PHYSICAL AND SPECTRAL PROPERTIES STUDY FOR TIN OXIDE (SnO_2) THIN FILM PREPARED BY SPRAY PYROLYSIS

A Thesis
Submitted to College for Girls Ain Shams University
For The Degree Of M.Sc.
(Physics).

ACKNOWLEDGEMENTS

I kneel humbly to GOD thanking HIM for showing me the right path, without HIS help my efforts would have gone astray.

I wish to express my deep gratitude and thanks to:

1. ***Prof. Dr.*** **Aida EL Bialy**, Physics Department, College for Girls, Ain Shams University.
2. ***Prof. Dr.*** **Hassan Hassan Afify**, Solid State Physics Department, National Research Center.
3. ***Dr.*** **Salama Edward Demian**, Assistant Professor of Solid State Physics, National Research center.
4. ***Prof Dr.*** **M. Mohassen El Hagary**, Electronic Research Institute.

ACKNOWLDGEMENTS
LIST OF TABLES (i)
LIST OF FIGURES (ii)
ABSTRACT (xi)
SUMMARY (xiii)

CHAPTER (I)

INTRODUCTION

1.1 Introduction 1
1.2 Aim of The Present Work 1
1.3 Material Properties 2
1.4 Thin Solid Film Deposition Techniques 2
1.5 Some Applications of Tin Oxide 3
  1.5.1 Gas Sensors 3
  1.5.2 Heating Element 4

CHAPTER (II)

LITERATURE SURVEY 5

CHAPTER (III)

EXPERIMENTAL TECHINIQUES AND MEASUREMENTS

3.1. Solution preparation 43
3.2. Cleaning procedures 44
  3.2.1 Substrate cleaning 44
  3.2.2 Spray system cleaning 44
3.3. Spray system 44
  3.3.1 The atomizer 46
  3.3.2 The heater 46
  3.3.3 The compressor 46

Central Library - Ain Shams University

3.3.4 The solution pump ____ 46
3.4. Spray process ____ 47
3.5. Structural Diagonsis ____ 47
3.6. Optical measurements ____ 49
3.7. Film thickness measuremets ____ 52
3.7.1 Envelope method ____ 52
3.7.2 Multiple Beam Interferometry ____ 52
3.8. Electrical measurements ____ 57
3.8.1 Sheet resistance measurements ____ 57
3.8.2 Hall-effect measurements ____ 57
3.8.3 Effect of Gases on conductivity ____ 61
3.8.4 Heating Effect ____ 62

CHAPTER (IV)

RESULTS AND DISCUSSIONS

4.1 Structural Properties ____ 65
4.1.1 The effect of substrate temperature ____ 68
4.1.2 The effect of spray time ____ 72
4.1.3 The effect of incorporated atoms ____ 76
4.1.3.1 The effect of antimony ____ 76
4.1.3.2 The effect of aluminum ____ 76
4.1.3.3 The effect of fluorine ____ 80
4.2. Optical Properties ____ 82
4.2.1. The Transmission T(λ) and The Reflection R(λ) of pure and incorporated tin oxide films ____ 82
4.2.2. The film thickness ____ 85
4.2.3. The Optical Constants ____ 87
4.2.4. The energy band gap ____ 94
4.3. Electrical Properties ____ 98
4.3.1. The effect of substrate temperature ____ 98
4.3.2. The effect of spray time ____ 106
4.3.3. The effect of incorporated atoms ____ 111

Central Library - Ain Shams University

4.3.3.1 The effect of antimony 111
4.3.3.2 The effect of aluminum 114
4.3.3.3 The effect of fluorine 114
4.3.4. Effect of the ambient gas 119
4.3.5. Heating element 129
Conclusion 130

LIST OF TABLES

Table (1) Some of semiconductor materials could be prepared by the spray pyrolysis technique.

Table (2) The linear four point probes correction factor F* for thin film.

Table (3) The d-spacing values and their relative intensities for SnO_2 thin films prepared at different substrate temperatures and that for ASTM card for snO_2 powder.

Table (4) Values of lattice constants (a&c) for SnO_2 thin films and the ASTM data.

Table (5) The grain size of for SnO_2 thin films prepared by different techniques.

Table (6) The relative intensity (I/I_o) and d-spacing values for pure SnO_2 and SnO_2 incorporated with different aluminum ratios (2% - 10%)

Table (7) Data for SnO_2 thin films deposited by different techniques. Transmittance (T %), refractive index (n), extinction coefficient (k) and energy band gap E_g (eV)

Table (8) The packing density for SnO_2 thin films deposited at different substrate temperatures.

Central Library - Ain Shams University

Table (9) Data for SnO_2 thin films deposited by different techniques entire are given for substrate temperature (T_s), sheet resistance (R) and dc resistivity (ρ_{dc})

Table(10) Data for SnO_2 thin films deposited by different techniques. Film thickness (t μm), substrate temperature (T_S), Carrier concentration (n cm^{-3}) and mobility (μ $cm^2/V.s$)
