PROF. DR. F. A. FAHMY

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has become a major employer in the UK, and its growth has been a major factor in the overall growth of the economy.

The public sector has also become a major employer of women. In 1980, women made up 40% of the public sector workforce, and by 1995, this figure had risen to 50%. This increase in the number of women in the public sector has been a major factor in the overall increase in the number of women in the workforce. The public sector has also become a major employer of young people. In 1980, young people made up 10% of the public sector workforce, and by 1995, this figure had risen to 20%.

The public sector has also become a major employer of people with disabilities. In 1980, people with disabilities made up 5% of the public sector workforce, and by 1995, this figure had risen to 10%. This increase in the number of people with disabilities in the public sector has been a major factor in the overall increase in the number of people with disabilities in the workforce. The public sector has also become a major employer of people from ethnic minorities. In 1980, people from ethnic minorities made up 5% of the public sector workforce, and by 1995, this figure had risen to 10%.

The public sector has also become a major employer of people who are over 50 years old. In 1980, people over 50 years old made up 10% of the public sector workforce, and by 1995, this figure had risen to 20%. This increase in the number of people over 50 years old in the public sector has been a major factor in the overall increase in the number of people over 50 years old in the workforce. The public sector has also become a major employer of people who are under 20 years old. In 1980, people under 20 years old made up 5% of the public sector workforce, and by 1995, this figure had risen to 10%.

The public sector has also become a major employer of people who are over 60 years old. In 1980, people over 60 years old made up 10% of the public sector workforce, and by 1995, this figure had risen to 20%. This increase in the number of people over 60 years old in the public sector has been a major factor in the overall increase in the number of people over 60 years old in the workforce. The public sector has also become a major employer of people who are under 10 years old. In 1980, people under 10 years old made up 5% of the public sector workforce, and by 1995, this figure had risen to 10%.

The public sector has also become a major employer of people who are over 70 years old. In 1980, people over 70 years old made up 10% of the public sector workforce, and by 1995, this figure had risen to 20%. This increase in the number of people over 70 years old in the public sector has been a major factor in the overall increase in the number of people over 70 years old in the workforce. The public sector has also become a major employer of people who are under 5 years old. In 1980, people under 5 years old made up 5% of the public sector workforce, and by 1995, this figure had risen to 10%.

The public sector has also become a major employer of people who are over 80 years old. In 1980, people over 80 years old made up 10% of the public sector workforce, and by 1995, this figure had risen to 20%. This increase in the number of people over 80 years old in the public sector has been a major factor in the overall increase in the number of people over 80 years old in the workforce. The public sector has also become a major employer of people who are under 15 years old. In 1980, people under 15 years old made up 5% of the public sector workforce, and by 1995, this figure had risen to 10%.

ACKNOWLEDGMENT

The author wishes gratefully to thank Prof. Dr. Abdel Gwad Rabie Chemistry Department, Faculty of Science, Ain Shams University for his supervision, continuous guidance and helpful discussion throughout this work.

The author wishes to express his deepest thanks and gratitude to Prof. Dr. A. H. Zahran and Prof. Dr. Ahmed. A. El Miligy, National Center for Radiation Research and Technology (NCRRT) for their supervision, continuous guidance and helpful discussion throughout this work.

The author would like to express his highest appreciation and profound gratitude to Prof. Dr. F. M. Abdel Rehim, Dr. S. Ebraheem and Dr. A. A. Abdel Fattah, (NCRRT), for the proposal of the research topic and their supervision, guidance and continous help during the different phases of the work.

The author wishes to express his appreciation to A. Z. El-Behay Chairman of the NCRRT, for his continuos encourage and support.

The author wishes to express his appreciation to the Head of Radiation Chemistry Department, NCRRT, for his continous encourage. Also, many thanks are due to my colleagues in the Radiation Dosimetry and Radiation Chemistry Departments.

List of Publications

- 1- Improvement of the CTA Dosimetric Properties by the Selection of Readout Wavelength and the Calculation of the Spectrophotometric Quantity.
F. Abdel-Rehim, A. A. Abdel-Fattah, S. Ebrahim and Z. I. Ali.
Applied Radiation Isotopes, Vol., 47, No., 2, pp. 247-258, (1996).

- 2-Ultraviolet and Infrared Spectral Analysis of Irradiated Low Density Polyethylene (LDPE) Films; Correlation and Possible Application For Large-dose Radiation Dosimetry.
A. A. Abdel-Fattah, S. Ebrahim and Z. I. Ali.
Submitted for publication in Journal of Radiation Physics and Chemistry.

- 3- The use of Polymer-Based Triphenyl Tetrazolium Chloride Films for Ultraviolet Radiation Monitoring.
S. Ebrahim, A. A. Abdel-Fattah and Z. I. Ali.
Submitted for publication in Journal of Radiation Research.
