Title of Thesis:

STUDY THE EFFECT OF THE DEFFERENT TYPES OF SOLID FUELS ON THE
SINTERING PROCESS PERFORMANCE

Key Words: iron ore, sintering process, coke breeze, charcoal, petroleum coke.

Summary:

Coke breeze is the main fuel used in the sintering process. Due to its limited production in Egypt as well as the change in the imported coke breeze price is going higher from one year to another, this thesis aims at finding other alternatives to replace coke breeze. To achieve this goal, the sintering process factors such as the amount of coke breeze, water content and ignition time were optimized before testing the fuel alternatives. The used fuel alternatives are anthracite, petroleum coke, coal and charcoal. Similar results of optimum conditions using coke breeze alone were achieved by its replacement by 45 % of anthracite or petroleum coke and 30% of coal or charcoal.

Acknowledgment

I would like to express my deep regards and sincere gratitude to Prof. Ahmed Abdel Aziz Ahmed, Faculty of Engineering, Cairo University for his care, kind supervision, encouragement, constant efforts, and valuable stimulating guidance and fruitful discussion throughout this study.

I offer my profuse thanks with humble reverence to Prof. Mohamed El-Menshawii Hessain Shalabi, Central Metallurgical Research and Development Institute (CMRDI), for his invaluable guidance and support. He was a beacon light, whose constant efforts and encouragement proved to be a parallel stimulus in completing this research successfully.

I would like to thank Dr. Ayman Abdel Hamed El-Midany, Faculty of Engineering, Cairo University for for his patience, motivation, and immense knowledge. His guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better advisor and mentor for my master study.

I am grateful to my supervisor Prof. Dr. Naglaa Ahmed El-Hussiny, Central Metallurgical Research and Development Institute (CMRDI), for her support and co-operation in the hours of need and for her expert.

Table of Contents

Acknowledgment.....	I
Table of contents	II
List of tables	VIII
List of figures.....	IX
Abstract	XIV
Chapter 1: Introduction	1
Chapter 2: Literature Review	3
2.1 Introduction.....	3
2.2 Sintering of iron ore	3
2.3 History of sintering process and its advantage	5
2.4 Factors affecting the quality and rate of sintering process.....	6
2.4.1 Effect of the Amount of Water Added to the sintering charge	6

2.4.2 Effect of Sinter Return added to the sintering charge.....	7
2.4.3 Effect of Feed Size	7
2.4.3.1 Effect of Coke Breeze Size	7
2.4.3.2 Effect of Iron Ore Grain Size.....	8
2.4.3.3 Effect of Limestone Particle Size.....	9
2.4.4 Effect of the amount of coke on the sintering process.....	9
2.4.5 Effect of Ignition Time	10
2.5 Use of other types of fuels.....	11
2.5.1 Anthracite	11
2.5.2 Petroleum coke	12
2.5.3 Charcoal	13
Chapter 3: Experimental Work	15
3.1 Raw Materials	15
3.1.1 Iron ore.....	15
3.1.2 Limestone.....	15
3.1.3 Coke breeze.....	15
3.1.4 Sinter return.....	15
3.1.5 Fuels.....	16
3.2 Assessment of Raw Materials and Sinter Products.....	16
3.2.1 Chemical compositions	16
3.2.2 Mineralogical examination by XRD	16

3.3 Sintering Apparatus and Sintering procedure	16
3.3.1 Strength of sinter by shatter test	17
3.3.2 Productivity of the sintering machine	17
3.3.3 Productivity of the sintering machine at blast furnace Yard.....	18
3.3.4 Reducibility of product sinter by hydrogen.....	19
3.3.5 Reflected Light Microscopy	20
Chapter 4: Results and Discussion	21
4.1 Characterization of Individual Raw Materials of Sintering Iron Ore	21
4.1.1 Chemical compositions of the sintering raw material	21
4.1.1.1 The chemical compositions of iron ore and limestone.....	21
4.1.1.2 The chemical composition of used fuels	22
4.1.2 The mineralogical examination of raw material	22
4.1.2.1 The mineralogical examination of Iron ore.....	22
4.1.2.2 The mineralogical examination of used fuels	23
4.1.3 Sieve analysis of raw materials.....	26
4.2 Factors Affecting on the Technical Properties of the Produced Sinter.....	26
4.3.1 Effect of the amount of coke breeze	26
4.3.2 Effect of the amount of added water	30
4.3.3 Effect of ignition time	33

