

THE GEOLOGY AND MINERALOGY OF NUBIAN SANDSTONES FROM WADI NATASH AND KOM OMBO DISTRICTS

THESIS

Submitted for the Ph. D Degree
(*Geology*)

By

HAFEZ SHAMS EL-DEEN ABD EL-WAHAB

B. Sc. (Hons.), M.Sc.

INTRODUCTION	1
 CHAPTER ONE:	
GEOLOGICAL STUDIES AND SAMPLING	5
I- Location of the area under investigation	5
II- Previous work on the Geology of the Nubian sandstones	5
III- Geology of the Nubian sandstones in Kom Ombo-Wadi Natash area	8
1) Wadi Kharit sections	9
2) Wadi Natash sections	12
3) Hour Akarim sections	16
IV- Primary structures encountered in the Nubian sandstones	18
1) Stratification	18
2) Graded bedding	19
3) Ripple Marks	20
 CHAPTER TWO:	
GRAIN SIZE ANALYSIS OF NUBIAN SANDSTONES	22
I- Grain-size analysis of Nubian sandstones from Wadi Kharit	25
II- Grain-size analysis of Nubian sandstones from Wadi Natash	29
III- Grain-size analysis of Nubian sandstones from Hour Akarim area	31
IV- The inter-relationship of the grain-size parameters	39
1) The relationship between Mean Size and Inclusive Graphic Standard Deviation	40
2) The relationship between Mean Size and Coarseness	40
3) The relationship between Mean Size and Kurtosis	42
The Discriminant Functions of Sabu	43

CHAPTER THREE:

PETROGRAPHY OF THE NUBIAN SANDSTONES	51
I- Silica overgrowth and other silica reactions	52
II- Iron-oxide staining and "Redoxomorphic charges"	54
III- Calcite and calcite reactions	55
IV- Clay minerals and X-ray analysis	56

Modal analysis and the classification of sandstones	62
Shape Analysis	64

CHAPTER FOUR:

MINERALOGY OF THE NUBIAN SANDSTONES	67
I- General considerations	67
II- Mineralogy of the light fractions	68
Types of Quartz	69
III- Mineralogy of the heavy fractions	72
A. Non-opaque heavy minerals	72
1) Tourmaline	82
2) Zircon	84
3) Anatase and Rutile	90
B. Opaque heavy minerals	92
1) Hematite	92
2) Magnetite	93
3) Ilmenite	94
4) Pyrite	95

CHAPTER FIVE:

MINERALOGY OF THE NUBIAN SANDSTONES

I- General considerations

II- Geochemical evaluation of sandstones ..	96
---	----

CHAPTER SIX:

VOLCANIC ROCKS ASSOCIATED WITH THE NUBIAN SAND- STONES	100
I- General considerations	100
II- Petrography of volcanic rocks	106
1) Volcanic breccia	106
2) Trachytic rocks	108
3) Porphyritic rocks	111

CHAPTER SEVEN:

CHEMISTRY OF VOLCANIC ROCKS AND SEQUENCE OF VOLCANIC ACTIVITY	114
I- Chemistry of volcanic rocks	114
II- Sequence of volcanic activity	122
SUMMARY AND CONCLUSION	124
REFERENCES	138
ARABIC SUMMARY	...

LIST OF FIGURES

Figure		After Page
1	Location map of the investigated area	5
2	Geological map of the south Eastern Desert of Egypt	8
3	Vertical section of Nubian sandstone (K ₁), south of Wadi Kharit	10
4	Vertical section of Nubian sandstone (K ₂), north of Wadi Kharit	11
5	Vertical section of Nubian sandstone (N ₁), north of Wadi Natash	13
6	Vertical section of Nubian sandstone (N ₂), south of Gizeret Khasha Natash ..	14
7	Sketch block diagram showing the lateral sampling of Nubian sandstone near the volcanics of Gebel El-Muhud South(N ₃)..	15
8	Vertical section of Nubian sandstone(H), Hour Akaria, overlying the basement rocks	17
9	"Average" trend of cumulative curves of Kharit vertical sections K ₁ and K ₂ ...	25
10	Cumulative curve showing the "average" trend for Kharit sporadic samples ...	25
11	"Average" trend of cumulative curves of sandstones from Wadi Natash: N ₁ (verti- cal section), N(SP) sporadic samples ..	29
12	"Average" trend of cumulative curves of sandstones from Hour Akaria; H; vertical section and H(SP); sporadic samples ...	32
13	Relationship between sorting and mean size	40
14	Relationship between skewness and mean size	41
15	Relationship between kurtosis and mean size	42

