

STUDIES ON THE USE OF STARTERS
IN THE MANUFACTURE OF CHEESE
FROM SOYA BEAN MILK

663.64
N.H

BY

Narges Hassan Mohamed

B.Sc. (Agric) Alexandria University 1967

M.Sc. (Dairy Science) Alexandria University 1973

THESIS

Submitted in Partial Fulfilment of
the Requirements for the Degree of
Doctor of Philosophy

Ph.D. 48
16221

To

Food Science Department
Faculty of Agriculture
Ain Shams University

1983

APPROVAL SHEET

Title : Studies on the use of starters in the
manufacture of cheese from soya bean
milk .

Name : Narges Hassan Mohamed

This thesis for the **Ph.D.** Degree has
been approved by :

Prof. L. B. adany

Prof. M. I. Abd El

Prof. H. H. H.

Committee of charge

Date : 3 / 9 / 1983

6

To my husband
and my daughters for
all they have done for me

ACKNOWLEDGEMENT

The auther would like to express her gratitude with deep thanks to Prof. A.A. Hofi, Prof. A.E. Shehata , Professors of Dairying, Food Science Department, Faculty of Agriculture, Ain Shams University, and to Prof. Kh.M. Naguib, Head of Dairy Laboratory, National Research Centre, for planning the research program, their direct supervision, reviewing the manuscript, and facilities they offered during this study.

Gratful acknowledgement would be extended to Dr. M.N.I. Magdoub, Associate Professor of Dairying, Ain Shams University, for reviewing the manuscript. Also for every possible help and guidance he kindly offered throughout this study .

Sincere thanks and appreciation should be expressed to Prof. M.M. Naguib, at food Industry and Dairy Lab., National Research Centre for research planning, supervision and guidance he kindly offered throughout this study . As well as to Dr. S.A.A. El-Nockrashi , for every possible help she kindly offered throughout this study .

Thanks are due to Mr. Agric. Ing. M. Sobhy, Chairman; Dr. A. Halafawi, General Manager; and Dr. M.N. El-Mourshedy, Chief of Research and Development Lab., Misr Milk and Food

✓
Company, for their keen interest in this topic as well as materials and technical facilities they offered.

Thanks also are due to the staff members of Food Industry and dairy Lab., National Research Centre and Research and Development Lab., M.M.F.C. for Co-operation and help they devoted during this study.

INTRODUCTION	1
REVIEW OF LITERATURE	3
I. Soy bean	3
A. Chemical composition	3
1- Major chemical composition	3
2- Sugar content	6
3- Protein fractions and thier detection	7
4- Amino acids	10
B. Oil indexes	12
C. Soy bean trypsin inhibitor.....	13
II. Soy bean milk	17
III. Soy bean cheese.....	21
A. Curd preparation.....	21
B. Growth and activity of lactic starters in soy milk.	22
C. Manufacture of cheese.....	27
MATERIALS AND METHODS.	32
I. Soy bean	32
A. Source	32
B. Samples preparation	32
C. Methods of analysis	32
1. Moisture content	32
2. Total protein content	32
3. Oil content	32
4. Total carbohydrates content	33

	Page
5. Fiber content of soy bean	34
6. Ash content	34
7. Soy bean sugars' identification	34
8. Protein fractions	37
9. Oil indexes	42
10. Determination of trypsin inhibitor activity.	45
II. Soy bean milk preparation and properties ...	
A. Soy been milk preparation and chemical composition :	
1- Total solids	48
2- Titratable acidity	48
3- Fat content.	49
4- Total nitrogen	49
B. Growth and activity of lactic acid bacteria in soy milk.	
- Cultures	49
1. Growth ability	50
2. Acid production	50
3. Lipolytic activity	51
4. Proteolytic activity	53
III. Soy milk cheese	54
A. Source of milks	54
B. Ras cheese making	54
C. Sampling	54

	Page
D. Methods of chemical analysis	55
1- Moisture content.	55
2- Titratable acidity and pH	55
3- Fat content	55
4- Salt content	55
5- Total nitrogen content	55
6- Soluble nitrogen	56
7- Total volatile acidity	56
E. Methods of bacteriological analysis.....	56
1. Total bacterial count	56
2. Lactic acid bacterial count	57
3. Lactobacilli count	57
4. Enterococi count	57
5. Coliforms bacterial count.	57
6. Lipolytic bacterial count.	58
7. Proteolytic bacterial count	58
8. Aerobic spore formers count	58
9. Anaerobic spore formers count	59
F. Scoring the cheese	59
G. Statistical analysis	59

RESULTS AND DISCUSSION :

Part I.