4.3.4 Characterization of the produced sinter at 6 % coke breeze used	35
4.3 Alternative Fuels for Iron Ore Sintering.....	38
4.3.1 Effect of Replacement of Coke Breeze by Anthracite on the Sintering Process	39
4.3.1.1 Effect of replacement of coke breeze by anthracite on vertical velocity	39
4.3.1.2 Effect of replacement of coke breeze by anthracite on the amount of ready made sinter and its strength	40
4.3.1.3 Effect of replacement of coke breeze by anthracite on the productivity of sintering machine and the productivity at blast furnace yard.....	41
4.3.1.4 The Characterization of produced sinter at 45 % of coke breeze replaced by anthracite	42
4.3.1.4.1 X-ray analysis of the produced sinter.....	42
4.3.1.4.2 The microscopic structure of the produced sinter.....	42
4.3.1.4.3 Chemical analysis of the produced sinter.....	44
4.3.1.4.4 Reducibility the produced sinter	44
4.3.2 Effect of Replacement of Coke Breeze by Petroleum Coke on the Sintering Process.....	45
4.3.2.1 Effect of replacement of coke breeze by petroleum coke on vertical velocity	45
4.3.2.2 Effect of replacement of coke breeze by petroleum coke on ready made sinter and its strength	46
4.3.2.3 Effect of replacement of coke breeze by petroleum coke on the productivity of sintering machine and the productivity at blast furnace yard.....	46
4.3.2.4 Characterization of produced sinter at 45% petroleum coke.....	48

4.3.2.4.1 X-ray analysis of the produced sinter.....	48
4.3.2.4.2 The microscopic structure of the produced sinter.....	48
4.3.2.4.3 Chemical analysis of the produced sinter.....	49
4.3.2.4.4 Reducibility of the produced sinter.....	49
 4.3.3 Effect of Replacement of Coke Breeze by Coal on the Sintering Process	 51
4.3.3.1 Effect of replacement of coke breeze by coal on vertical velocity on the sintering machine.....	51
4.3.3.2 Effect of replacement of coke breeze by coal on the amount of readymade sinter and its strength	51
4.3.3.3 Effect of replacement of coke breeze by coal on the productivity of sintering machine and the productivity at blast furnace yard.....	52
4.3.3.4 Characterization of produced sinter at 30%coal	54
4.4.3.4.1 X-ray analysis of the produced sinter.....	54
4.4.3.4.2 The microscopic structure of the produced sinter.....	54
4.4.3.4.3 Chemical analysis of the produced sinter.....	54
4.4.3.4.4 Reducibility of the produced sinter.....	54
 4.3.4 Effect of Replacement of Coke Breeze by Charcoal on the Sintering Process	 57
4.3.4.1 Effect of replacement of coke breeze by charcoal on vertical velocity on the sintering machine	57
4.3.4.2 Effect of replacement of coke breeze by charcoal on the amount of readymade sinter and its strength	57
4.3.4.3 Effect of replacement of coke breeze by charcoal on the productivity of sintering machine and the productivity at blast furnace yard.....	58
4.3.4.4 Characterization of optimum produced sinter at 30 coke breeze replaced by charcoal	60

4.34.4.1 X-ray analysis of produced sinter	60
4.3.4.4.2 The microscopic structure of produced sinter	60
4.3.4.4.3 Chemical analysis of produced sinter	60
4.3.4.4.4 Reducibility of the produced sinter.....	60
