

RAPID FLOW CYTOMETRIC BACTERIAL DETECTION AND ANTIBIOTIC SUSCEPTIBILITY IN BODY FLUIDS

Thesis
Submitted for partial fulfillment of
M.D. Degree in
Clinical and Chemical Pathology
By

Ghada Abdel Wahed Ismail

M.B., B.ch., M. Sc.
Under Supervision of

Prof. Dr. Ragaa Mahmoud Lasheen

Prof. of Clinical and Chemical Pathology
Faculty of Medicine, Ain-Shams University

Dr. Hadia Hussein Bassim

Ass.Prof. of Clinical and Chemical Pathology
Faculty of Medicine, Ain-Shams University

Dr. Amira Mohamed Mokhtar

Ass.Prof. of Clinical and Chemical Pathology
Faculty of Medicine, Ain-Shams University

Dr. Azza M. Sadek El-Dnasoury

Ass.Prof. of Clinical and Chemical Pathology
Faculty of Medicine, Ain-Shams University

Dr. Fatma El-Said Metwally

Lecturer of Clinical and Chemical Pathology
Faculty of Medicine, Ain-Shams University

Faculty of Medicine
Ain-Shams University

1997

Ghada Abdel Wahed Ismail

Prof. Dr. Ragaa Mahmoud Lasheen

«قالوا سبحانك لا علم لنا
إلا ما علمتنا انك انت
العليم الحكيم»
صدق الله العظيم

«سورة البقرة - آية ٢٢»

Acknowledgment

I would like to express my sincere gratitude and appreciation to ***Prof. Dr. Ragaa Mahmoud Lasheen***, Professor of Clinical Pathology, Faculty of Medicine Ain-Shams University, for giving me the honor to work under her supervision, and for providing me from her vast experience as well as for her utmost care.

I am also grateful to ***Dr. Hadia Hussein Bassem***, Assistant Professor of Clinical Pathology, Faculty of Medicine Ain-Shams University, for her meticulous supervision, valuable suggestions and constructive criticism throughout this work.

I would like to offer special thanks and appreciation to ***Dr. Amira Mohamed Mokhtar***, Assistant Professor of Clinical Pathology, Faculty of Medicine Ain-Shams University, for her constant guidance, close attention, encouragement, and great help she gave to accomplish this work in the proper way.

I do appreciate the kind and active participation of ***Dr. Azza M. Sadek El Dnasoury***, Assistant Professor of Clinical Pathology, Faculty of Medicine Ain-Shams University, in the practical part of this work. Her constructive supervision and continuous help allowed this work to emerge in the proper way.

I am also grateful to ***Dr. Fatma El-Said Metwaly***, Lecturer of Clinical Pathology, Faculty of Medicine Ain-Shams University, for her help and support during this study.

I would like to convey my warmest gratitude to ***Prof. Dr. Sawsan Abdel Moety Fayad***, Professor and Head of Department of Clinical Pathology, Faculty of Medicine Ain-Shams University and to all members of the Clinical Pathology Department.

List of Contents

	<i>PAGE</i>
<i>List of tables</i>	i
<i>List of figures</i>	ii
<i>Introduction and Aim of the work</i>	1
<i>Review of literature</i>	5
I-Flow Cytometry	5
• Design and operation of flow cytometer.	7
• Parameters measurable by flow cytometry.	7
• Quality control for clinical flow cytometer.	13
II-DNA of Bacteria	21
• Mechanism of staining by fluorescent dyes.	23
• Staining and viability	24
• Getting dyes into intact cells	25
• DNA stains	26
• Quantifying heterogeneity of bacterial cultures by FCM.	36
III-Flow Cytometric Measurement of Bacteria	43
• Specimens for FCM analysis	44
• FCM analysis.	48
I-Bacterial detection.	51
II-Bacterial characterization by flow cytometry	56
* Flow cytometric Gram/viability stain.	58
* Real time cell classification.	60
* Limitations of FCM for the detection of bacteria in mixed populations	61
III-Flow cytometric antibiogram	62
IV-Flow cytometric assessment of bacterial viability	67
IV-Applications of FCM in Microbiology	69
• Application of FCM in clinical bacteriology.	70
• Application of FCM in Mycology.	76

