

AIN SHAMS UNIVERSITY  
FACULTY OF ENGINEERING  
ENERGY & AUTOMOTIVE ENG. DEPT.

# THE PERFORMANCE OF A DOUBLE ACTING HYDRAULIC DAMPER

A Thesis Submitted For The Partial Fulfilment Of  
The Degree Of Master Of Science  
In Mechanical Engineering

BY

ENG. MOHAMED ABDEL RAHMAN IBRAHIM  
( B. Sc. Mech. Eng. 1978 )  
Ain Shams University

Supervised By

Dr. A.M. HUSSEIN

Dr. T.A. NOSSEIR

Prof. Dr. M. M. EL-ALAILY

ASSISTANT PROFESSOR

ASSISTANT PROFESSOR

PROF. OF AUTO. ENG.

CAIRO, JUNE 1986

Central Library - Ain Shams University

EXAMINERS :

1- Prof. Dr. A. J. GAZARIN

Head of the Union of Industries.

2- Major General Dr. M.H. AZMY

Adviser to the Head of Public Sector  
Organization for Engineering Industries.

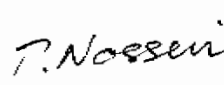

3- Prof. Dr. M.M. EL-ALAILY ( Supervisor )

Prof. of Automotive Engineering,  
Energy & Automotive Eng. Dept.,  
Ain Shams University, Faculty of Engineering.

4- Dr. T.A. NOSSEIR ( Supervisor )

Assistant Prof. of Automotive Engineering,  
Energy & Automotive Eng. Dept.,  
Ain Shams University, Faculty of Engineering.

5- Dr. A.M. HUSSEIN ( Supervisor )

Assistant Prof. of Machine Design,  
Design & Production Eng. Dept.,  
Ain Shams University, Faculty of Engineering.

**TO MY PARENTS IN GRATITUDE**

**TO MY FAMILY IN LOVE**

ACKNOWLEDGEMENT .....	i
LIST OF FIGURES .....	ii
NOTATIONS .....	vii
SUMMARY .....	ix
 CHAPTER 1      INTRODUCTION AND REVIEW OF PREVIOUS WORK .....	 1
 CHAPTER 2      EXPERIMENTAL WORK .....	 10
2.1      Description and Construction of the Designed Test Rig.....	 10
2.2      Instrumentation.....	12
2.3      Test Procedure.....	14
2.4      Experimental Results .....	15
2.4.1      Experimental Results of the Hydraulic Damper.....	 15
2.4.2      Experimental Results of the Hydraulic Damper With Its Rubber Seat.....	 16
2.5      Graphical Representation of Tabula- ted Results.....	 16
2.5.1      Graphical Representation of Tabulated Results of the Hydraulic Damper.....	 16
2.5.2      Graphical Representation of Tabulated Results of the Hydraulic Damper With Its Rubber Seat.....	 17

	<u>Page</u>
CHAPTER 3	DETERMINATION OF HYDRAULIC DAMPER
	PARAMETERS..... 18
3.1	Hydraulic Damper Equivalent Particular and Parameters..... 19
3.2	Parameters Simulating the Rubber Seat..... 23
3.3	Verification of Deduced Parameters. 24
CHAPTER 4	RESULTS AND DISCUSIONS 27
4.1	Effect of Hydraulic Damper Parameters on Its Resulting Performance 27
4.1.1	The Damping Coefficient $C$ . 28
4.1.2	The Coulomb Friction $F_f$ . 30
4.1.3	Rubber Seat Stiffness $K_1$ . 32
4.1.4	The Rubber Seat Equivalent Damping Coefficient $C_1$ . 33
4.1.5	The Stiffness of the Hydraulic Damper $K$ . 35
4.2	On the Choice of a Hydraulic Damper 36
4.2.1	The Effective Viscous Damping Coefficient..... 36
4.2.2	The Stick-Slip in the Hydraulic Damper..... 37
4.3	Conclusion..... 38
CHAPTER 5	CONCLUSION, AND RECOMENDATION FOR
	FUTURE WORK ..... 39
APPENDIX (A)	SPECIFICATION OF THE HYDRAULIC DAMPER..... 42
APPENDIX (B)	KINEMATICS OF THE CAM MECHANISM IN THE TEST RIG AND CAM GEOMETRY..... 43

ARABIC SUMMARY.....	

