

# ***Microbiological and Biochemical Studies on the Production of Rifamycin***

Thesis  
Submitted for Partial Fulfilment  
of Master Degree in Microbiology

By

***Hesham Ali Metwally El-Enshasy***

B. Sc. Microbiology - Chemistry.  
Faculty of Science, Ain Shams University, 1989

Supervised by

Professor

**MOHAMED R. ABU-SHADY**

Prof. of Microbiolog

Vice Dean

Faculty of Science

Ain Shams University

Professor

**AHMED I. EL-DIWANY**

Nat.&Microb. Products Dept.

National Research Centre.

Dokki, Cairo

Ass. Professor

**MOHAMED A. FARID**

Nat.& Microb.Products Dept.

National Research Centre.

Dokki, Cairo

Ain Shams University

Faculty of Science

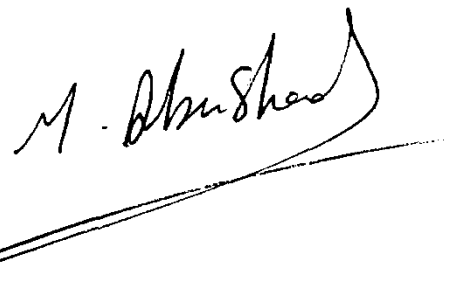

Dept. of Microbiology

1994

***Microbiological and Biochemical Studies  
on the Production of Rifamycin***

**BOARD OF SCIENTIFIC SUPERVISION**

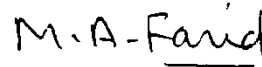

Professor Dr. MOHAMED R. ABU-SHADY  
Professor of Microbiology  
Vice Dean  
Faculty of Science  
Ain Shams University  
Cairo - Egypt.

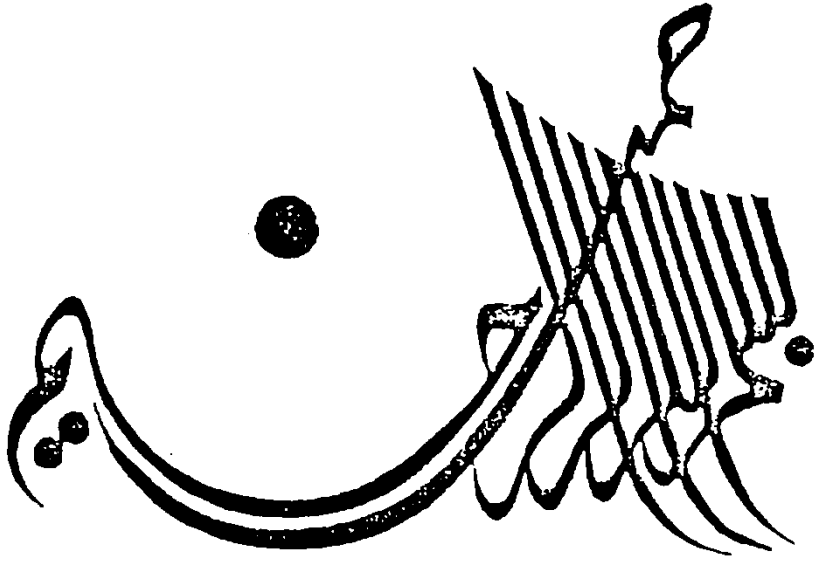

Professor Dr. AHMED I. EL-DIWANY  
Natural & Microbial Products Dept.  
National Research Centre.  
Dokki, Cairo, Egypt.

Ass. Professor Dr. MOHAMED A. FARID  
Natural & Microbial Products Dept.  
National Research Centre.  
Dokki, Cairo, Egypt.

سُبْحَانَكَ اللَّهُمَّ رَبَّنَا اللَّهُمَّ  
وَأَتَىكَ الشَّيْخُ الْعَلِيمُ الْوَلِيمُ  
مَنْ نَأْتِيكَ الْوَلِيمُ  
(٢٢١ / ١٠٠٠)

**This thesis had not been previously submitted for any degree at  
this or any other university**

**Signed**

---

**Hesham Ali Metwally El-Enshasy**

## ***Acknowledgement***

*I would like to express my sincere gratitude and heartfelt thanks to Prof. Dr. Mohamed R. Abu-Shady, Microbiology Dept., Faculty of Science, Ain-Shams University, for his supervising the work and providing scientific assistance for presenting the thesis.*

*Also, it gives me great pleasure to extend my thanks to Prof. Dr. Ahmed I. El-Diwany and Dr. Mohamed A. Farid, Chemistry of Natural and Microbial products Dept., National Research Centre ( NRC ), Cairo, who suggested the topic of this thesis and who meticulously supervised the execution of the experimental work and were always there with their guidance and constructive criticism. My heartfelt gratitude is expressed to them.*