List of contents (Cont.)	
• Uses of FCM in Virology	78
• Applications of FCM in Parasitology	85
<i>Materials and Methods</i>	89
<i>Results</i>	104
Case report 1	120
Case report 2	121
<i>Discussion</i>	122
<i>Conclusion</i>	131
<i>Recommendations</i>	132
<i>Summary</i>	133
<i>References</i>	136
<i>Appendix</i>	158
<i>Arabic summary</i>	181

List of Tables

	<i>PAGE</i>
Table 1: Different cellular parameters measurable by FCM.	11
Table 2: Some determinants amenable to analysis by FCM.	12
Table 3: GC% in six different bacterial species.	56
Table 4: The most common isolates and effective antibiotics in different clinical specimens.	90
Table 5: Concentrations of stock solutions of different antibiotics.	93
Table 6: The volume of working solutions of antibiotics containing 5xMIC to be completed to 300 μ L of the sample	94
Table 7: Bacterial detection by FCM and culture.	107
Table 8: Distribution of specimens in the four groups.	107
Table 9: Data of specimens yielding positive FCM results with negative culture (Group III).	108
Table 10: Data of specimens yielding negative FCM and positive culture results (Group IV).	109
Table 11: Antibiotic intake in groups showing discrepancy between FCM and culture results.	109
Table 12: Distribution of positive cases by FCM and culture in different clinical specimens.	110
Table 13: Results of antibiotic susceptibility by FCM and disc diffusion method.	111
Table 14: Data of specimens showing disagreement between disc diffusion and FCM.	111

List of Figures

PAGE

Figure 1: Schematic diagram of a flow cytometer showing the flow cell, excitation light beam, light collection optics, filters and photodetectors.	10
Figure 2: Method one for performance monitoring using constant instrument settings.	16
Figure 3: Method two for instrument performance monitoring using constant intensity settings.	17
Figure 4: Two populations of <i>Micrococcus luteus</i> with low and high autofluorescence.	39
Figure 5: FCM histograms of samples showing growth.	54
Figure 6: FCM histograms of samples showing no growth.	54
Figure 7: Hoechst / Chromomycin fluorescence signatures of bacterial species with different DNA base composition.	57
Figure 8: FCM Gram Viability stain.	59
Figure 9: Flow cytometric histograms of a positive sample.	100
Figure 10: Specimen preparation and measurement procedures.	103
Figure 11: Distribution of specimens according to the results of FCM and culture.	112
Figure 12: Example of FCM histograms obtained from positive sample.	113
Figure 13: Example of FCM histograms obtained from negative sample.	114
Figure 14: Antibiotic intake in groups showing discrepancy between FCM and culture results.	115
Figure 15: Total positive results by FCM and culture in different clinical specimens.	116

List of figures (Cont.)

Figure 17: Example of FCM antibiotic susceptibility histograms.	118
Figure 18: Example of FCM antibiotic susceptibility histograms.	119
Figure 19: FCM histograms of Case Report 1.	120
Figure 20: FCM histograms of Case Report 2.	121

The first part of the paper discusses the importance of the research and the objectives of the study. It then proceeds to a literature review, followed by a description of the methodology used. The results of the study are presented in the next section, followed by a discussion of the findings and their implications. The paper concludes with a summary of the main points and a list of references.

The research was conducted in a systematic and rigorous manner, following the principles of good research practice. The data collected was analyzed using appropriate statistical methods, and the results were presented in a clear and concise manner. The findings of the study are discussed in detail, and their implications for practice and policy are explored. The paper is well-structured and easy to read, and it provides a valuable contribution to the field of research.
