BIOGRAPHY

Date and Place of Birth : 27 February 1955, El Menia

Date of Graduation : June 1979

Degrees Awarded : B.Sc., (Entomology - Chemistry)

1979, Faculty of Science,

Ain Shams University

M.Sc., Degree (Entomology)

1986, Faculty of Science,

Ain Shams University

Occupation : Assistant Lecturer,

Entomology Department,

Faculty of Science,

Ain Shams University

Date of Registration for

the Ph.D. Degree : 14 December, 1987

DEDICATED WITH LOVE

TO MY FATHER AND MY MOTHER

ACKNOWLEDGEMENTS

The author wishes to express her gratitude to Professor Dr. Hashim A. Abdel Rahman, Department of Entomology, Faculty of Science, Ain Shams University, for his guidance, kind encouragement and reading and correcting the manuscript.

My deepest thanks are due to Professor Dr. Akila M. El Shafei, Department of Entomology, Faculty of Science, Ain Shams University, for continuous encouragement, valuable advice and reading the manuscript.

The author is also indebted with sincerest gratitude and appreciation to Dr. Peter F. Credland, Department of Biology, Royal Holloway and Bedford New College, University of London, for his direct supervision, kind encouragement, valuable advice, provision of different laboratory facilities, help preparing and reading the manuscript.

The author wishes to express her appreciation to all people at the Biology Department, Royal Holloway and Bedford New College, University of London, and in particular to Zig Podhorodecki, for his great assistance in taking, developing and printing the photographs.

Thanks are due to the staff members and colleagues, Department of Entomology, Ain Shams University for their kind cooperation.

Finally, my deepest thanks are due to the Egyptian Government for financial support; and to all staff members at the Egyptian Education Bureau in London for their kindness and hospitality during the period of my study in the United Kingdom.

LIST OF ABBREVIATIONS USED IN THE PRESENT INVESTIGATION

ADK = adenylate kinase

ADP = adenosine diphosphate

AMP = adenosine monophosphate

ATP = adenosine triphosphate

CA = cellulose acetate

CTH = constant temperature and humidity

DNA = deoxyribose nucleic acid

EDTA = ethylendiamine tetracetic acid

G-6-PDH = glucose 6-phosphate dehydrogenase

h = hour

Hcl = hydrochloric acid

IITA = International Institute for Tropical Agriculture

IDH = isocitrate dehydrogenase

MgCl, = magnesium chloride

MDH = malate dehydrogenase

ME = malic enzyme

M = mole

MTT = methyl thiazolyl blue

NAD = nicotinamide adenine dinucleotide

NADP = nicotinamide adenine dinucleotide phosphate

NaoH = sodium hydroxide

PGM = phosphoglucomutase

PMS = phenazine methosulphate

R.H. = relative humidity

TDRI = Tropical Development and Research Institute

I. INTRODUCTION

I. INTRODUCTION

The cowpea weevil, or the cowpea seed beetle as it is more accurately referred to, <u>Callosobruchus maculatus</u> (F.), is the principal post harvest pest of cowpea seeds. It occurs wherever the crop is grown; and frequently infests up to 100% of the stored seeds within 3 to 5 months under ordinary storage conditions (Singh, 1980).

Adults of <u>C</u>. <u>maculatus</u> are known to occur in two forms: active and normal (Caswell, 1960). The two forms differ not only in their morphological characters, which are used to identify them, but also in their physiological characters and behaviour as well (Taylor and Agbaje, 1974). Caswell (1960) suggested a genetic factor to produce the active form, because laboratory populations gradually lose the ability to produce active beetles even when crowded.

The term biotype is defined by Diehl and Bush (1984) as a temporary and provisional designation for cases where biological differences have been observed between organisms, but where the genetic basis and evolutionary status of the differences have yet to be ascertained.

It may also represent evolutionary transient in the process of speciation; and develop through natural selection