*Sincere thanks are also due to Prof. Dr. Forsche, Secondary metabolite Dept, Gesellschaft fur Biotechnologische Forschung, Braunschweig, Germany. for his kind help in the section dealing with the selection and photographing of different colonies*

*I am indeed indebted to all members of Natural and Microbial Products Dept, National Research Centre, the auther feel much thanks and grateful for their help.*

### C O N T E N T S

<b>Acknowledgment .....</b>	<b>I</b>
<b>List of tables .....</b>	<b>VII</b>
<b>List of figures .....</b>	<b>XI</b>
<b>Preface .....</b>	<b>1</b>
<b>Review of Literature .....</b>	<b>3</b>
Classification of antibiotics .....	4
The discovery of rifamycins .....	6
The producer microorganism .....	7
The chemical composition of rifamycins .....	8
The different types of rifamycins .....	8
The biological activity of rifamycins .....	9
Mode of action .....	12
Clinical uses of rifampin .....	13
Production of rifamycins .....	15
Immobilized cell technology .....	18
Classification of immobilized cells .....	18
Techniques of whole cell immobilization .....	20
Cross-Linking method of immobilization .....	20
Carrier binding method .....	22
Adsorption method .....	22
Chelation of metal-binding of immobilization .....	23
Covalent-binding method of immobilization .....	23
Entrapment method of immobilization .....	25
Fiber entrapment method of immobilization .....	26

### III

Gel entrapment .....	26
Entrapment by polymerization .....	27
Entrapment of ionic network formation .....	28
Entrapment by precipitation .....	30
Microencapsulation method of immobilization .....	31
Immobilized free cell methods .....	32
Pelletization and flocculation .....	32
Antibiotic production by immobilized cell .....	33
<b>Materials and Methods</b> .....	37
Chemical used .....	37
Strain used .....	38
Media for cultivation and characterization of selected colony .....	39
Gelatin liquefaction test .....	41
Media for vegetative cell growth and fermentation .....	42
Shake flask cultivation .....	43
Determination of pII .....	43
Measurement of biomass .....	43
Determination of rifamycins .....	44
Methods for immobilization .....	47
Immobilization of cells by agar gel method .....	47
Immobilization of cells by polyacrylamide gel method .....	47
Immobilization of cells by alginate method .....	48
Determination of alginate bead diameter .....	49
Determination of bead dry weight .....	49

## IV

Immobilization of cells by adsorption onto glass wool surface .....	50
Determination of escaped cells .....	50
Determination of entrapped cells on glass wool surface .....	50
Lipid supplementation .....	50
<b>Results :</b>	52
1- Survey of <i>Amycolatopsis mediterranei</i> CBS 42575 colonies for the production of rifamycins B and SV .....	52
2- Immobilization by alginate method	
2.1 Effect of different parameters on rifamycins production and capsule stability .....	65
2.1.1 Effect of different concentrations of sodium alginate on rifamycins production and capsule stability .....	65
2.1.2 Effect of different grades of sodium alginate on rifamycins production and capsule stability .....	69
2.1.3 Effect of different diameter of capsules on rifamycins production and capsule stability .....	72
2.1.4 Effect of different cell loading of <i>A. mediterranei</i> inside the capsule on rifamycins production and capsule stability .....	75
2.1.5 Effect of different gelling agents on the rifamycins production and escapment of <i>A. mediterranei</i> .....	78

2.2	Comparative study between growth and rifamycins production in case of free and immobilized cells in calcium alginate gel .....	81
2.2.1	Effect of different incubation time .....	81
2.2.2	Effect of different inoculum size .....	87
2.2.3	Effect of different initial pH values .....	93
2.2.4	Effect of different concentrations of yeast extract .....	98
2.2.5	Effect of different concentrations of Magnesium sulfate .....	104
2.2.6	Effect of different concentrations of glucose .....	110
2.2.7	Effect of different concentrations of calcium chloride .....	115
3	Immobilization of <i>Amycolatopsis mediterranei</i> CBS 42575 using polyacrylamide gel .....	120
3.1	Effect of gel forming reagents on rifamycins production and cell growth .....	120
3.2	Rifamycins production by immobilized cells .....	124
4	Immobilization by agar method .....	125
5	Immobilization of cells by adhesion using glass wool .....	126
5.1	Effect of different types of glass wool on rifamycins production and cell growth .....	126
5.2	Effect of different weight of glass wool ( Corning grade ) on rifamycins production and cell escapement .....	131
5.3	Effect of different inoculum size on rifamycins production by immobilize cells on glass wool .....	135

