

HAEMOPHILIAS (A & B) MOLECULAR BIOLOGY, DIAGNOSIS AND MANAGEMENT

M. Sc. Essay

**Submitted in partial fulfillment of the Master Degree in
Clinical and Chemical Pathology**

By

**Dr. Khalid Abd El Baky Farhat
M.B., B. CH**

Acknowledgment

First of all, thanks to God. Words can never express my deepest gratitude and appreciation to Prof. Dr. Nevine Ahmed Kassim, Professor of Clinical Pathology, Ain Shams University, for her great supervision and faithful guidance.

My particular and deepest thanks are expressed to Dr. Hoda Mohamed El Gendy, Lecturer of Clinical Pathology, Ain Shams University, for her great support and help.

I wish to express my thanks and gratitude to Dr. Afaf Abd El-Aziz Abd El-Ghaffar, Lecturer of Clinical Pathology, Ain Shams University, for her valuable comments and generous advice in preparing and completing this work.

Finally, no words could even express my deepest gratitude to my mother, all members of my family and my dear Hala.

TABLE OF CONTENTS

	Page
INTRODUCTION TO HAEMOPHILIA	1
REVIEW OF LITERATURE	
1. Molecular Biology of Factor VIII	8
Purification of factor VIII	9
Structure of factor VIII	10
Association of factor VIII with vWF	13
Biosynthesis and metabolism of factor VIII	13
Biological functions of factor VIII	15
Regulation of factor VIII a activity	15
Proteolytic activation of factor VIII	16
Proteolytic & nonproteolytic inactivation of F.VIII	18
2. Molecular Biology of Factor IX	20
Structure and physical properties of factor IX	20
Purification of factor IX	20
Biosynthesis and metabolism of factor IX	23
The role of factor IX a in the intrinsic f.X activating complex	25
Proteolytic activation of factor IX	26
Inactivation of factor IX a	27
3. Molecular Defects in Haemophilia	29
Factor VIII gene defects	29
Gross DNA rearrangements	30
Chromosomal Rearrangement	33
Breakpoints involving factor VIII gene	33
Point mutations and small deletions/insertions	33
mRNA splicing errors	39
Mutations in CRM positive & CRM negative patients	39

Table of Contents (Cont'd)

Molecular Defects in Haemophilia	B	40
4. Diagnosis of haemophilia		45
Laboratory diagnosis		45
Prenatal diagnosis and carrier detection		48
Molecular Biology in Blood Coagulation		52
Differential Diagnosis of Haemophilia		67
5. Treatment Of Haemophilia		72
Treatment of haemophilia A		73
Treatment of minor or moderate haemorrhage		78
Treatment of major haemorrhage		79
Surgery		80
Home therapy		80
Treatment of haemophilia B		81
Antibody Inhibitors of F. VIII and F. IX		84
Gene Therapy		88
SUMMARY		96
REFERENCES		99
ARABIC SUMMARY		120

LIST OF TABLES

	Page
Table (1) Properties of factor VIII and IX proteins & their genes	8
Table (2) Factor VIII cleavage sites	17
Table (3) Haemophilia A database summary	29
Table (4) Haemophilia B database summary	41
Table (5) Characteristics of variant forms of Willebrand disease	53
Table (6) Types of DNA probe	70
Table (7) Replacement therapy in haemophilia A and haemophilia B	75
Table (8) Principles of gene therapy	89
Table (9) Potential deletion systems for gene therapy	91

LIST OF FIGURES

	Page
Figure (1) The inheritance of haemophilia A and haemophilia B	2
Figure (2) Schematic representation of the chromosomal localization and structure of the factor VIII gene	10
Figure (3) Structure of human factor VIII gene and protein	11
Figure (4) Factor VIII cleavage site mutations	17
Figure (5) Structure of human profactor IX showing the location of the seven introns (A to G) of the factor IX gene	21
Figure (6) Proteolytic activation of factor IX	27
Figure (7) a] Schematic representation of the mechanism of the common type 1-inversion of the factor VIII gene b] Southern blot analysis for the recognition of type 1-inversion of the factor VIII gene	30
Figure (8) Missense mutations and single aminoacid deletions in the factor VIII protein	36
Figure (9) Preparation of a cDNA probe by reverse transcription	53
Figure (10) Characteristics of some restriction enzymes	55
Figure (11) A schematic representation of Southern blotting	56
Figure (12) Scheme indicating how a single DNA probe may hybridize to several different fragments of target DNA after Southern blotting	60
Figure (13) The use of dot blotting to compare DNA from three different individuals	62

LIST OF FIGURES (Cont'd)

Figure (14)	The principle of the polymerase chain reaction (PCR)	64
Figure (15)	PCR using the nested-primer technique	66
Figure (16)	The combined use of a disabled helper retrovirus and a recombinant retrovirus, containing cDNA from the gene of interest to transfect recipient cells	92
Figure (17)	Gene targetting by homologous recombination	94

ABBREVIATION

aa	:	amino acid
APC	:	Activated protein C
APCCs	:	Activated prothrombin complex concentrates
APTT	:	Activated partial thromboplastin time
AT III	:	Anti-thrombin III
B.W.	:	Body Weight
CRM	:	Cross Reacting Material
CVS	:	Chorionic Villus Sampling
DDAVP	:	1-deamino 8-D-arginine vasopressin
EDTA	:	Ethylenediaminetetra acetic acid
EGF	:	Epidermal growth factor
ELISA	:	Enzyme linked immunosorbent assay
F.	:	Factor
HIV	:	Human immunodeficient virus
Ig	:	Immunoglobulin
IRMA	:	Immunoradiometric assay
Mr.	:	Molecular weight
nt	:	Nucleotide
PCC	:	Prothrombin Complex Concentrates
PCR	:	Polymerase chain reaction
PTT	:	Partial thromboplastin time
RFLP	:	Restriction fragment length polymorphisms
RVV X	:	Russel's viper venom protease
TGT	:	Thromboplastin generation test
vWD	:	von Willebrand disease
vWF	:	von Willebrand factor

Introduction To Haemophilia
