FACULTY OF AGRICULTURE  
AIN SHAMS UNIVERSITY**

**1988**

APPROVAL SHEET

Name : ABDEL KADER ABDEL FATTAH ABDEL KADER.

Title : Effect of Soil Conditioners on the Nutritional  
Status of Soil and Plant.

This thesis has been approved by :

Prof. Dr. *S. E. Shery*

Prof. Dr. *Monir. Abbas*

Prof. Dr. *Mostafa H. Hilal*

Date : / /1988

**DEDICATED  
TO  
MY FATHER  
&  
ALL MY FAMILY**

### ACKNOWLEDGEMENT

My sincere gratitude to Prof. Dr. S. M. El-Sherif Prof. of Soil Science, Soils Dept. Fac. of Agric., Ain Shams Univ., for supervising and giving every possible help as well as for his encouragement, and valuable advice and to Prof. Dr. A. F. El-Sherif, Res. Prof. of Soil Science, Soils and Water Use Dept., National Research Centre, for suggesting the problem, supervising this work and help during writing the manuscript as well as for his encouragement, valuable advice and stimulating criticism. Thanks also to Dr. O.A.El-Hady, Assoc. Res. Prof. of Soil Science, Soils and Water Use Dept. National Research Centre, for his guidance and valuable help during experimentation and writing the manuscript.

My thanks also are due to the authorities of National Research Centre and Staff members of Soils and Water Use Dept. for the offered Facilities and Materials that made this work possible.

## CONTENTS

	<u>Page</u>
1. INTRODUCTION .....	1
2. REVIEW OF LITERATURE .....	3
2.1. Soil Conditioning .....	3
2.2. The properties of some synthetic soil conditioners .....	6
2.2.1. Bitumen emulsion (Bit.) .....	6
2.2.2. Polyacrylamide (PAM) .....	8
2.2.3. Uresol (URE) .....	11
2.2.4. Ureaformaldehyde (UF) .....	13
2.3. Soil conditioners and nutritional status of soil and plant .....	15
2.3.1. Soil conditioners and water use efficiency .....	15
2.3.2. Soil conditioner and plant growth....	16
2.3.3. Soil conditioners and fertility status of soil .....	19
2.3.4. Soil conditioners and nutrients uptake by plants .....	22
3. MATERIALS AND METHODS .....	27
3.1. Materials .....	27
3.1.1. Soils .....	27
3.1.2. Soil conditioners .....	27
3.2. Experimental .....	32
3.2.1. First Experiment .....	32
Effect of surface mulching of the soil with soil conditioners on plant growth nutrients uptake, water and fertilizers use efficiency.....	32

	<u>Page</u>
3.2.2. Second Experiment .....	35
Effect of conditioner type, application rate and fertilization treatments on some soil characteristics .....	35
3.2.3. Third Experiment.....	40
Effect of conditioner type, application rate and fertilization treatments on plant growth, nutrients uptake and fer- tilizer use efficiency by plant .....	40
3.3. Methods of Determination .....	43
3.3.1. Soil analyses .....	43
3.3.2. Plant analyses .....	46
3.3.3. Analysis of soil conditioners .....	46
3.3.4. Statistical analysis .....	47
4. RESULTS AND DISCUSSIONS .....	48
4.1. Effect of surface mulching of the soil with soil conditioners on plant growth, nutrients uptake, water and fertilizer use efficiency by plants .....	48
4.2. Effect of conditioner type, application rate and fertilization treatments on some soil cha- racteristics .....	67
4.3. Effect of conditioner type, application rate and fertilization treatments on plant growth, nutrients uptake and fertilizer use efficiency by plants.....	95
5. SUMMARY .....	137
6. REFERENCES .....	143
7. ARABIC SUMMARY.	

LIST OF TABLES

<u>Table No.</u>	<u>Page</u>
1. The main physical and chemical properties of the studied soils	
A. Physical properties .....	28
B. Chemical properties .....	29
2. Description of soil conditioners .....	30
3. The analyses of the examined soil conditioners for some Macro, Micronutrients and heavy metals .....	31
4. Vegetative growth data of barley plants grown in sandy soil mulched with soil conditioners at different application rates .....	49
5. Vegetative growth data of barley plants grown in sandy calcareous soil mulched with soil conditioners at different application rate .....	50
6. Nutrients uptake by barley plants grown in sandy soil mulched with soil conditioners at different application rates .....	54
7. Nutrients uptake by barley plants grown in sandy calcareous soil mulched with soil conditioners at different application rates .....	55
8. Water use efficiency by barley plants grown in sandy soil mulched with soil conditioners at different application rates .....	61
9. Water use efficiency by barley plants grown in sandy calcareous soil mulched with soil conditioners at different application rates .....	62