- Comparison and properties of some soy bean varieties.	60
- Experimental	60

	Page
- A : Chemical composition	62
(1) Major chemical composition	62
a- Moisture content	62
b- Total protein conten	65
c- Oil content	68
d- Carbohydrate content	70
e- Fiber content	71
f- Ash content	73
(2) Sugars identification	74
(3) Protein fractions	74
B: Oil indexes	81
C: Trypsin inhibitor	83
Part II.	
- Soy milk preparation and properties	87
- Experimental	87
- A : Effect of extraction ratio and grinding soy bean on some properties of soy milk: ..	91
(1) Extraction ratio	91
(2) Grinding soy beans	94
- B : Growth ability and activity of some lactic culture in soy milk	96
(1) Growth ability	96
(2) Acid production	97
(3) Proteolytic activity	100
(4) Lipolytic activity	103

- C : A comparison study in growth ability and activity of some lactic culture in soy milk and other milks 107
 - (1) Growth ability : 107
 - (2) Acid production : 112
- D : Some factors affect growth ability and activity of some lactic cultures in soy milk..... 115
 - (1) Heat treatment 115
 - (2) Some nutritive additives 119

Part III.

Properties and ripening changes of Ras cheese manufactured from soy milk 125

- Experimental 125
- A. Chemical properties of cheese 128
 - (1) Moisture content..... 128
 - (2) PH value :..... 138
 - (3) Titratable acidity 148
 - (4) Fat content 158
 - (5) Salt content 168
 - (6) Total volatile acidity content 179
 - (7) Total nitrogen 190
 - (8) Soluble nitrogen 200
 - (9) Soluble/Total nitrogen 210

	Page
B. Bacteriological properties of cheese	222
(1) Total bacterial count	222
(2) Lactic acid bacterial count	226
(3) Lactobacilli count	230
(4) Streptococci count	234
(5) Faecal streptococci count	238
(6) Coliform bacterial count	248
(7) Aerobic spore formers count	252
(8) Anaerobic spore formers count	256
(9) Proteolytic bacterial count	257
(10) Lipolytic bacterial count	261
C. Sensory properties of cheese	266

LIST OF TABLES

Table N°	Page
1	Chemical composition of soy bean mentioned by several workers.:..... 4
2	Chemical composition of 10 varieties of soy bean grown in 5 location during 5 years..... 5
3	Sugars of U.S. and Japanese soy bean varieties (Kawamura & Toda, 1967)..... 8
4	The amino acids content of soy bean reported by some investigators..... 11
5	Oil indexes as reported by some inve- stigators..... 14
6	The composition of soy bean milk, mentioned by some investigators..... 20
7	The sequence followed for adding the reagents to determine the trypsin inhibitor activity in the crud or heat treated soy bean extracts.....47
8	Chemical composition of whole and debuted soy bean varieties..... 63

Table N°		page
9	Percentage of variation in chemical composition of soy bean varieties as affected by dehulling.....	66
10	R.F values of sugar references.....	75
11	R.F values of soy bean varieties' expected sugars.....	75
12	The distribution and concentration of peaks of the fractions of soy bean protein.....	79
13	Values of some indexes of soy bean oil variety "Clark".....	82
14	Effect of heat treatment of the activity of soy bean trypsin inhibitor.....	84
15	Incubation temperatures of the lactic acid cultures of the lactic acid cultures used.....	89
16	Effect of extraction ratio (soy bean: tap water) on the yield, composition and recovery percentage of the resultant soy milk.....	92

Table.No		Page
17	Effect of grinding soy beans on yield, composition and recovery of the resultant soy milk.....	95
18	Total count and multiplication rate of some lactic cultures on soy milk.....	98
19	Titrateable acidity (T.A. %) as a lactic acid of soy milk inoculated with some lactic cultures.....	101
20	Changes in non-protein nitrogen (N.P.N.) of soy milk inoculated with some lactic cultures, <u>Bacillus cereus</u> and rennet....	104
21	Lipolytic activity of some lactic cultures on soy bean oil and tributyrin.....	106
22	Total count and multiplication rate of some lactic cultures in soy, cow and recombined milk.....	108
23	Titrateable acidity (T.A. %) as a lactic acid of soy, recombined and cows' milks inoculated with some lactic cultures.....	113
24	Titrateable acidity (T.A.%) of heat treated soy milk which was inoculated by some lactic cultures and incubated for 16h...	116