### ACKNOWLEDGMENT

The author wishes to express his gratitude and thanks to Prof. Dr. Mohamed M. El - Alaily , Dr. T.A. Nosseir and Dr.A.M. Hussein for their supervision and encouragement during this work .

Thanks are also due to Dr.A.I. Abd El-Aziz for his valuable advices and sincere help in the computer program enhancing .

The author is also indebted for all those who helped in any way, specially the personnel of the Automotive laboratory of the Energy and Automotive Engineering Department of Ain Shams University .

LIST OF FIGURES

<u>Fig.No.</u>	<u>Description</u>
1	The test rig .
2	General view of the test rig . ( plate )
3	The test rig . ( plate )
4	Hydraulic damper exciting system. ( plate )
5	Calibration chart for Accelerometer 4368 B&K.
6	Instrumentation . ( plate )
7	The strain gauge dunamometer .
8	A general layout of test rig instrumentation for testing of the hydraulic damper .
9	A general layout of test rig instrumentation for testing of the hydraulic damper with the rubber seat .
10	Variation of the output force and velocity of the lower end of the hydraulic damper with time at a frequency of excitation 2.33 Hz .
11	Variation of the output force and velocity at a fequency of 2.33 Hz.
12	Variation of the output force and displacement of the lower end of the hydraulic damper with time at a frequency of excitation 4.63 Hz.
13	Variation of the output force and velocity of the upper end of the hydraulic damper with time at a frequency of excitation 4.63 Hz.
14	Variation of the force at the upper end of the hydraulic damper in a rebound stroke with the displacement of its lower end at different frequencies of excitation .

<u>Fig.No.</u>	<u>Description</u>
15	Variation of the force at the upper end of the hydraulic damper in a bound stroke with the displacement of its lower end at different frequencies of excitation .
16	Variation of the displacement of the upper end of the hydraulic damper with the displacement of its lower end at different frequencies of excitation .
17	Variation of the velocity of the upper end of the hydraulic damper with the displacement of its lower end at different frequencies of excitation .
18	Variation of the transmissibility with the displacement of the lower end of the hydraulic damper at different frequencies of excitation.
19	The suspension system ( McPherson type ) .
20	The mathematical models .
21	Variation of the damping coefficient of the hydraulic damper in a rebound stroke with the velocity of its lower end .
22	Variation of the damping coefficient of the hydraulic damper in a bound stroke with the velocity of its lower end .
23	Variation of the velocity of the upper end of the hydraulic damper with time at a frequency of 2.33 Hz .
24	Variation of the velocity of the upper end of the hydraulic damper with time at a frequency of 2.33 Hz ( experimental ) .
25	Variation of the displacement of the upper end

<u>Fig.No.</u>	<u>Description</u>
	of the hydraulic damper with the displacement of its lower end at different frequencies of excitation .
26	Variation of the velocity of the upper end of the hydraulic damper with the displacement of its lower end at different frequencies of excitation .
27	Variation of the velocity of the upper end of the hydraulic damper with time for three values of the damping coefficient ( $C$ ) at a frequency of excitation 2.33 Hz .
28	Variation of the displacement of the upper end of the hydraulic damper with the damping coefficient ( $C$ ) .
29	Variation of the velocity of the upper end of the hydraulic damper with the damping coefficient ( $C$ ) .
30	Variation of the displacement of the upper end of the hydraulic damper with the displacement of its lower end at different values of damping coefficient ( $C$ ) .
31	Variation of the velocity of the upper end of the hydraulic damper with the displacement of its lower end at different values of the damping coefficient ( $C$ ) .
32	Variation of the velocity of the upper end of the hydraulic damper with time for three values of the Coulomb-friction at a frequency of excitation 2.33 Hz .
33	Variation of the displacement of the upper end of the hydraulic damper with the Coulomb-friction ( $F_f$ ) .

