STATEMENT

This dissertation is submitted to Ain Shams University for the degree of M.Sc. in Civil Engineering.

The work included in this thesis was carried out by the author in the department of Structural Engineering ,Ain Shams University, from October 1986 to March 1990.

No part of this thesis has been submitted for a degree or a qualification at any other university or institution.

Date : March, 1990

Abstract of M.Sc. Thesis Submitted by :

Ahmed Mosalem Samieh Monaza

Title of Thesis " DEFORMATION ANALYSIS OF EARTH EMBANKMENTS "

Supervisors: (1) Prof. Dr. Farouk I. El-kady

(2) Dr. Fathalla EL-Nahhas

Registration Date: 13/10/1986 Examination Date: March 1990

Abstract: Geotechnical design of earth embankments was conventionally based on the overall stability of the embankment and its foundation against failure. This traditional approach does not give any direct information about the magnitude and distribution of the deformation within the embankment and its foundation during or after construction. Review of previous studies indicated the great potential of numerical methods for predicting such deformation.

This thesis presents a parametric study, using the finite element method, to investigate the main factors controlling the deformation of the embankment and its yielding foundation. Different constitutive models linear, bilinear and nonlinear models, were employed. An algorithm for predicting nonlinear deformations is suggested and factors affecting the predicted deformation were parametrically investigated. Furthermore, results of the finite element analysis were compared with field measurements compiled during construction of an earth embankment resting on stratified foundation.

Keywords : Earth embankment, Yielding foundation,
Finite Element Method, Constitutive Models,
Deformation, Field measurements

ACKNOWLEDGMENT

This research has been carried out at the Department of Structural Engineering, Faculty of Eng., Ain Shams University, under the supervision of Professor Dr. Farouk El-Kadi and Dr. Fathalla El-Nahhas.

I Wish to express my thanks and cordial gratitude to Prof. Dr. Farouk El-Kadi, Professor of Geotechnical Eng., Faculty of Eng., Ain Shams University for his stimulating supervision and guidance throughout this study that made the completion of this work possible.

I am greatly indebted to Dr. Fathalla El-Nahhas, Associate Professor of Geotechnical Eng., Faculty of Eng., Ain Shams University, for his continued encouragement and invaluable advices during every stage of this research. He willingly spent long hours in discussion and reviewing especially during preparation of the final draft of this thesis. It was privilege and pleasure to work under his supervision.

My utmost gratitude and deep acknowledgment to my parents for their patience and encouragement. Thanks are also extended to my whole family for encouragement and moral support during the entire time of the research.

Finally, I wish to present my thanks to my friend Essam Amar for valuable discussions and his help during final drafting.

TABLE OF CONTENTS

Chapter	Page
1. INTRODUCTION	
1.1 General	1
2.1 Objective and Organization of The Thesis	4
2. REVIEW OF PREVIOUS STUDIES	
2.1 Introduction.....	7
2.2 Load-Deformation Behaviour of Soils	8
2.2.1 Linear elastic model	12
2.2.2 Bilinear model	12
2.2.3 Multilinear model	14
2.2.4 Mathematical function models	18
2.2.4.1 Hyperbolic function model (E, ν)	18
2.2.4.2 Hyperbolic function model (G,K)	22
2.2.4.3 Hyperbolic function model (E,K)	24
2.2.4.4 Spline function model	25
2.3 Summary and Discussion on Stress-Strain Idealization of Soils	26
2.4 Deformation Prediction	30
2.5 Continuum Analysis Using Finite Element Method	33
2.5.1 Finite element method in geotechnical engineering	36
2.5.2 Construction modeling in analysis	39
2.5.2.1 Gravity-turn-on analysis	39
2.5.2.2 Sequential analysis	40
2.5.3 Deformation analysis of earth embankments	42
