El Hasana (not studied), showing from base to top, the Sudr Chalk, Esna Shale and Thebes limestone.	45
33- Field photo showing the contact between Sudr Chalk at base and and Esna Shale at top at West Safra El Hasna (WSF).	45
34- Field photo showing the base of the Sudr Chalk filled with <i>Pycnodonta vesicularis</i> (Lamarck), northeast Gabal El Minsherah (NEM).	46
35- Field photo (close-up view) showing the Scattered <i>Pycnodonta vesicularis</i> (Lamarck), at Base of the Sudr Chalk, Northeast Gabal Minsherah (NEM).	46
36- Field photo (close-up view) showing sponges in the Sudr Chalk, at Southeast El Minsherah (SEM).	46
37- The relation of different stratigraphic subdivisions given by different authors for the Cretaceous in Sinai and neighbouring areas.	48
38- Distribution chart of the foraminiferal and some megafossils species in Gabal Manzour.	50
39- Distribution chart of the foraminiferal and some megafossils species in Gabal El Minsherah.	51
40- Distribution chart of the foraminiferal species in El Hasana composite section.	52
41- Correlation between the proposed biozones in Gabal Manzour and those recognized in Gabal El Minsherah studied sections.	53
42- Correlation of the Maastrichtian planktic foraminiferal zones with those recorded from other parts of the World.	64
43- Correlation of the Cretaceous zones in the studied sections with those proposed by different authors in Gulf of Suez Region and Sinai.	70
44- Fisher $\alpha$ Diversity paleoenvironmental indices of the Malha and Risan Aneiza formations.	81

	<b>Page</b>
	<b><u>No.</u></b>
The paleoecologic parameters and interpreted paleoenvironment at Gabal Manzour section.	82
46- The paleoecologic parameters and interpreted paleoenvironment at Gabal El Minsherah section.	83
47- Fisher $\alpha$ Diversity paleoenvironmental indices of the Sudr Chalk of El Hasana composite section.	88
48- The paleoecologic parameters and interpreted paleoenvironment of El Hasana composite section.	89
