

**INCIDENCE OF PULMONARY CANDIDIASIS
AND
ASPERGILLOSIS IN CANCER PATIENTS**

Thesis

Submitted for partial fulfillment of master degree in
clinical pathology

Presented by

George Sobhy Gorgy

M.B.B.Ch

Under the supervision of

Prof. Dr. Ragaa Mahmoud Lasheen

Professor of clinical pathology
Ain Shams University

Prof. Dr. Hadia Hussein Bassem

Ass. professor of clinical pathology
Ain Shams University

Dr. Eman Mohammed Kamel

Lecturer of clinical pathology
Ain Shams University

ACKNOWLEDGEMENT

First, I thank **“God”** for granting me the power to proceed and to accomplish this work.

I would like to express my endless gratitude and appreciation to **Prof. Dr. Ragaa Mahmoud Lasheen**, Professor of Clinical Pathology, Ain Shams University for giving me the honour of working under her supervision and for providing me with a lot of encouragement and support throughout this work and always.

I do appreciate the kind and active participation of **Prof. Dr. Hadia Hussien Bassem**, Assistant Prof. of Clinical Pathology, Ain Shams University, in the clinical part of this work.

Thanks are due to **Dr. Eman Mohammed Kamel**, Lecturer of Clinical Pathology, Ain Shams University for her encouragement, and honest assistance in every step of this work. Truly she gave me a lot of guidance, and support to accomplish this work in the appropriate way.

List of tables

Table 1	Predisposing factors to fungal infection	10
Table 2	The differences between taxonomic classes of fungi	19
Table 3	Classification of more commonly encountered human mycosis and their etiologiical agents	21
Table 4	Classification of genus <i>Aspergillus</i>	23
Table 5	Characteristics of common pathogenic <i>Aspergillus</i> species	26
Table 6	Clinical forms of allergic Aspergillosis	31
Table 7	The medically important pathogenic species of <i>Candida</i>	43
Table 8	The key characteristic of the genus <i>Candida</i>	43
Table 9	Common <i>Candida</i> implicated in human infection	50
Table 10	Characteristic features of commonly encountered <i>Candida</i> species on corn meal agar	57
Table 11	Characteristics of <i>Candida</i> species most often isolated from clinical specimen	59
Table 12	The pulmonary mycotic disease	64
Table 13	Summarize age, sex, diagnosis and treatment of studied cases	74-75
Table 14	Summarize age, sex, diagnosis, neutrophil count, type of treatment, isolated fungi, <i>Candida</i> , and <i>Aspergillus</i> of antibody titre of the patients group	93-94
Table 15	Summarize age, sex, isolated fungi by culture, <i>Candida</i> antibody titre, and <i>Aspergillus</i> antibody titre in control group	95
Table 16	Incidence of fungi isolated among patients and control groups as regards culture	96
Table 17	Incidence of different types of <i>Aspergillus</i> species in patients group as regards culture	97
Table 18	Incidence of different types of <i>Candida</i> species in patients group as regards culture	97
Table 19	Identification of <i>Candida albicans</i> by germ tube test and chlamydospore formation in comparison with carbohydrate assimilation test	97
Table 20	Incidence of fungal infection among patients and control groups as regards indirect hemagglutination	99
Table 21	Comparison between patients and control group regarding <i>Aspergillus</i> antibody titre	100

List of tables

Table 22	Comparison between patients and control group regarding Candida antibody titre	101
Table 23	Incidence of Aspergillus in patients group by indirect hemagglutination when compared with culture	102
Table 24	Incidence of Candida in patients group by indirect hemagglutination when compared with culture	102
Table 25	Describe the mean, standard deviation, maximum, and minimum of age as regards patients and control groups	103
Table 26	The number and frequency of positive culture and significant titre in relation to sex	103
Table 27	Correlation between neutrophil count and indirect hemagglutination titre in Aspergillus and Candida	103
Table 28	Relationship between types of malignancy and detection of Aspergillus by culture and indirect hemagglutination antibody titre	105
Table 29	Relationship between types of malignancy and detection of Candida by culture and indirect hemagglutination antibody titre	106
Table 30	Relationship between types of treatment and detection of Aspergillus by culture and indirect hemagglutination antibody titre	107
Table 31	Relationship between types of treatment and detection of Candida by culture and indirect hemagglutination antibody titre	108

List of figures

Figure 1	Identification scheme of Candida	55
Figure 2	Incidence of fungi isolated among patients group as regards culture	96
Figure 3	Incidence of different types of Aspergillus species among patients group as regards culture	98
Figure 4	Incidence of different types of Candida species among patients group as regards culture	98
Figure 5	Incidence of fungal infection among patients group as regard detection of significant antibody titre	99
Figure 6	Comparison between patients and control groups regarding Aspergillus antibody titre	100
Figure 7	Comparison between patients and control groups regarding Candida antibody titre	101
Figure 8	Correlation between Aspergillus antibody titre and neutrophil count in patients group	104
Figure 9	Correlation between Candida antibody titre and neutrophil count in patients group	104
Figure 10	Relationship between types of malignancy and detection of Aspergillus by culture and indirect hemagglutination titre	105
Figure 11	Relationship between types of malignancy and detection of Candida by culture and indirect hemagglutination titre	106
Figure 12	Relationship between types of treatment and detection of Aspergillus by culture and indirect hemagglutination titre	107
Figure 13	Relationship between types of treatment and detection of Candida by culture and indirect hemagglutination titre	108

List of photoes

- Photo 1 *Aspergillus flavus* by block culture technique stained by lactopheol blue as seen under microscope 86
- Photo 2 Chlamydospores formation present on pseudohyphae of *Candida albicans* on cornmeal agar media as seen under microscope 87
- Photo 3 Carbohydrate assimilation test of *C. guilliermondii* as seen on sugar assimilation agar culture media 88
