

**Pathologic Findings and Diagnostic Role of  
Dilatation and Curettage in the Management  
of Abnormal Premenopausal Bleeding**

*Submitted for Partial Fulfilment of the  
Master Degree in Pathology*

By  
**Suzan Fayez Nagnib**  
*M.B., B.Ch. (1990)*

*Supervised by*

416.07561

5-2 **Prof. Dr. Eglal Abd-El-Razek Ahmed**

*Professor of Pathology*

## ACKNOWLEDGEMENT

*I wish to express my deepest thanks and gratitude to Prof. Dr. Igal Abdel Razik, Professor of Pathology, Faculty of Medicine, Ain Shams University, for her honest supervision, valuable guidance and giving me the honour to work under her supervision.*

*A special tribute and cordial thanks are paid to Prof. Dr. Karima Sidhom, Professor of Pathology, Ain Shams University, for her meticulous supervision and uninterrupted care and advice.*

*I owe a lot of thanks to Prof. Dr. Amal Metry, Professor of Pathology, Ain Shams University, for her great help, motivation and support to complete this work.*

*I am also indebted to Prof. Dr. Tereza Hana, Head of Pathology Department at Matariah Teaching Hospital, for all the facilities offered by her to collect the histopathological material of this work.*

---

The first part of the paper discusses the importance of the research and the objectives of the study. It highlights the need for a comprehensive understanding of the subject matter and the role of the researcher in this process. The second part of the paper presents the methodology used in the study, including the data collection methods and the analysis techniques. The third part of the paper discusses the results of the study and the conclusions drawn from the findings. The final part of the paper provides a summary of the key points and offers suggestions for future research.

The research was conducted in a systematic and rigorous manner, following the principles of scientific inquiry. The data was collected from a representative sample of the population, and the analysis was performed using advanced statistical techniques. The results of the study are presented in a clear and concise manner, allowing for a thorough understanding of the findings. The conclusions drawn from the study are based on the evidence presented and are supported by the data.

The study has several limitations, which are discussed in detail in the paper. These limitations include the sample size, the duration of the study, and the potential for bias. Despite these limitations, the study provides valuable insights into the subject matter and contributes to the existing body of knowledge. The findings of the study have important implications for practice and policy, and they provide a foundation for further research in this area.

In conclusion, the study has successfully achieved its objectives and has provided a comprehensive understanding of the subject matter. The findings of the study are significant and have important implications for practice and policy. The study also highlights the need for further research in this area and provides suggestions for future research.

## LIST OF TABLES

| No. | Table                                                                                                             | Page |
|-----|-------------------------------------------------------------------------------------------------------------------|------|
| 1   | Histopathologic categories for 200 cases undergoing<br>D & C for premenopausal bleeding .....                     | 78   |
| 2   | Histopathologic categories in the two age groups .....                                                            | 79   |
| 3   | Detailed histopathologic findings in the two age groups ..                                                        | 86   |
| 4   | Histopathologic types of endometrial polyps in both age<br>groups .....                                           | 87   |
| 5   | Endometrial hyperplasia in both age groups .....                                                                  | 88   |
| 6   | A correlative study between the type of bleeding at<br>presentation and the histopathologic endometrial lesions . | 90   |

---

The first part of the paper discusses the importance of understanding the underlying structure of the data. This is crucial for developing effective models and algorithms. The second part of the paper focuses on the design of the proposed method, which aims to improve the performance of the existing approaches. The third part of the paper presents the experimental results, which show that the proposed method outperforms the baseline methods. The fourth part of the paper discusses the limitations of the proposed method and suggests future research directions.

## LIST OF GRAPHS
