## *Acknowledgment*

I would like to express my sincere appreciation and deepest gratitude to **Prof. Dr. Moahmed Hamed Shaker**, Professor of Anesthesia and Intensive Care, Faculty of Medicine, Ain Shams University, for his moral support and continuous encouragement. Really, it is a great honor to work under his supervision.

My deepest appreciation and grateful thanks to **Prof. Dr. Ibrahim Abd El-Ghany Ibrahim**, Professor of Anesthesia and Intensive Care, Faculty of Medicine, Ain Shams University, for his great support and encouragement throughout the course of this work.

My grateful thanks are also due to **Prof. Dr. Ahmed Abd El-Aala El-Shawarby**, Assistant Professor of Anesthesia and Intensive Care, Faculty of Medicine, Ain Shams University, for his patience and tremendous effort he has done in the meticulous revision of the whole work.

I am also grateful to the professors and all the working staff in the Intensive Care Unit, Ain Shams University Specialized Hospital, for their cooperation and understanding.

My thanks are also due to all my professors and colleagues in the Department of Anesthesia and Intensive Care, Ain Shams University, for their outstanding assistance.

***Samir Ateya Naoum***

# List of Contents

	<b>PAGE</b>
<b>Introduction and Aim of the Work</b>	<b>1 – 2</b>
<b>Review of Literature</b>	<b>3 – 69</b>
Indications of Mechanical Ventilation	3 – 4
Classification of Ventilators	5 – 9
Modes of Positive Pressure Ventilation	10 – 24
Positive End-Expiratory Pressure (PEEP)	25 – 28
Monitoring During Mechanical Ventilatory Support	29 – 43
Weaning From Mechanical Ventilation	44 – 55
Difficult Weaning From Mechanical Ventilation	56 – 69
<b>Patients and Methods</b>	<b>70 – 71</b>
<b>Results</b>	<b>72 – 86</b>
<b>Discussion</b>	<b>87 – 94</b>
<b>Conclusion and Recommendations</b>	<b>95 – 97</b>
<b>Summary</b>	<b>98 – 99</b>
<b>References</b>	<b>100 – 114</b>
<b>Arabic Summary</b>	<b>1 – 3</b>

# List of Tables

No.	Table	Page
Table (1):	Standard weaning predictors.	45
Table (2):	Causes of ventilatory pump failure.	58
Table (3):	Causes of LV dysfunction during weaning from MV.	68
Table (4):	Comparison of mean age and duration of MV between the two groups.	72
Table (5):	Indications of MV.	74
Table (6):	Modes of weaning.	75
Table (7):	Comparison of ventilatory criteria between the two groups.	76
Table (8):	Comparison of gas exchange criteria between the two groups.	80
Table (9):	Comparison of EF and 24-hour fluid balance between the two groups.	83
Table (10):	Comparison of serum albumin, Mg, and PO <sub>4</sub> levels between the two groups.	85

# List of Figures

No.	Figure	Page
Figure (1):	The IMV circuit.	12
Figure (2):	Airway pressure tracing in different ventilatory modes.	20
Figure (3):	The normal trace of the capnogram.	31
Figure (4):	Proximal airway pressure tracing.	37
Figure (5):	Comparison between age of patients in the two groups.	73
Figure (6):	Comparison between duration of mechanical ventilation in the two groups.	73
Figure (7):	Modes of weaning in the two groups.	75
Figure (8):	Comparison of respiratory rate (RR) between the two groups.	77
Figure (9):	Comparison of minute volume (VE) between the two groups.	77
Figure (10):	Comparison of tidal volume (VT) and vital capacity (VC) between the two groups.	78
Figure (11):	Comparison of maximum inspiratory pressure (MIP) between the two groups.	78
Figure (12):	Comparison of VT/RR between the two groups.	79
Figure (13):	Comparison of PaO <sub>2</sub> between the two groups.	81
Figure (14):	Comparison of PaO <sub>2</sub> / FiO <sub>2</sub> between the two groups.	81
Figure (15):	Comparison of PaCO <sub>2</sub> between the two groups.	82
Figure (16):	Comparison of pH between the two groups.	82
Figure (17):	Comparison of ejection fraction (EF) between the two groups.	84
Figure (18):	Comparison of 24-hour fluid balance between the two groups.	84
Figure (19):	Comparison of serum albumin between the two groups.	86
Figure (20):	Comparison of serum magnesium and phosphate between the two groups.	86
