To The Spirit Of My Parents.

ACKNOWLEDGEMENT.

I am greatly indebted to prof. Dr. Gamal Abu Sinna professor of animal physiology , Zoology Department , Faculty of Science Ain Shams University for his kind supervision , guidance, encouragement and his careful review of the manuscript.

Appreciation is also extended to prof. Dr. Nadia El-Baih, Professor of animal physiology , Zoology Department, Faculty of Science Ain Shams University for her supervision , and critical reading through the manuscript .

I would like to express my sincere appreciation and deep gratitude to Dr. Ahmed Essam Fekry , professor assistant, Radiobiology Department , Nuclear Research , Center , Atomic Energy Authority , for planning , his supervision , helpful suggestion and his careful review of the manuscript.

Special thank are given to Dr. H.A. Mostafa, Radiobiology Department , Nuclaer Research center , Atomic Energy Authority , A.R.E.

LIST OF ABBREVIATIONS

Alb.	: Albumin.
A/G	: Albumin - Globulin ratio.
ALT	: Alanine aminotransferase (GPT).
AST	: Aspartate aminotransferase (GOT).
Bq.	: Bquril.
Conc.	: Concentrates.
CNS	: Cell number - size ratio.
Cwt.	: Carcass weight.
DNA	: Deoxyribonucleic acid.
FFB	: Fat free body.
FFDB	: Fat free dry body.
Fwt.	: Femur weight.
Glob.	: Globulin.
Gluc.	: Glucose.
GIwt.	: Gastrointestinal tract weight.
Gy	: Gray.
Hb.	: Hemoglobin content.
Hc.	: Hematocrit value.
IU	: International unit.
K. & T. Wt.	: Kidney and testis weight.
Lbwt.	: Live body weight.
Lwt.	: Liver weight.
r.	: Rad.
RBC.	: Red blood cells.
Sbwt.	: Slaughter body weight.
T.G.	: Triglycerides.
T.P.	: Total proteins.
WBC	: White blood cells.

LIST OF FIGURES

Figure		Page
1	DNA Standard Curve .	33
2	Glucose Standard Curve.	37
3	The relationship between insulin concentration and glucose uptake.	39
4	Effect of daily dose (8.6 Bq/rat Cs ¹³⁷) of internal gamma irradiation and insulin treatment (1 IU/rat for 10 days) through three months on body weight.	44

LIST OF TABLES

Table		page
1	The overall effects of daily dose of internal gamma irradiation (8.6 Bq Cs ¹³⁷ / rat) on body weight, feed and water intakes and body composition through three months.	43
2	The step-wise regression analysis of internally irradiated and insulin treated rats (The relationships between live body weight (Y) and both feed and water intakes (X) .	45
3	Effect of daily dose of internal gamma irradiation (8.6 Bq Cs ¹³⁷ /rat)on some hematological parameters for three months.	47
4	The overall effects of daily dose of internal gamma irradiation (8.6 Bq Cs ¹³⁷ / rat) on some hematological and biochemical parameters, through three months	48
5	Effect of daily dose of internal gamma irradiation (8.6 Bq Cs ¹³⁷ /rat)on some biochemical parameters for three months.	49
6	Effect of daily dose of internal gamma irradiation (8.6 Bq Cs ¹³⁷ /rat) on cellular aspects for three months.	51
7	The overall effects of daily dose of internal gamma irradiation (8.6 Bq Cs ¹³⁷ / rat)on cellular aspects through three months.	53

