DISCUSSION AND JUDJMENT COMMITTEE

The vice-president for higher studies and research of Ain-Shams University has approved to form the following committee for the discussion of Mrs. Ghada Farag e.p. Dorry

1. Prof. Dr. Hussein KameP. Bahaa e.p. Din
..... Chairman. 
2. Prof. Dr. Zeinab Bishry
..... Member. 
3. Prof. Dr. Hamed Shatfa
..... Member. 
4.
..... Member.

LIST OF TABLES

Table I : Classification of Diabetes Recommended by National Diabetes Data Group.

Table II : The Action of Insulin in Liver.

Table III : Fluid and Electrolyte Estimated Losses in DKA.

Table IV : Foods Containing CHO

Table V : CHO Prescription According to the Mode of Action Duration of Insulin Selected.

**Table VI : List of Non-CHO Foods
(those containing little or no CHO).**

Table VII : Common Types of Available Insulin.

Table VIII: Fluid and Electrolyte Therapy for DKA.

Table IX : Management of Kidney Disorders in Diabetes.

Table X : Stages in Diabetic Renal Disease.

Table XI : Principles of Management of Progressive Diabetic Nephropathy.

Table XII : Intervention in Diabetic Nephropathy to Renal Reserve.

Table XIII: Indications for Initiation of End Stage Renal Disease Therapy (Dialysis or Kidney Transplant).

Table 1 : Raw data for healthy (control) group.

Table 2 : Descriptive statistics for control group

Table 3 : Raw data for diabetic patients group

Table 4 : Descriptive statistics for patients group

Table 5 : Comparative statistical analysis between control and all patient groups for all studied parameters.

Table 6 : Comparative statistical analysis between + ve and -ve microalbuminuric patient group for all studied parameters.

Table 7 : Correlation study for all patient groups regarding all studied parameters.

Table 8 : Raw data of the patients' answers to questionnaire number 1 about important information of the diabetic patients.

Table 9 : Correlation between age of onset and family history.

Table 10: Raw data of the answers of the diabetic patients to questionnaire number 2 about socioeconomic and psychological status of diabetic patients.

Table 11: Correlation between regularity of taking insulin injection with education of father and mother, family income and degree of good relation between father and mother of the

diabetic child.

Table 12: Correlation between inter personal relationship among family members and reaction of mother towards her child.

Table 13: Raw data of the answers of diabetic patients to questionnaire number 3 about emotional attitude of diabetic child.

Table 14: Correlation between patient's attitude and behavior.

Table 15: Raw data of the answers of diabetic patient to questionnaire number 4 about food habits of the diabetic patient.

Table 16: Correlation between effect of diabetic control on diabetes with (does the patient take sweeteners frequently).

Table 17: Correlation between special dietetic care for the child and diet of economic factors.

Table 18: Correlation between social orientation and diabetic complications.

Table 19: Correlation between duration of illness and growth assessment.

Table 20: Correlation between glucose with education of father and mother, family income, food habits, neuritic traits, schoolastic achievement, concentration at classroom and

social orientation.

Table 21: Correlation between glucose with number of meals taken by the patient, size of 3 meals and state of diabetic control.

Table 22: Correlation between T_3 with duration of illness, diabetic complications, degree of regularity of taking insulin injection, special dietetic care for the child, schoolastic achievement and social orientation.

Table 23: Correlation between T_4 with duration of illness, diabetic complications, degree of regularity of taking insulin injection, special dietetic care for the child, schoolastic achievement and social orientation.

Table 24: Correlation between TSH with duration of illness, diabetic complications, degree of regularity of taking insulin injection, special dietetic care for the child, schoolastic achievement and social orientation.

LIST OF FIGURES

- Figure 1 : Comparative study between control and patient groups regarding blood glucose level.
- Figure 2 : Comparative study between control and patient groups regarding body weight.
- Figure 3 : Comparative study between control and patient groups regarding body height.
- Figure 4 : Comparative study between control and patient groups regarding serum T₃.
- Figure 5 : Comparative study between control and patient groups regarding serum T₄.
- Figure 6 : Comparative study between control and patient groups regarding serum TSH.
- Figure 7 : Comparative study between regulation of taking insulin and degree of good relation between father & mother.
- Figure 8 : Comparative study between social behavior and patient's attitude.
- Figure 9 : Comparative study between special dietetic care and diet of economic factors.

ACKNOWLEDGEMENT

ACKNOWLEDGEMENT

It has been a great honor for me to proceed with this work under the supervision of Professor Doctor Kadry Heffni, Professor of Psychology, Institute of Post graduate Childhood Studies Ain Shams University. His generous support offered me a spirit of enthusiasm throughout the whole work.

It has also been a great honor and extreme pleasure for me to have Professor Doctor Zeinab Bishiri Professor of Psychiatry Ain Shams University supervising my work. She is one of the eminent professors of psychiatry, her kind supervision, valuable guidance and generous advice have been a great help to me.

I have no adequate words to express my indebtedness for the active participation of Professor Doctor Mohamed Abd El-Hamid Mansour, Professor and Head of Radiation Research Department for Health; National Center of Radiation Technology Research.

A very special word of appreciation to Doctor Gamal Samy Aly Lecturer of Medical Childhood Studies; Institute of Postgraduate Childhood Studies. I'm really indebted for his close supervision,
