CEREBROVASCULAR STROKS DURING PREGNANCY AND PURPERIUM

Cerebrovascular stroks during pregnancy and purperium is a calamity. although the risk of death far lower than that of subarachnoid hemorrhage. there are many risk factors in C.V.S. during pregnancy and puerperium; cardioembolic disorders, arterial diseases, hematological disease and hypertensive disorders during pregnancy, pre-eclampsia and eclampsia C.V.S. during pregnancy requires a full diagnostic working as in the non pregnant cases. treatment will not differ from that in non pregnant cases except for the risk of teratogenic effects of some drugs.

Keywords :

- Pregnancy complications.
- Cerebrovascular diseases.
- Stroke - Eclampsia, cerebral complications.
- Postpartum angiopathy.
