GROWTH RESPONSE OF HYOSCYAMUS MUTICUS L. TO TEMPERATURE
HARDENING IN RELATION TO ALKALOIDAL PATTERN

By

KAREMA MOHAMMED GAMAL EL-DIN

B. Sc. Agric. Ain Shams University, 1973

M. Sc. Horticulture, Ain Shams University, 1983

Under the Supervision of : Prof. Dr. Mahmoud R. Shedeed
Prof. of Horticulture

Prof. Dr. Khairy Mohamed
Prof. of Floriculture

ABSTRACT

This study was carried out to clear the effect of temperature hardening and amino acid treatments on the growth and alkaloidal pattern of Hyoscyamus muticus L.

For this target, two pot experiments were conducted in the seasons 1987/88 and 1988/89 at the Experimental Farm of the National Research Centre, Dokki, Giza, Egypt. The obtained result could be summarized in the following:

1. Response to heat-hardening treatments:

Seeds were exposed to heat at 40°C or 50°C for 10, 20 and 40 minutes in addition to the control treatment that took place at room temperature (ranging from 25 to 28°C the results of that experiment can be shown in the following:

1. The highest values of fresh and dry weight of the plant organs were obtained at the treatments either at 40°C for 40 minutes or 50°C for 10 minutes.
2. The highest values of total alkaloid, total nitrogen and photosynthetic pigments were obtained with the same mentioned treatments.

2. Effect of amino acids application:

Three amino acids (ornithine, proline and cysteine) were applied as foliar spray on henbane plants of 3 months age in the concentrations of 10, 50 and 100 mg/l. in addition to the control treatment. These treatments were repeated for another time after one week. The results of these experiment could be summarized in the following:

1. The highest values of vegetative growth measurements were obtained at the treatment 50 mg/l. ornithine and 100 mg/l. either proline or cysteine.
2. The highest total alkaloid, total nitrogen and photosynthetic pigments were obtained with the same treatments.

ACKNOWLEDGEMENT

The author wishes to express her deepest gratitude and sincere appreciation to Prof. Dr. M.R. Shedeed, Professor of Floriculture, Faculty of Agriculture, Ain Shams University and Prof. Dr. K.M. El-Gamassy, Professor of Floriculture, Faculty of Agriculture, Ain Shams University for supervision, valuable suggestions and continuous encouragement during all the course of this work. Also, the author introduces her deep thanks to Prof. Dr. Fatma Reda, Res. Professor of Plant Physiology, Prof. Dr.A. El-Moursi, Res. Professor of Plant Physiology, National Research Centre, for their supervision, constructive criticism and for revising the manuscript.

Thanks, are also due to the members of Botany Laboratory, National Research Centre for their co-operation during this work.
