قَالُوا سُبْحَانَكَ لَا عِلْمَ لَنَا إِلَّا مَا
عَلَّمْتَنَا إِنَّكَ أَنْتَ الْعَلِيمُ الْحَكِيمُ .
سَدَقَ اللَّهُ الْعَلِيمُ
الْبَقَّة - ٣٢ -

ACKNOWLEDGMENT

The author wishes to express his thanks and gratitude to Prof. Dr. MOHAMMED R. ABU-SHADY Professor of Microbiology and Vice Dean Faculty of Science for post-graduate studies, Ain Shams University and Prof. Dr. Assem M. Hussein, Professor of Microbiology, Botany Department, Faculty of Science, Banha University, for suggesting the point, supervising the work and providing every scientific assistance for presenting the thesis.

Thanks are also due to Head and Staff members of the Microbiology Department, Faculty of Science, Ain Shams University.

ABSTRACT.	xvii
PREFACE.	1
INTRODUCTION.	
Isolation of actinomycetes from natural habitates.	2
Taxonomy of actinomycetes.	4
Classical criteria for the identification of actinomycetes.	4
Morphological characteristics.	4
Cultural characteristics.	5
Physiological characteristics.	7
Antimicrobial characteristics.	9
Recent taxonomy of actinomycetes.	12
Chemotaxonomy.	13
Numerical taxonomy.	14
Recent system of classification of actinomycetes.	15
Generic identification of actinomycetes.	16
Biochemical activities of Streptomycetes.	16
Production of pigments by <i>Streptomyces</i> .	16
MATERIALS AND METHODS.	
Collection of soil samples.	18
Isolation of Streptomycetes.	18

	Page
Media.	20
Morphological characteristics.	25
Cultural characteristics and pigmentation.	25
Physiological characteristics.	25
Antimicrobial characteristics.	29
Resistance to antibiotics.	29
Chemotaxonomical characteristics of <i>Streptomyces</i> isolates.	30
Phsico-chemical characteristics.	31
Nutritional requirements for pigment production.	33

EXPERIMENTAL RESULTS.

PART I:

The Blue Pigmented Group.	36
Morphological characteristics.	36
Cultural characteristics.	36
Physiological characteristics.	41
Antimicrobial characteristics.	45
Identification of isolate No. 317.	45
Extraction of blue pigment.	45
Antibiotic properties of the blue pigment.	50
Biochromatographic spectrum of the blue pigment.	50
Absorption spectrum in Visible and Ultra violet rays of the blue pigment.	50
p ^H sensitivity of the blue pigment.	50

	Page
Nutritional requirements for the blue pigment production.	52
PART II:	
The Violet Pigmented Group.	61
Morphological characteristics.	61
Cultural characteristics.	61
Physiological characteristics.	66
Antimicrobial characteristics.	70
Identification of isolate No. 100.	70
Extraction of violet pigment.	75
Antibiotic properties of the violet pigment.	75
Biochromatographic spectrum of the violet pigment.	75
Absorption spectrum in Visible and Ultra violet rays of the violet pigment.	75
p ^H sensitivity of the violet pigment.	77
Nutritional requirements for the violet pigment production.	77
PART III:	
The Yellow Pigmented Group.	87
Morphological characteristics.	87
Cultural characteristics.	87
Physiological characteristics.	92
Antimicrobial characteristics.	96
Identification of isolate No. 553.	96

	Page
Extraction of yellow pigment.	96
Antibiotic properties of the yellow pigment.	100
Biochromatographic spectrum of the yellow pigment.	100
Absorption spectrum in Visible and Ultra violet rays of the yellow pigment.	100
p ^H sensitivity of the yellow pigment.	100
Nutritional requirements for the yellow pigment production.	100
PART IV:	
The Red Pigmented Group.	111
Subgroup (a).	111
Morphological characteristics.	111
Cultural characteristics.	111
Physiological characteristics.	116
Antimicrobial characteristics.	120
Identification of isolate No. 208.	120
Extraction of red pigment.	120
Antibiotic properties of the red pigment.	122
Chromatographic spectrum of the red pigment.	122
Absorption spectrum in Visible and Ultra violet rays of the red pigment.	122
p ^H sensitivity of the red pigment.	122
Nutritional requirements for the red pigment production.	122

	Page
Subgroup (b).	132
Morphological characteristics.	132
Cultural characteristics.	132
Physiological characteristics.	137
Antimicrobial characteristics.	141
Identification of isolate No. 87.	141
PART V:	
The Brown Pigmented Group.	143
Morphological characteristics.	143
Cultural characteristics.	143
Physiological characteristics.	148
Antimicrobial characteristics.	152
Identification of isolate No. 101.	152
DISCUSSION.	156
SUMMARY.	162

ARABIC SUMMARY.	

List of Tables

	page
Table 1 : Some characteristics of the collected soil samples.	19
Table 2 : Morphological and cultural characteristics of isolate No. 317.	37
Table 3 : Cultural characteristics of 14-day old culture of isolat No. 317 on different agar media.	40
Table 4 : Growth of isolate No. 317 at different temperatures and in presence of some inhibitors.	42
Table 5 : Growth of isolate No. 317 on different carbon sources.	43
Table 6 : Growth of isolate No. 317 on different nitrogen sources.	43
Table 7 : Production of enzymes by isolate No. 317.	44
Table 8 : Degradation of complex compounds by isolate No. 317.	44
Table 9 : Antimicrobial potentialites of isolate No. 317 on different agar media.	46
Table 10 : Sensitivity of isolate No. 317 to different antibiotics.	49
Table 11 : Effect of different carbon sources on the blue pigment production, biomass yield and production of antimicrobial substances by isolate No. 317.	53
