

Transcranial Color Doppler Sonography in Infantile Hydrocephalus

Thesis

*Submitted for Partial Fulfillment of
M.D. Degree*

In

Radiodiagnosis

By

Hanan Abd El-Aziz Amr
(M.B., B. Ch. - M.Sc in Radiodiagnosis)

Supervised By

Prof. Dr. Salwa Taha Ahmed Esmail

*Professor of Radiodiagnosis
Faculty of Medicine
Ain Shams University*

Assist. Prof. Dr. Allia Abdallah El-Jiky

*Assistant Professor of Radiodiagnosis
Faculty of Medicine
Ain Shams University*

Dr. Eman Soliman Metwali

*Lecturer of Radiodiagnosis
Faculty of Medicine
Ain Shams University*

**Faculty of Medicine
Ain Shams University
1998**

Acknowledgment

Impressed with the encouragement of **Prof. Dr. Salwah Taha Ahmed Esmail**, Professor of Radiodiagnosis, Faculty of Medicine, Ain Shams University I wish to thank her all sincerely for her time, interest and commitment. I am also grateful to her for her insightful supervision and valuable comments which helped me most to choose, initiate and complete this work in its present form.

Special thanks are also due to **Dr. Alia Abdallah El-Jiky** Assistant Professor of Radiodiagnosis, Faculty of Medicine, Ain Shams University, who gave generously of her time and provided detailed criticisms to which I tried to respond and which helped me most to clarify many hazy areas.

I would like to thank **Dr. Eman Soliman Metwali**, Lecturer in Radiodiagnosis, Faculty of Medicine, Ain Shams University, she devoted a lot of her precious time for supervision, valuable guidance and continuous encouragement in completing this work.

I wish to express my thank to all **Staff members of Radiodiagnosis Department**, Faculty of Medicine, Ain Shams University, my Professors and my colleagues for their valuable assistance, cooperation and advice during the study.

Finally no words can express the warmth of my feelings to my family for their understanding and patience.

Contents

• Introduction and Aim of the Work	1
• Anatomical Consideration	3
* Gross anatomy.....	3
* Sonographic anatomy	13
• Pathology of hydrocephalus	29
• Review of Literature	
* Basic principles of Doppler study	36
* Technical considerations	52
* Manifestations of duplex Doppler sonography in infantile hydrocephalus.....	60
• Material and Methods	80
• Results	85
• Illustrative Cases	95
• Discussion	166
• Summary and Conclusion	179
• References	184
• Arabic Summary	

List of Tables

<i>Table No.</i>	<i>Details</i>	<i>Page No.</i>
1	Classification of hydrocephalus	30
2	Ultrasound modalities	43
3	Correlation of CT, B-mode and Doppler findings of Group I (Control group).	85
4	Correlation of CT, B-mode and Doppler findings of Group II (Progressive hydrocephalus).	86
5	Comparison of Doppler data between Group I (control group) and Group II (Progressive hydrocephalus).	87
6	Doppler data versus intracranial pressure (ICP) in Group II (progressive hydrocephalus).	88
7	Comparison of Doppler data pre and post operative in Group II (progressive hydrocephalus).	89
8	Follow-up cases after surgery for myelomeningocele.	90
9	Correlation of CT, B-mode and Doppler findings in 10 patients of Group II presented with symptoms suggestive shunt malfunctioning.	91
10	Correlation of CT, B-mode and Doppler findings in 3 cases of Group II developed subdural collection following surgery.	92

11	Correlation of CT, B-mode Doppler findings in Group III (arrested hydrocephalus).	93
12	Comparison of Doppler data between Group I (control group) and Group III (arrested group).	94

List of Figures

<i>Figure No.</i>	<i>Details</i>	<i>Page No.</i>
1	The ventricles of the brain illustrating their relative position	3
2	Ventricular system. A. from the rostral (and ventral) brain surface. B. from the lateral brain surface.	6
3	Diagram of a coronal section through the lateral and third ventricles. The pia matter or the tela choroidae is shown in red and the ependyma in blue	7
4	Sagittal view of the brain and spinal cord to illustrate the circulation of the cerebrospinal fluid. The direction of the CSF flow is indicated by arrows	10
5	Diagram of the arteries at the base of the brain, showing the constitution of the arterial circle.	11
6	A. Coronal views of the neonatal head are made through the anterior fontanelle. c. The transducer is angled from the anterior skull to the posterior skull to record various parts of the neonatal brain anatomy. Axial plane of view. A, reid's baseline, R.B. Sagittal views of the neonatal head	13
7	Coronal scan slightly behind the level of the foramen of Monro.	14
8	Scan through the heads of the caudate nuclei and the frontal horns.	16
9	Coronal scan through the region of the quadrigeminal cistern.	17

10	Scan through the region of the trigone of the lateral ventricle.	18
11	Midsagittal scan. A. Diagrammatic representation of this level.	20
12	Parasagittal scan through the body of the lateral ventricle.	22
13	Parasagittal scan through the sylvian fissure.	23
14	A. Graphic representation of a wave as a periodic fluctuation in the amplitude of a quantity, such as pressure, as a function of time, $f(t)$. B. To store or manipulate these data, each point along the wave can be assigned a numeric value, which is then recorded and operated on individually, as is done using digital computers	38
15	Schematic diagram of the Doppler effect in vascular ultrasonography.	39
16	Doppler indices	41
17	The principle of continuous wave Doppler sonography	44
18	Sampling the Doppler signal at discrete times in pulsed Doppler.	49
19	ACA (From the anterior fontanel)	53
20	MCA (From the anterior fontanel)	54
21	Available temporal ultrasonic windows and probe placement.	54
22	MCA (Transtemporal approach)	56
23	Ventricular index.	61
24	Aqueductal stenosis.	62
25	Unilateral obstruction of the foramen of Monro.	63
26	Extraventricular obstructive hydrocephalus.	63

27	Chiari II malformation.	64
28	Chiari II malformation.	64
29	Chiari II malformation with aqueductal stenosis.	65
30	Dandy-Walker syndrome.	66
31	Serial Doppler studies of intracranial vessels (internal carotid artery) in a premature neonate with intraventricular and intracerebral hemorrhage.	69
32	Ventricular and intraparenchymal pressure monitoring systems.	77
33	Case No. (1)	96
34	Case No. (2)	98
35	Case No. (3)	101
36	Case No. (3)	102
37	Case No. (4)	105