- 8 The overall effect of insulin treatment (1IU/day /rat for 10 days) on body weight , daily feed and water intaks and body composition through three months. 54
- 9 Effect of insulin treatment (1IU/day/rat for 10 days) on some hematological parameters through three months. 56
- 10 The overall effect of insulin treatment (1IU/day /rat for 10 days) on some hematological and biochemical parameters through three months. 57
- 11 Effect of insulin hormone treatment (1 IU/day/rat for 10 conscutive days) on some biochemical parameters through three months. 58
- 12 Effect of insulin treatment (1IU /day / rat for 10 days) on liver weight, total liver protein, liver DNA, cell size, cell number and cell number /size ratio through three months. 60
- 13 The overall effect of insulin treatment (1IU/day /rat for 10 days) on cellular aspects through three months. 61
- 14 The overall combined effect of daily dose of internal gamma irradiation(8.6 Bq Cs¹³⁷ /rat) and insulin treatment (1 IU /rat / day for 10 days) on body weight , feed and water intakes and body composition through three months. 62
- 15 The stepwise regression analysis of internally irradiated rats (The relationship among the body composition parameters). 64

- 16 Effect of daily dose of internal gamma irradiation 65
 (8.6 Bq Cs¹³⁷/rat) and insulin treatment
 (1IU/day/rat for 10 days) for three months on
 some hematological parameters.

- 17 The overall combined effect of daily dose of 66
 internal gamma irradiation (8.6 Bq Cs¹³⁷/rat)
 and insulin treatment (1 IU /rat / day for 10 days)
 on hematological and biochemical parameters
 through three months.

- 18 Effect of daily dose of internal gamma irradiation 67
 (8.6 Bq Cs¹³⁷/rat) and insulin treatment
 (1IU/day/rat for 10 days) on some biochemical
 parameters for three months.

- 19 The stepwise regression analysis of internally 69
 irradiated rats (The relationship among the
 hematological parameters).

- 20 The stepwise regression analysis of internally 70
 irradiated rats (The relationship among the
 biochemical traits).

- 21 Effect of daily dose of internal gamma irradiation 72
 (8.6 Bq Cs¹³⁷ / rat) and insulin treatment
 (1IU/day/rat for 10 days) on some cellular aspects
 for three months.

- 22 The overall combined effect of daily dose of 73
 internal gamma irradiation (8.6 Bq Cs¹³⁷/rat)
 and insulin treatment (1 IU /rat /day for 10 days)
 on some cellular aspects through three months.

- 23 The stepwise regression analysis of internally 74
irradiated rats (The relationship among cellular
aspects).
- 24 The overall effect of a single exposure to 6.0 Gy 75
gamma rays on body weight, feed and water
intakes and body composition through three
months.
- 25 The stepwise regression analysis of externally 76
irradiated and insulin treated rats (The
relationship between live body weight (y) and
both of feed and water intakes(X).
- 26 Effect of a single exposure to 6.0Gy gamma-rays 78
on some hematological parameters through three
months.
- 27 The overall effect of a single exposure to 6.0 Gy 79
gamma rays on some hematological and
biochemical parameters through three months.
- 28 Effect of single exposure to 6.0Gy gamma rays on 80
some biochemical parameters through three
months.
- 29 Effect of a single exposure to 6.0Gy gamma rays 82
on cellular aspects through three months.
- 30 The overall effect of a single exposure to 6.0 Gy 83
gamma rays on some cellular aspects through
three months.

- 31 The overall effect of insulin treatment (1 IU / rat / 85
day for 10 days) on body weight, daily feed and
water intakes and body composition through three
months.
- 32 The overall effect of insulin treatment (1 IU / rat / 86
day for 10 days) on some hematological and
biochemical parameters through three months.
- 33 The overall effect of insulin treatment (1 IU / rat / 87
day for 10 days) on cellular aspects through three
months.
- 34 The overall combined effect of a single exposure 89
to 6.0 Gy gamma rays and insulin treatment (1 IU
/ rat / day for 10 days) on body weight , feed and
water intakes and body composition through three
months.
- 35 The stepwise regression analysis of externally 91
irradiated rats (The relationship among the body
composition parameters).
- 36 Effect of a single exposure to (6.0 Gy) gamma- 94
rays and insulin treatment (1IU/day/rat for 10
days) on some hematological parameters through
three months.
- 37 The overall combined effect of a single exposure 96
to 6.0 Gy gamma rays and insulin treatment (1 IU
/ rat / day for 10 days) on hematological, and
biochemical parameters through three months.