## VI

5.4	Effect of different concentrations of glucose of rifamycins production by immobilized cells on glass wool .....	138
6	Repeated batch fermentation for rifamycins production .....	141
6.1	Continuous production of rifamycins by immobilized cells in calcium alginate beads for 6 repeated batches .....	141
6.2	Continuous production of rifamycins by immobilized cells on glass wool for 6 repeated batches .....	145
7	Effect of pure lipids and natural oils on the production of rifamycins by <i>Amycolatopsis mediterranei</i> .....	155
<b>Discussion .....</b>		160
<b>Summary .....</b>		170
<b>References .....</b>		174
<b>Arabic summary .....</b>

### List of Figures

	Page
Fig. (1) : The chemical structure of the most important types of Rifamycins.....	10
Fig. (2) : Rifamycins from <i>Amicolatopsis mediterranei</i> with rifamycin S as a key intermediate.....	11
Fig. (3) : Classification of Immobilization methods for whole cells...	21
Fig. (4a) : Standard curve for Rifamycin B.....	45
Fig. (4b) : Standard curve for Rifamycin SV.....	46
Fig. (5a-f) : Different morphological structure of <i>Amicolatopsis mediterranei</i> colonies on Benner's agar medium .....	54
Fig. (6) : Effect of different concentrations of sod. alginate on rifamycin production by immobilized cells.....	68
Fig. (7) : Effect of different grades of sod. alginate on rifamycins production by immobilized cells.....	71

## VIII

	Page
Fig. (8) : Effect of different capsule diameter on rifamycins production by immobilized cells.....	74
Fig. (9) : Effect of different cell loading inside the capsule on rifamycins production by immobilized cells.....	77
Fig. (10) : Effect of different gelling agents on rifamycins production by immobilized cells.....	80
Fig. (11a) : Effect of different incubation period on rifamycins production by free cells.....	85
Fig. (11b) : Effect of different incubation period on rifamycins production by immobilized cells.....	86
Fig. (12a) : Effect of different inoculum size on rifamycins production by free cells.....	91
Fig. (12b) : Effect of different inoculum size on rifamycins production by immobilized cells.....	92
Fig. (13a) : Effect of different pH values on rifamycins production by free cells.....	96
Fig. (13b) : Effect of different pH values on rifamycins production by immobilized cells.....	97
Fig. (14a) : Effect of different concentrations of yeast extract on rifamycins production by free cells.....	102
Fig. (14b) : Effect of different concentrations of yeast extract on rifamycins production by immobilized cells.....	103

## IX

	Page
Fig. (15a) : Effect of different concentrations of magnesium sulfate on rifamycins production by free cells.....	108
Fig. (15b) : Effect of different concentrations of magnesium sulfate on rifamycins production by immobilized cells.....	109
Fig. (16a) : Effect of different concentrations of glucose on rifamycins production by free cells.....	113
Fig. (16b) : Effect of different concentrations of glucose on rifamycins production by immobilized cells.....	114
Fig. (17a) : Effect of different concentrations of calcium chloride on rifamycins production by free cells.....	118
Fig. (17b) : Effect of different concentrations of calcium chloride on rifamycins production by immobilized cells.....	119
Fig. (18) : Effect of different grades of Glass wool as immobilizing matrix on rifamycins production by immobilized cells.....	130
Fig. (19) : Effect of different weights of Glass wool as immobilizing matrix on rifamycins production.....	134

## X

	Page
Fig. (20) : Effect of different Inoculum size on rifamycins production by cells immobilized on glass wool.....	137
Fig. (21) : Effect of different glucose concentrations on rifamycins production by cells immobilized on glass wool.....	140
Fig. (22) : Continuous production of rifamycins by cells immobilized in calcium alginate beads for 6 repeated batches.....	144
Fig. (23) : Continuous production of rifamycins by immobilized cells on glass wool surface for 6 repeated batches using glucose as C-source, and 96 h. hatch time.....	151
Fig. (24) : Continuous production of rifamycins by immobilized cells on glass wool surface for 6 repeated batches using sucrose as C-source, and 96 h. batch time.....	152
Fig. (25) : Continuous production of rifamycins by immobilized cells on glass wool surface for 6 repeated batches using glucose as C-source, and 48 h. batch time.....	153
Fig. (26) : Continuous production of rifamycins by immobilized cells on glass wool surface for 6 repeated batches using sucrose as C-source, and 48 h. batch time.....	154