Figure		After Page
16	Photomicrograph of a thin section of Nubian sandstone from Wadi Kharit, showing single quartz grains with undulose extinction	51
17	Photomicrograph of a thin section of Nubian sandstone, from Wadi Natash, showing a composite quartz grain, cracked and exhibiting undulose extinction	51
18	Photomicrograph of a thin section of Nubian sandstone from Wadi Natash, showing secondary overgrowth of silica	52
19	Photomicrograph of a thin section of Nubian sandstone from Wadi Kharit, showing considerable overgrowth of silica	52
20	Photomicrograph of a thin section of Nubian sandstone from Wadi Kharit, showing opal surrounded by chalcedony	53
21	Photomicrograph of a thin section of Nubian sandstone from Wadi Natash, showing chalcedony in micro-fractures of quartz grains	53
22	Photomicrograph of a thin section of Nubian sandstone from Wadi Natash, showing iron oxides filling the interspaces between quartz grains	54
23	Photomicrograph of a thin section of Nubian sandstone from Wadi Kharit, showing corroded quartz grains embedded in iron oxide matrix	54
24	Photomicrograph of a thin section of Nubian sandstone from Wadi Kharit, showing calcite filling the interspaces between quartz grains	55
25	Photomicrograph of a thin section of Nubian sandstone from Wadi Kharit, showing embayments of quartz grains due to replacement by calcite	55

Figure		After Page
26	Photomicrograph of a thin section of Nubian sandstone from Wadi Kharit, showing clay matrix between quartz grains	57
27	Photomicrograph of a thin section of Nubian sandstone from Wadi Natash, showing clay matrix replaced by calcite	57
28	X-ray diffraction pattern of the clay fraction of Nubian sandstone samples	58
29	Classification of Nubian sandstones according to Chen's method	63
30	Frequency distribution of light minerals ..	67
31	Frequency distribution of light minerals ..	68
32	Frequency distribution of types of quartz .	70
33	Frequency distribution of opaque minerals .	72
34	Frequency distribution of non-opaque heavy minerals	77
35	Frequency distribution of schorlite and elbaite	82
36	Triangular diagram showing distribution of blue, green and rosy tourmalines	82
37	Frequency distribution of coloured zircons	85
38	Frequency distribution of zoned zircons ...	85
39	Photomicrograph of zircon showing needle-shaped inclusions	86
40	Photomicrograph of zircon showing acicular and liquid (or gaseous) inclusions	86
41	Photomicrograph of zircon showing rounded (anhedral) inclusions	86
42	Photomicrograph of zircon showing rounded inclusions	86

Figure		After Page
43	Frequency distribution of inclusions in zircons	86
44	Triangular diagram showing distribution of euhedral, subhedral and anhedral zircons	87
45	Frequency distribution of length of zircons	89
46	Frequency distribution of breadth of zircons	89
47	Photomicrograph of well-developed anatase grain, showing striations and opaque inclusions	91
48	Photomicrograph of anatase grain showing the (111) faces	91
49	Photomicrograph of a twin of anatase ..	91
50	Photomicrograph of an almost opaque grain of anatase	91
51	Relationship between anatase and rutile percentages	91
52	Photomicrograph of a polished section showing a hematite grain, the hematite had replaced almost all the magnetite .	92
53	Photomicrograph of a polished section showing a magnetite grain altered to hematite	92
54	Photomicrograph of a polished section showing remnants of magnetite	92
55	Photomicrograph of a polished section showing a magnetite grain with small patches of hematite	92
56	Photomicrograph of a polished section of a hematite grain with rutile needles	93

Figure		After Page
57	Photomicrograph of a polished section of a hematite grain with exsolution of ilmenite	93
58	Photomicrograph of a polished section showing an ilmenite grain with "lakes" of exsolved hematite	93
59	Photomicrograph of a polished section showing ilmenite-hematite and hematite-ilmenite exsolutions	93
60	Major oxide composition of samples of Nubian sandstones	99
61	Location map of the studied volcanic rocks	105
62	Photomicrograph of a thin section of volcanic breccia from Wadi Natash	107
63	The same as Fig. 62, but between crossed Nicols	107
64	X-ray powder diffraction of a volcanic breccia from Wadi Natash	107
65	Photomicrograph of a thin section of a trachyte from Wadi Natash	110
66	Photomicrograph of a thin section of a trachyte from Wadi Natash	110
67	X-ray powder diffraction of a trachyte .	110
68	X-ray powder diffraction of an albitized trachyandesite	110
69	Photomicrograph of a thin section of albitized trachyte showing patches of iron oxides	110
70	Photomicrograph of a thin section of albitized trachyandesite showing veinlets of iron oxides between the microlites of the groundmass	110

Figure		After Page
71	Photomicrograph of a thin section of basalt showing a large phenocryst of plagioclase feldspar, twinned and zoned	113
72	Photomicrograph of a thin section of basalt, showing a large phenocryst of olivine with "iddingsite" filling cracks	113
73	Photomicrograph of a thin section of highly albitized basalt, with amygdules of zeolites	113
74	X-ray powder diffraction of a highly albitized basalt	113
75	The relationship between SiO_2 and alkalis for the volcanic rocks ² of Wadi Natash	119