VII

- 38 The stepwise regression analysis of externally irradiated rats (The relationship among the hematological parameters). 97
- 39 Effect of a single exposure to 6.0 Gy gamma rays and insulin treatment (1IU/day / rat for 10 days) on some biochemical parameters for three months. 98
- 40 The stepwise regression analysis of externally irradiated rats (The relationship among the biochemical traits). 99
- 41 Effect of a single exposure to (6.0Gy) gamma-rays and insulin treatment (1IU/day / rat for 10 days) on cellular aspects for three months. 102
- 42 The overall combined effect of a single exposure to 6.0 Gy gamma rays and insulin treatment (1 IU / rat / day for 10 days) on cellular aspects through three months. 103
- 43 The stepwise regression analysis of externally irradiated rats (The relationship among cellular aspects). 104
- 44 The overall of combined effect of both internal (8.6q/gCs-13.7/day) and external(6.0Gy as single dose) gamma irradiation through three months on body weight, feed and water intakes and body composition. 106
- λ 45 The stepwise regression analysis of combined effect of both internally and externally irradiated and insulin treated rats (The relationship between body weight(y) and both of feed and water intakes (X). 107

VIII

- 46 Combined effect of both internal (8.6 Bq/ Cs¹³⁷ /rat / day) and external (6.0 Gy as a single dose) gamma irradiation on hematological parameters through three months. 110

- 47 The overall of combined effect of both intrnal (8.6 Bq Cs¹³⁷ / rat / day) and external (6.0 Gy as a single dose) gamma irradiation on some hematological and biochemical parameters through three months . 111

- 48 Combined effect of both internal (8.6 Bq/ Cs¹³⁷ /rat / day) and external (6.0 Gy as a single dose) gamma irradiation on some biochemical parameters through three months. 112

- 49 Combined effect of both internal (8.6 Bq/ Cs¹³⁷ /rat / day) and external (6.0 Gy as a single dose) gamma irradiation on celluar aspects through three months. 114

- 50 The overall of combined effect of both intrnal (8.6 Bq Cs¹³⁷ / rat / day) and external (6.0 Gy as a single dose) gamma irradiation on some cellula aspects through three months. 115

- 51 The overall effect of insulin treatment (1 IU / rat / day for 10 days) on body weight, daily feed and water intakes and body composition through three months. 116

- 52 The overall effect of insulin treatment (1 IU / rat / day for 10 days) on some hematological and biochemical parameters through three months. 119

- 53 The overall effect of insulin treatment (1 IU / rat / 120
day for 10 days) on cellular aspects through three
months.
- 54 The overall combined effect of both internal (8.6 121
Bq Cs ¹³⁷ / rat / day) and external (6.0 Gy as a
singel dose) irradiation and insulin treatment (1
IU / rat / day for 10 days) on body weight, daily
feed and water intakes and body composition
through three months.
- 55 The stepwise regression analysis of internally and 24
externally irradiated rats (The relationships among
the body composition parameters).
- 56 Effect of internal (8.6 Bq Cs ¹³⁷ /rat/day) with 126
external (6.0Gy as a single dose) gamma
irradiation and insulin (1IU/rat for 10 days) on
some hematological parameters for three months.
- 57 Effect of internal (8.6 Bq Cs ¹³⁷ /rat/day) with 127
external (6.0Gy as a single dose) gamma
irradiation and insulin treatment (1IU/rat for 10
days) on some biochemical parameters for three
months.
- 58 The overall combined effect of both internal (8.6 128
Bq Cs ¹³⁷ / rat / day) and external (6.0 Gy as a
single dose) gamma irradiation and insulin
treatment (1 IU/rat/day for 10 days) on some
hematological and biochemical prameters through
three months .
