

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

﴿وَلَقَدْ خَلَقْنَا الْإِنْسَانَ مِنْ سُلَالَةٍ مِنْ طِينٍ ﴿١٣﴾ ثُمَّ جَعَلْنَاهُ نُطْفَةً فِي قَرَارٍ مَكِينٍ ﴿١٤﴾ ثُمَّ خَلَقْنَا النُّطْفَةَ عَلَقَةً فَخَلَقْنَا الْعَلَقَةَ مُضْغَةً فَخَلَقْنَا الْمُضْغَةَ عِظًا مَّا فَكَّسْنَا الْعِظَامَ لَحْمًا ثُمَّ أَنْشَأْنَاهُ خَلْقًا ۖ آخِرُ فَتَبَارَكَ اللَّهُ أَحْسَنُ الْخَالِقِينَ ﴿١٥﴾﴾ سورة المؤمنون

THYROID FUNCTION TESTS IN THE HIGH - RISK NEWBORN

A THESIS

Submitted For the Partial Fulfillment

of

M. D. DEGREE

IN

PAEDIATRICS

By

NAGWA FATHI HAMDI

M. B. ch. M.S.

Supervised by

DR. SAADIA MOHAMMED ABDEL FATTAH

Professor of Paediatrics - Ain Shams University

DR. SAWSAN AMIN AL SOKKARI

Professor of Paediatrics - Ain Shams University

DR. L. V. DEVARAJAN

Ass. Professor of Paediatrics - Kuwait University

FACULTY OF MEDICINE

AIN SHAMS UNIVERSITY

**To my husband,
Dr. Mohammed Matar**

and

**My children,
Mohammed, Amr and Doha
who were very considerate
and supportive.**

**To my father,
Mr. Fathi Hamdi
who has been extremely
helpful and supportive
althrough
I convey my thanks
and deep gratitude**

ACKNOWLEDGEMENT

I am greatly indebted to Professor Dr. Saadia Mohammed Abdel Fattah and to Professor Dr. Sawsan Amin Al Sokkari for their helpful advice and critical review of the work and for dedicating part of their valuable time evaluating the study and directing me through valuable criticism to put this work in a more or less proper presentation.

I greatly acknowledge the support and guide offered by Assistant Professor Dr. L.V. Devarajan without whose cooperation this study would not have been possible.

I appreciate the excellent technical assistance offered by Dr. Oneiz Al Oneizi, Head of the Endocrinology laboratories at Al Sabah hospital- Kuwait.

I would also wish to thank the technicians of the Endocrinology laboratories at Al Sabah hospital, Kuwait, for their effort in radioimmunoassay hormone determinations.

I convey my warm thanks to all the nursing staff in special care baby units and labour wards at maternity hospital- Kuwait for their great help.

ABBREVIATIONS

LIST OF ABBREVIATIONS

AFD : Appropriate-for-date.
ELBW : Extremely low birth weight.
F.T. : Fullterm
FT₄ : Free thyroxine.
FTI(FT₄I) : Free thyroxine index.
G.A. : Gestational age.
LSCS : Lower segment caesarean section
P.T. : Preterm
RD : Respiratory distress.
RDS : Respiratory distress syndrome.
RIA : Radioimmunoassay.
rT₃ : Reverse tri-iodothyronine.
SFD : Small-for-date.
SVD : Spontaneous vaginal delivery.
t : T-test
T₃ : Tri-iodothyronine.
T₃UR : T₃ uptake ratio.
T₄ : Thyroxine
TBG : Thyroxine-binding globulin.
Tg : Thyroglobulin.
TRH : Thyrotropin-releasing hormone.
TSH : Thyrotropin
VE : Vacuum extraction
VLBW : Very low birth weight.

ADULT HORMONE VALUES

Thyroxine (T_4)	65_150 nmol/L
Free thyroxine (FT_4)	10_21 pmol/L
Thyroid Stimulating Hormone (TSH)	up to 10 uIU/L
Triiodothyronine (T_3)	1.2_3.4 nmol/L
Reverse triiodothyronine (rT_3)	0.14_0.54 nmol/L
Thyroxine Binding Globulin (TBG)	12_32 mg/L (12_32 ug/ml)
Triiodothyronine Uptake Ratio (T_3UR)	25.5_34.4%
Free Thyroxine Index (FT_4I)	16.7_51.6

INTRODUCTION

INTRODUCTION

During fetal life the central nervous system and the neuroendocrine transducer systems are probably not of vital importance to fetal survival or growth; the maternal-placental unit provides a constant supply of growth and energy substrate and maintains respiratory and excretory activities. The capacity of the newborn to survive the stresses of parturition and to function independently in the extra-uterine environment is impressive and is due in no small measure to the functional state of his limbic system or "visceral brain" inducing its hypothalamic-endocrine-motor effector pathways. Present information would suggest that most of these pathways are functional near term and perhaps by midgestation. The neuroendocrine mechanisms for stimulating the secretion of catecholamines and thyroid hormones, seem to be intact and smoothly operative at birth (*Fisher, 1976*).

The recent implementation of screening programs for the detection of congenital hypothyroidism has focused attention on the unique thyroid physiology and pathophysiology of the newborn. A high prevalence of both transient and permanent disorders of thyroid function has been observed.

Thyroid function is in a state of flux during the perinatal period. Thyroid hormones even though not essential for