<u>Table No.</u>	<u>Page</u>
10. Fertilizers use efficiency by barley plants grown in sandy soil mulched with soil conditioners at different application rates .....	63
11. Fertilizers use efficiency by barley plants grown in sandy calcareous soil mulched with soil conditioners at different application rates .....	64
12. Effect of conditioners type and application rate on some soil characteristics related to plant nutrition .....	68
13. Effect of conditioner type, application rate and conditioning-fertilization treatments on soil pH..	71
14. Effect of conditioner type, application rate and conditioning fertilization treatments on electrical conductivity of soil paste extract (mmhos/cm/25°C) .....	73
15. Effect of conditioner type , application rate and conditioning-fertilization treatments on CEC of the soil(meq/100g soil).....	76
16. Effect of conditioner type, application rate and conditioning-fertilization treatments on the surface area of the soil (m <sup>2</sup> /g). .....	77
17. Effect of conditioner type, application rate and conditioning-fertilization treatments on extractable nitrogen (ppm) .....	80

<u>Table No.</u>	<u>Page</u>
18. Effect of conditioner type, application rate and conditioning-fertilization treatments on extractable phosphorus (ppm) .....	81
19. Effect of conditioner type, application rate and conditioning-fertilization treatments on extractable potassium (ppm) .....	82
20. Effect of conditioner type, application rate and conditioning-fertilization treatments on percentage water stable structural units 0.5 mm in diameter .....	94
21. Dry weight of barley plants (g./plant) grown in sandy soil as affected by conditioning-fertilization treatments .....	97
22. Nutrients uptake (mg/plant) by barley plants grown in sandy soil as affected by conditioning-fertilization treatments.....	101
23. Fertilizers use efficiency barley plants grown in sandy soil as affected by conditioning-fertilization treatments .....	106
24. Dry weight of broad bean plants (g/plant) grown in sandy soil as affected by conditioning-fertilization treatments .....	107
25. Fertilizers use efficiency by broad bean plants grown in sandy soil as affected by conditioning-fertilization treatments .....	108

LIST OF FIGURES

<u>Figure No.</u>	<u>Page</u>
1. Nitrogen uptake by barley plants grown in sandy soil mulched with soil conditioners at different application rates .....	57
2. Nitrogen uptake by barley plants grown in sandy calcareous soil mulched with soil conditioners at different application rates .....	57
3. Phosphorus uptake by barley plants grown in sandy soil mulched with soil conditioners at different application rates .....	58
4. Phosphorus uptake by barley plants grown in sandy calcareous soil mulched with soil conditioners at different application rates .....	58
5. Potassium uptake by barley plants grown in sandy soil mulched with soil conditioners at different application rates .....	60
6. Potassium uptake by barley plants grown in sandy calcareous soil mulched with soil conditioners at different application rates .....	60
7. Effect of conditioner type of application rate and conditioning fertilization treatments on extractable nitrogen (ppm) from sandy (S) and sandy calcareous (C) soils .....	83

<u>Figure No.</u>	<u>Page</u>
8. Effect of conditioner type of application rate and conditioning fertilization treatments on extractable phosphorus (ppm) from sandy (S) and sandy calcareous (C) Soils .....	84
9. Effect of conditioner types and application rate and conditioning fertilization treatments on extractable potassium (ppm) from sandy (S) and sandy calcareous (C) Soils .....	85
10. Percent increase or decrease in extractable macro-nutrients as affected by soil conditioners and application rates and method of nutrient combination in sandy soil .....	86
11. Percent increase or decrease in extractable macro-nutrients as affected by conditioners and application rates and methods of nutrient combination in sandy calcareous soil .....	87
12. Effect of conditioner types and application rate and conditioning fertilization treatments on N. uptake by barley plants grown in sandy soil .....	102
13. Effect of conditioner type and application rate and conditioning fertilization treatment on P. uptake by barley plants grown in sandy soil .....	103

<u>Figure No.</u>	<u>Page</u>
14. Effect of conditioner type and application rate and conditioning fertilization treatments on K uptake by barley plants grown in sandy soil .....	104
15. Effect of conditioner type and application rate and conditioning fertilization treatments on N. uptake by broad bean plants grown in sandy soil .....	113
16. Effect of conditioner type and application rate and conditioning fertilization treatments on P. uptake by broad bean plants grown in sandy soil .....	114
17. Effect of conditioners type and application rate and conditioning - fertilization treatments on K. uptake by broad bean plants grown in sandy soil .....	115
18. Effect of conditioner type and application rate and conditioning fertilization treatments on N. uptake by barley plants grown in sandy calcareous soil ....	122
19. Effect of conditioner type and application rate and conditioning fertilization treatment on P. uptake by barley plants grown in sandy calcareous soil .....	123
20. Effect of conditioner type and application rate and conditioning fertilization treatment on K. uptake by barley plant grown in sandy calcareous soil .....	124
21. Effect of conditioner type and application rate and conditioning fertilization treatment on N. uptake by broad bean plants grown in sandy calcareous soil...	125

<u>Figure No.</u>	<u>Page</u>
22. Effect of conditioner type application rate and conditioning fertilization treatment on P. uptake by broad bean plants grown in sandy calcareous soils .....	134
23. Effect of conditioner type application rate and conditioning fertilization treatments on K. uptake by broad bean plants grown in sandy calcareous soil.....	135

LIST OF PHOTOS
