EFFECT OF γ - IRRADIATION ON SOME MEMBERS OF ACETOBACTERACEAE

**A Thesis
Submitted In Partial Fulfillment For The
Requirements For The Master Degree of Science
In
Microbiology**

under the supervision of

Prof. Dr. Mohamed Ibrahim H. Mahmoud

Prof. of Microbiology

Botany Department

Women's College

Ain Shams University

Dr. Soad S. Abdel-aal

Assist. prof. of Microbiology

National Center for Radiation

Research & Technology

Dr. Hassan Gebreel

Lecturer of Microbiology

Faculty of Science

Ain Shams University

**Botany Department
Women's College
Ain Shams University
1992**

Theoretical Courses

- 1- Enzymology.
- 2- Microbial biochemistry.
- 3- Methodology.
- 4- Biostatistics.
- 5- Nitrogen fixation.
- 6- Applied microbiology.
- 7- Scientific english.
- 8- Microbial ecology.

The above post graduate courses have been attended and passed successfully on (1989), as a partial fulfillment for the requirements of master degree of science, by ***Abeer Emam Mohamed Zakaria.***

ACKNOWLEDGEMENT

I would like to present my profound gratitude to Dr. Mohamed Ibrahim H. Mahmoud, Professor of Microbiology, Botany Department, Women's College, Ain Shams University for his kind supervision, valuable advices and informations, continuous encouragement and unlimited help in preparing this thesis.

I would like also to express my great thanks and my gratefulness to Dr. Soad S. Abdel-aal, Assistant professor of Microbiology, National Center for Radiation Research and Technology (NCRRT), for her continuous guidance, great encouragement and supervising the work.

My sincere thanks to Dr. Hassan Gebreel, Lecturer of Microbiology, Botany Department, Faculty of Science, Ain Shams University for his valuable help, criticism and kind supervision

I would like also to thank the members of Microbiology Department and Pharmacology Department, Faculty of pharmacy, Zagazig University for their valuable help in an important practical part of this thesis.

Thanks are also due to my colleagues in Botany Department, Women's College, Ain Shams University and in Microbiology Department and Chemistry Department, National Center for Radiation Research and Technology (NCRRT) for their cooperation and sincere help.

Abeer Emam

TABLE INDEX

	Page
Table (1) : Identification and sources of bacterial isolates.....	35
Table (2) : Biochemical characters of <i>Acetobacter</i> and <i>Glucono-</i> <i>bacter</i>	36
Table (3) : Antagonistic properties of test isolates of <i>Acetobacter</i> and <i>Gluconobacter</i>	45
Table (4) : Antagonistic properties of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i>	47
Table (5) : Productivity of antimicrobial agent at different growth phases of <i>Acetobacter liquefaciens</i> at 28°C with shaking at 20 rpm.....	51
Table (6) : Productivity of antimicrobial agent at different growth phases of <i>Gluconobacter oxydans</i> at 28°C with shaking at 20 rpm.....	56
Table (7) : Comparison between the activity of the antimicrobial substance produced by <i>Gluconobacter oxydans</i> and that of ampicillin	62
Table (8) : Effect of dose rate 0.058 Gy/sec of gamma radiation on the radiation response of <i>Acetobacter liquefaciens</i>	65
Table (9) : Effect of dose rate 0.16 Gy/sec of gamma radiation on the radiation response of <i>Acetobacter liquefaciens</i>	66
Table (10) : Effect of dose rate 0.058 Gy/sec of gamma radiation on the radiation response of <i>Gluconobacter oxydans</i>	69

Table (11) : Effect of dose rate 0.16 Gy/sec of gamma radiation on the radiation response of <i>Gluconobacter oxydans</i>	70
Table (12) : Effect of dose rate on the D ₁₀ -value of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i>	74
Table (13) : Coding of irradiated isolates of <i>Acetobacter liquefaciens</i> selected at 0.058 Gy/sec and 0.16 Gy/sec.....	77
Table (14) : Coding of irradiated isolates of <i>Gluconobacter oxydans</i> selected at 0.058Gy/sec and 0.16Gy/sec	78
Table (15) : Comparison between the main biochemical reactions of the wild type and the selected irradiated isolates of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i> at dose rate 0.058 Gy/sec	80
Table (16) : Abilities of wild isolates as well as the selected irradiated ones at 0.058 Gy/sec, of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i> , to utilize different carbon sources	81
Table (17) : Abilities of the wild type as well as the selected irradiated ones at 0.058 Gy/sec, of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i> , to utilize different amino-acids.....	82
Table (18) : Comparison between the antagonistic properties of the wild type of <i>Acetobacter liquefaciens</i> and its irradiated isolates selected at dose rate 0.058 Gy/sec and 0.16 Gy/sec using agar discs method and <i>Staph. aureus</i> as a test organism	84

Table (19) : Comparison between the antagonistic properties of the wild type of <i>Gluconobacter oxydans</i> and its selected irradiated isolates at dose rate 0.058 Gy/sec and 0.16 Gy/sec using agar discs method and <i>Staph. aureus</i> as a test organism	89
Table (20) : Effect of different carbon sources on the antimicrobial activity of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i> as well as the mutant 7A.....	92
Table (21) : Effect of different nitrogen sources on the antimicrobial activity of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i> as well as the mutant 7A.....	92
Table (22) : Effect of incubation temperature on the antimicrobial activity of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i> as well as the mutant 7A.....	96
Table (23) : Effect of pH of the medium on the antimicrobial activity of <i>Acetobacter liquefaciens</i> and <i>Gluconobacter oxydans</i> as well as the mutant 7A.....	99
