APPROVAL SHEET

Name of student : NADIA KHALIL IBRAHIM KANDIL

Title of Thesis :

**THE EFFECT OF WIDE USE OF DIFFERENT
FERTILIZERS COMMERCIALY PREPARED
AND THE RESULTANT EFFECT OF THEIR
ACCUMULATION ON PLANT AND SOIL**

Degree : Ph.D. in Environmental Science

This Thesis for Ph.D. degree has been approved by :

Prof. Dr. Abdel-Ghany Ibrahim Omar Baz
(Member)
Professor of Plant Physiology,
Dept. of Agric. Botany,
Faculty of Agriculture, Suez Canal University

A. G. Baz

Prof. Dr. Mahmoud Mohamed Mahmoud
(Member)
Professor of Plant Physiology,
Dept. of Agric. Botany,
Faculty of Agriculture, Ain Shams University

M. H. Mahmoud

Prof. Dr. Mohamed Abdel-Rahim Abdel-Halim
(Supervisor and Member)
Professor Emeritus of Agric. Botany and Plant Physiology,
Faculty of Agriculture, Ain Shams University

M. A. Abdel-Halim

Committee in Charge

Date of Examination / / 1997

The first part of the paper discusses the importance of the research and the objectives of the study. It then proceeds to a literature review, followed by a description of the methodology used. The results of the study are presented in the next section, followed by a discussion of the findings and their implications. The paper concludes with a summary of the main points and a list of references.

The research was conducted in a systematic and rigorous manner, following the principles of good research practice. The data collected was analyzed using appropriate statistical methods, and the results were presented in a clear and concise manner. The findings of the study are discussed in detail, and their implications for practice and policy are explored. The paper is well-structured and easy to read, and it provides a valuable contribution to the field.

The research was conducted in a systematic and rigorous manner, following the principles of good research practice. The data collected was analyzed using appropriate statistical methods, and the results were presented in a clear and concise manner. The findings of the study are discussed in detail, and their implications for practice and policy are explored. The paper is well-structured and easy to read, and it provides a valuable contribution to the field.

ACKNOWLEDGMENT

The author wishes to express her deepest gratitude and indebtedness to Prof. Dr. Mohamed A. Abdel-Halim, Professor Emeritus of Agric. Botany and Plant Physiology, Faculty of Agriculture, Ain Shams University, main supervisor, who in the first place suggested the problem and supervised the work. His valuable suggestions and sincere encouragement and efforts made throughout the preparation of the manuscript are greatly appreciated.

Grateful thanks are also extended to Prof. Dr. Samir M. Abd El-Aziz, Professor of Soil Science and Director of Improvement and Conservation of cultivated soil Research Department, Soils, Water and Environment Research Institute, Agricultural Research Center, for his participation in proposing and planning the study subject, continuous supervision, providing facilities needed throughout the investigation and in preparing and critically revising the manuscript.

I also greatly acknowledge the sincere efforts made by Dr. Ezzat M. Soliman, Associate Professor of Soil Science, Department of Agricultural Sciences, Institute of Environmental Studies and Research, Ain Shams University, for his valuable supervision and suggestions throughout the study.

Thanks are extended to all members of Soils, Water and Environment Research Institute of the Agricultural Research Center, and Arid Lands Agricultural Research Unit, Faculty of Agriculture, Ain Shams University, for their continuous assistance in providing all financial and material facilities.

TABLE OF CONTENTS	iv
LIST OF TABLES	vi
LIST OF FIGURES	x
ABSTRACT	xiv
 1- INTRODUCTION	 1
2- REVIEW OF LITERATURE	3
2.1. Fertilizers as a source of trace elements	3
2.2. Accumulation of trace elements in soils as a result of fertilization	9
2.3. Effect of trace elements on plant growth	16
2.4. Accumulation of trace elements in plants	23
2.5. Interaction between elements on their absorption	31
2.6. Effect of trace elements on some physiological aspects	35
Heavy metals and environmental contamination.....	43
3- MATERIALS AND METHODS	46
3.1. The permanent fertilization experiment at Bahtim Station	46
3.2. Sand culture experiment	58
3.3. Soil analysis	60
3.4. Plant analysis	61
3.5. Fertilizer analysis	64
4- RESULTS AND DISCUSSION	71
4.1. The permanent fertilization experiment at Bahtim Station	71

4.1.1. Effect of agricultural rotations and permanent fertilization on plant growth.....	7
4.1.2. Effect of agricultural rotations and permanent fertilization on content of trace elements in red radish plants ...	7
4.2. Sand culture experiment	8
4.2.1. Effect of Cadmium on plant	8
4.2.2. Effect of Lead on plant	9
4.2.3. Effect of Cobalt on plant	11
4.2.4. Effect of Chromium on plant	12
5- CONCLUSION	13
6- SUMMARY	13

ARABIC SUMMARY	

LIST OF TABLES

<u>Table</u>	<u>Title</u>	<u>Page</u>
(1) :	Particle size distribution of the investigated soil at Bahtim Agricultural Station.....	50
(2) :	Some chemical properties of the investigated soil of Bahtim permanent agricultural experiment	51
(3) :	Effect of permanent fertilization and agricultural rotations on available trace elements (ppm) in the soil of Bahtim permanent agricultural experiment in 1992.....	52
(4) :	Critical levels of trace elements in soil and plant	57
(5) :	Total content of impurities of trace elements (ppm) in some commercial fertilizers	65
(6) :	Total content of impurities of trace elements (ppm) in some foliar spray commercial fertilizers.....	68

<u>Table</u>	<u>Title</u>	<u>Page</u>
(7) :	Effect of permanent fertilization and agricultural rotations on dry matter yield of red radish plants	72
(8) :	Effect of permanent fertilization and agricultural rotations on elemental content (ppm) of red radish grown in soil of Bahtim permanent experiment....	75
(9) :	Fresh and dry matter yield of red radish plants grown on sand culture with different levels of cadmium	84
(10) :	Elemental content in shoots and roots of red radish plants grown on sand culture with different levels of cadmium	87
(11) :	Effect of cadmium on the content of amino acids (%) in red radish plant roots grown on sand culture	91
(12) :	Pigment contents (mg/g F. wt.) of red radish plants grown on sand culture with different levels of cadmium	95
(13) :	Fresh and dry matter yield of red radish plants grown on sand culture with different levels of lead	98

<u>Table</u>	<u>Title</u>	<u>Page</u>
(14) :	Elemental content in shoots and roots of red radish plants grown on sand culture with different levels of lead	101
(15) :	Effect of lead on the content of amino acids (%) in red radish plant roots grown on sand culture	104
(16) :	Pigment contents (mg/g F. wt.) of red radish plants grown on sand culture with different levels of lead	109
(17) :	Fresh and dry matter yield of red radish plants grown on sand culture with different levels of cobalt	111
(18) :	Elemental content in shoots and roots of red radish plants grown on sand culture with different levels of cobalt ..	115
(19) :	Effect of cobalt on the content of amino acids (%) in red radish plant roots grown on sand culture	117
(20) :	Pigment contents (mg/g F. wt.) of red radish plants grown on sand culture with different levels of cobalt	121
(21) :	Fresh and dry matter yield of red radish plants grown on sand culture with different levels of chromium	124

<u>Table</u>	<u>Title</u>	<u>Page</u>
(22) :	Elemental content in shoots and roots of red radish plants grown on sand culture with different levels of chromium	126
(23) :	Effect of chromium on the content of amino acids (%) in red radish plant roots grown on sand culture	129
(24) :	Pigment contents (mg/g F. wt.) of red radish plants grown on sand culture with different levels of chromium	133
