

# **STUDIES ON SOME FACTORS AFFECTING GERMINATION AND TILLERING OF SUGARCANE**

BY

*Mohamed Abd El-Hamid Hamad Fergany*

*B. Sc. (Agric.) Ain Shams University 1991*

A thesis submitted in partial fulfillment  
of  
the requirement for the degree of

***Master of Science***

in  
Agriculture  
(Agronomy)

Department of Agronomy  
Faculty of Agriculture  
Ain Shams University

1997

**APPROVAL SHEET**

**STUDIES ON SOME FACTORS AFFECTING  
GERMINATION AND TILLERING OF  
SUGARCANE**

**BY**

**MOHAMED ABD EL-HAMID HAMAD FERGANY**

B.Sc. Agric., Ain Shams Univ., 1991

This thesis for M. Sc. degree has been approved by :

**Prof. Dr. Farouk H. Abdalla** *F.H. Abdalla*.....  
Prof. of Agron. and Vice-Dean of Fac. Agric., Assuit Univ.

**Prof. Dr. Hamed A. Khalil** *H. A. Khalil*.....  
Prof. Dr. of Agron., Ain Shams Univ.

**Prof. Dr. Tawakul Y. Rizk** *Tawakul*.....  
Prof. Dr. of Agron., Ain Shams Univ.

Date of Examination : 6 / 4 / 1997

***Mohamed Abd El-Hamid Hamad Fergany***

***B. Sc. Agric., Agronomy, Ain Shams University 1991***

**Under Supervision of**

***Prof. Dr. Tawakul Y. Rizk***

***Prof. of Agronomy, Dept. of Agronomy,  
Fac. of Agric., Ain Shams Univ.***

***Prof. Dr. Mohamed H. El-Agroudy***

***Prof. of Agronomy, Dept. of Agronomy,  
Fac. of Agric., Ain Shams Univ.***

***Prof. Dr. Ibrahim H. El-Geddawy***

***Head of Agronomy, Dept. Sugar crop  
Res. Inst., Agric. Res. Center***

## **Acknowledgement**

The author wishes to express his sincere appreciation and gratitude to his major supervisor Dr. Tawakul Y. Rizk , *professor of Agronomy, Agronomy Department, Faculty of Agric., Ain Shams University* for continuous supervision, guidance, helpful advice and valuable suggestions throughout the course of this investigation .

Deepest gratitude to Dr. M. H. El-Agroudy Prof. of Agronomy, Agronomy Dept. Faculty of Agric., Ain Shams University for his supervision and sincere help during the course of this work .

Sincere thanks to Dr. I. H. El-Geddawy Head of Agronomy Dept., Sugar Crops Res. Inst., Agric. Res. Center "ARC" for his supervision, valuable assistance and guidance during the course of this work .

Thanks are also extended to Dr. M. K. Aly Director of Sugar Crops Res. Section, Shandaweel Res. Station and the other staff at shandaweel Res. Station for their encouragement, cooperation and providing facilities throughout the field work of this investigation .

## **ABSTRACT**

Mohamed Abd El-Hamid Fergany . Studies on some factors affecting germination and tillering of sugarcane . Unpublished Master of Agriculture Science, Ain Shams University, Faculty of Agriculture, Agronomy Department, 1997 .

Two field experiments were conducted and repeated for two successive seasons of 1994/1995 and 1995/1996 in Shandweel Res. Station, Souhag Governorate .

The First experiment aimed to investigate the effect of three agronomical factors at three levels each ; row distances (100, 120 and 140 cm), Cutting sizes (2,4 and 6 buds / Cutting), and three cane varieties (F. 152 , G.T. 54 - 9 and G. 85 - 37 ) on growth, yield, components and Juice quality .

The second experiment aimed to investigate the effect of 10 - soaking treatments on germination, tillering, growth and yield of the cane variety G.T. 54 - 9 .

### **Results of the first experiment showed the following :**

- Row distance affected significantly the number of cane stalks / meter, stalk diameter at the late ages of growth, stalk weight, fiber % , number of millable cane / fed. sugar recovery % and sugar yield . Meanwhile, other studied characters, i.e germination % , stalk height, number of internodes and leaves / main stalk, chlorophyll content, TSS % , Brix % , Purity % and cane yield were not significantly affected .

- Cutting size affected significantly almost all studied characters with few exception such as ; chlorophyll content, TSS % , fiber % , Brix % , Purity % , Sugar recovery % , and number of millable cane / fed. Results revealed that planting by 4 budded

cane cuttings produced the highest values of germination % , number of stalk / meter , stalk dimentions, number of internodes / main stalk as well as cane and sugar yields .

The response of the 3 cane varieties under investigation to the studied characters varied greatly from one variety to the others, i.e. while the F 153 variety showed superiority over the other two varieties in germination % , number of cane stalks / meter, fiber % and Brix % , variety G.T. 54 - 9 produced the highest sugar recovery % as well as cane and sugar yields .

The results of the second experiment revealed that some soaking treatments, i.e. soaking in water, soaking in 5 % or 10 % nutrient solution were superior in their effects on germination % at early stage of growth, number of cane stalks / meter, stalk weight , stalk diameter, number of green leaves / main stalk, TSS % , Brix % , Purity % , number of millable cane / fed., cane and sugar yields . Soaking cane cuttings in 10 % nutrient solution increased both cane yield and sugar yield by about 8.6 % and 1.0 ton / fed. compared with the traditional method (No Soaking) .

**Key Words :**

Sugarcane - Variety - Row distance - Cutting size - Soaking treatments - Nutrient solution -  $GA_3$  -Germination - Tillering - Growth characters - Cane yield - Sugar yield - yield quality .

## Contents