<u>Fig.No.</u>	<u>Description</u>
34	Variation of the velocity of the upper end of the hydraulic damper with the Coulomb-friction ( $F_f$ ) .
35	Variation of the displacement of the upper end of the hydraulic damper with the displacement of its lower end at different values of the Coulomb-friction ( $F_f$ ) .
36	Variation of the velocity of the upper end of the hydraulic damper with the displacement of its lower end at different values of the Coulomb-friction ( $F_f$ ) .
37	Variation of the velocity of the upper end of the hydraulic damper with time for five values of the rubber seat stiffness ( $K_1$ ) at a frequency of excitation 2.33 Hz .
38	Variation of the displacement of the upper end of the hydraulic damper with the stiffness of the rubber seat ( $K_1$ ) .
39	Variation of the velocity of the upper end of the hydraulic damper with the stiffness of the rubber seat ( $K_1$ ) .
40	Variation of the velocity of the upper end of the hydraulic damper with time for three values of the damping coefficient of the rubber seat at a frequency of excitation 2.33 Hz .
41	Variation of the displacement of the upper end of the hydraulic damper with the damping coefficient ( $C_1$ ) .
42	Variation of the velocity of the upper end of the hydraulic damper with the damping coefficient ( $C_1$ ) .

<u>Fig.No.</u>	<u>Description</u>
43	Variation of the velocity of the upper end of the hydraulic damper with time for three values of the hydraulic damper stiffness ( K ) at a frequency of excitation 2.33 Hz .
44	Variation of the displacement of the upper end of the hydraulic damper with its stiffness (K).
45	Variation of the velocity of the upper end of the hydraulic damper with its stiffness ( K ).
46	Variation of the displacement of the upper end of the hydraulic damper with the displacement of its lower end at different values of the hydraulic damper stiffness ( K ).
47	Variation of the velocity of the upper end of the hydraulic damper with the displacement of its lower end at different values of the hydraulic damper stiffness ( K ).
48	Variation of the equivalent damping coefficient of the hydraulic damper in a rebound stroke with the velocity of its lower end at different frequencies of excitation .
49	Variation of the equivalent damping coefficient of the hydraulic damper in a bound stroke with the velocity of its lower end at different frequencies of excitation .

Notation

$X$	Displacement of the lower end of the hydraulic damper.	(m)
$X_0$	Amplitude of displacement of the lower end of the hydraulic damper.	(m)
$\dot{X}$	Velocity of the lower end of the hydraulic damper	(m/sec.)
$\dot{X}_0$	Amplitude of velocity of the lower end of the hydraulic damper.	(m/sec.)
$Y$	Displacement of the upper end of the hydraulic damper.	(m)
$Y_0$	Amplitude of displacement of the upper end of the hydraulic damper.	(m)
$\dot{Y}$	Velocity of the upper end of the hydraulic damper.	(m/sec.)
$\dot{Y}_0$	Amplitude of velocity of the upper end of the hydraulic damper.	(m/sec.)
$\ddot{Y}$	Acceleration of the upper end of the hydraulic damper.	(m/sec. <sup>2</sup> )
$f$	Frequency of excitation	(Hz)
$t$	time	(sec.)
$m_1$	mass of the lower end of the hydraulic damper.	(kg)
$m_2$	mass of the upper end of the hydraulic damper.	(kg)
$F_f$	Coulomb-friction force	(N)
$F_r$	The output force in the rebound stroke of the hydraulic damper.	(N)
$F_c$	The output force in the bound stroke of the hydraulic damper.	(N)

$C_t$	Damping coefficient of the hydraulic damper in a rebound stroke.	(N.s/m)
$C_c$	Damping coefficient of the hydraulic damper in a bound stroke.	(N.s/m)
$C_{eq_t}$	Equivalent damping coefficient of the hydraulic damper in a rebound stroke.	(N.s/m)
$C_{eq_c}$	Equivalent damping coefficient of the hydraulic damper in bound stroke.	(N.s/m)
$C_1$	Damping coefficient of the rubber seat.	(N.s/m)
$K_1$	Stiffness of the rubber seat.	(N/m)
$K$	Stiffness of the hydraulic damper.	(N/m)
