إنك أنت العليم الحكيم**

صدق الله العظيم

سورة البقرة، الآية ٣٢

## **Acknowledgment**

*First, thanks are all to Allah for blessing this study until it has reached its end as a little part of his generous help throughout my life.*

*I wish to express my deep appreciation and gratitude to Prof. Dr. Sanaa Abd El-Rahman Mahmoud, Assistant Professor of Pediatrics, Ain Shams University, for giving me the privilege of working under her supervision and helpful guidance. Her advice was always stimulating and especially essential to complete this work.*

*I am sincerely grateful to Dr. Hanan Mostafa El-Shakankiry, Lecturer of Pediatrics, Ain Shams University, for her great cooperation, generous help and great assistance throughout this work.*

List of tables	
List of figures	
List of abbreviations	
Introduction and aim of the work	1
Oxygen radical production	4
• Mechanism of tissue destruction by free radicals	15
• Defence against oxygen radicals	18
Pediatric oxygen radical diseases	33
I. Oxygen radical diseases of prematurity	34
• Retinopathy of prematurity	34
• Bronchopulmonary dysplasia	44
• Necrotizing enterocolitis	56
• Persistence of ductus arteriosus	65
• Periventricular-intraventricular haemorrhage	72
II. Cystic fibrosis	77
III. G.I.T diseases	90
• Inflammatory bowel diseases	90
• Liver diseases	122
Cholestatic liver disorders	122
Ischemic-reperfusion and organ preservation injury	133
Alcohol-induced liver injury	134
Copper and iron storage diseases	135
Inflammatory and immune liver diseases	136
• Pancreatitis	136
IV. Cancer	144
Summary	146
References	150
Arabic summary	

## List of Tables

	Page
• Table (1): Synthetic antioxidants and scavengers	31
• Table (2): The etiological factors in retinopathy of prematurity	41
• Table (3): Factors that appear to be involved in decreasing individual tolerance and therefore increasing the incidence and severity of oxygen toxicity	46
• Table (4): Recommended medications and dosage for treatment of bronchopulmonary dysplasia	55
• Table (5): Modified Bell staging criteria for NEC	63
• Table (6): Cardiovascular distress score in premature infants with patent ductus arteriosus	70
• Table (7): The reported incidence of CF associated liver disease	85
• Table (8): Daily vitamin supplementation in cystic fibrosis patients	88
• Table (9): The important microscopic differences between ulcerative colitis and Crohn's disease	101
• Table (10): Extraintestinal manifestations of Crohn's disease	109
• Table (11): Contributing factors to growth abnormalities in children	111
• Table (12): Establishing the diagnosis of ulcerative colitis in children and adolescents	114
• Table (13): Establishing diagnosis of Crohn's disease	116

- Table (14): Differential diagnosis of presenting symptoms of Crohn's disease 117
- Table (15): Medication doses for children with ulcerative colitis 118
- Table (16): Pharmacologic treatment of Crohn's disease 120
- Table (17): Indications for surgery in Crohn's disease 121
- Table (18): The major causes of cholestasis in infancy 123
- Table (19): Etiologic factors in acute pancreatitis 137
- Table (20): Investigations of chronic pancreatitis 142

## List of Figures

	<b>Page</b>
• Fig. (1): Mechanism of tissue injury	12
• Fig. (2): The pathology of lipid peroxidation induced by oxygen and other free radicals	15
• Fig. (3): Intracellular localisation of antioxidants	19
• Fig. (4): Antioxidant enzymatic pathways	23
• Fig. (5): The reactive oxygen species, the host defence and the damaging effects of the reactive oxygen species	27
• Fig. (6): Summary of mechanisms potentially involved in the pathogenesis of NEC in the premature infant	59
• Fig. (7): The major factors believed to determine the patency of the ductus arteriosus	66
• Fig. (8): Pathogenesis of periventricular-intraventricular hemorrhage	73
• Fig. (9): Proposed schema on the pathogenesis of Crohn's disease	94
• Fig. (10): A simplified overview of the consequences of cholestasis	126
