

THE ROLE OF NUCLEAR MEDICINE IN DIAGNOSIS AND THERAPY OF PRIMARY BRAIN TUMORS

Essay Submitted for the Partial Fulfillment of the Master
Degree in Radiation Oncology and Nuclear Medicine

By

Hesham Ahmed El-Ghazaly

M.B., B.Ch.

Supervised by

Prof. Dr. Laila Faris Matta

Professor and Head of Department of Radiation Oncology and
Nuclear Medicine

Faculty of Medicine-Ain Shams University

Prof. Dr. Hosam Mohamed El-Hosainy

Professor of Neurosurgery

Faculty of Medicine-Ain Shams University

Dr. Sohair Sayed Ismaeel

Assistant Professor of Radiation Oncology and Nuclear
Medicine

Faculty of Medicine-Ain Shams University

Faculty of Medicine
Ain Shams University
1998

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

**قَالُوا سُبْحَانَكَ لَا عِلْمَ لَنَا إِلَّا مَا عَلَّمْتَنَا،
إِنَّكَ أَنْتَ الْعَلِيمُ الْحَكِيمُ**

صَدَقَ اللَّهُ الْعَظِيمُ

سورة البقرة - الآية: ٣٢

Acknowledgment

First and foremost, thanks to Allah to whom I relate any success in achieving any work in my life.

I am greatly honored to express my sincere and profound gratitude to Prof. Dr. Laila Faris, Professor and Head of Radiation Oncology and Nuclear Medicine Department, Ain Shams University, for giving me the chance to work under her supervision and for her kind guidance, generous help and valuable directions that made this work possible. Words of thanks are little to express my gratefulness for her.

I am deeply grateful to Prof. Dr. Hosam El-Hoseiny, Professor of Neurosurgery, Ain Shams University, for his sincere help, continuous support and his kind cooperation during this work,

I wish to express my deep gratitude to Prof. Dr. Sohair Ismael, Assistant Professor of Radiation Oncology and Nuclear Medicine, Ain Shams University, for her generous help, valuable advise and continuous supervision.

Also, I would like to thank Dr. Magdy Shaaban for his continuous help and grateful advise.

Lastly, I would like to thank all senior staff and my colleagues of Radiation Oncology and Nuclear Medicine Department, Ain Shams University for their sincere help and cooperation during the accomplishment of this work,

Hesham El-Ghazaly

*To my beloved parents. who are
always the main source of my successes*

List of Contents

	Page
Introduction and aim of the work	1
• Functional anatomy	3
• Blood brain barrier	11
• Histology	17
• Clinical picture	20
• Epidemiology	28
• Pathology	34
• Radiological diagnosis	56
• Radionucleide imaging	60
• Illustrative cases	138
• Radionucleide therapy	151
Summary	168
References	170
Arabic summary	

List of Tables

	Page
• Table (1): Clinical syndromes produced by endocrine activity pituitary adenomas	24
• Table (2): Clinical findings in temporal lobe herniation	25
• Table (3): Clinical findings of cerebellar-foramen magnum herniation	27
• Table (4): Classification of primary intracranial tumors by cell of origin	29
• Table (5): Frequency of primary intracranial brain tumors	30
• Table (6): Frequency of intracranial tumors as a function of age range	31
• Table (7): Relative frequency in Ain Shams University Specialized Hospital and Radiation Oncology and Nuclear Medicine Department, Ain Shams University	32
• Table (8): Sex distribution from January (1995) to December (1997)	33
• Table (9): Age distribution from January (1995) to December (1997)	33
• Table (10): Pathologic characteristic of intracranial tumors	54
• Table (11): Thallium-201 radiation absorbed dose	70
• Table (12): Factors affecting TL-201 uptake by tumor cells	71
• Table (13): Comparison between Thallium and Sestamibi	100
• Table (14): Radioisotopes used in positron emission tomography	131
• Table (15): Types of radionuclide therapy	151

List of Figures

	Page
• Fig. (1): Lateral view showing the medial aspect of the brain	5
• Fig. (2): Basal view of the brain	8
• Fig. (3): Blood brain barrier by electron microscope	12
• Fig. (4): Frequency of primary intracranial brain tumors	30
• Fig. (5 a,b): Anaplastic astrocytoma	41
• Fig (6): Anaplastic astrocytoma	42
• Fig. (7): Glioblastoma multiforms gross picture	42
• Fig. (8 a,b,c,d): Histopathology of glioblastoma multiforms	43, 44
• Fig. (9 a,b): Meningioma gross picture	51
• Fig. (10 a,b): Malignant meningioma	53
• Fig. (11): Schematic diagram of normal cerebral venous anatomy	64
• Fig. (12): Normal conventional brain scan	65
• Fig. (13): Primary brain tumor by ^{99m} Tc glucoheptonate	66
• Fig. (14): Relationship between ²⁰¹ -thallium index and astrocytoma, anaplastic astrocytoma and glioblastoma	82
• Fig. (15): Correlation between ²⁰¹ -TL (early-delayed) and PCNA indices	83
• Fig. (16): Relation of thallium index to prediction of survival	93
• Fig. (17): High grade glioma with increased thallium and ^{99m} Tc HMPAO uptake	109
• Fig. (18): High grade glioma with increased thallium but less ^{99m} Tc HMPAO uptake	110
• Fig. (19): Low grade glioma with increased HMPAO uptake while no thallium uptake	111
• Fig. (20): Low grade glioma with no focal uptake of thallium and decreased HMPAO uptake	112
• Fig. (21): Somatostatin receptor binding	116
• Fig. (22): Clinical application of octreoscan	118
• Fig. (23): Meningioma imaging by octreoscan	121
• Fig. (24): Pituitary adenoma imaging by octreoscan	126
• Fig. (25 a, b): Case I	141
• Fig. (26 a, b): Case II	142
