## THESIS ADVISORS

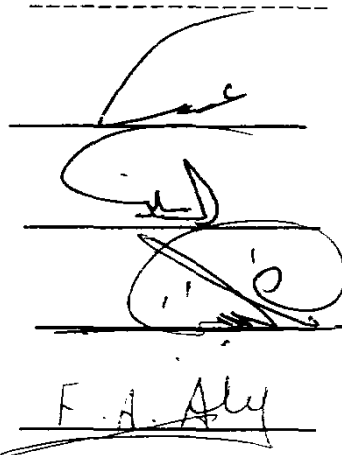

PROF.DR.ABD EL-MAGED AMIN SAMMOUR (D.SC)

PROF.DR.EL-SAYED AHMED SOLIMAN

DR.KHALED MOHAMED ELEWA HASHEM

DR.FAWZIA ABD EL-AZIM ALI

## THESIS APPROVED

The block contains three handwritten signatures, each written on a horizontal line. The first signature is at the top, the second in the middle, and the third at the bottom, which appears to read 'F. A. Aly'.

PROF.DR.N. M. GENDY

A handwritten signature in dark ink, likely belonging to Prof. Dr. N. M. Gendy, written over a horizontal line.

HEAD OF CHEMISTRY DEPT.

## ACKNOWLEDGEMENTS

I wish to express my gratitude to Prof.Dr.Abd El-MAGED AMIN SAMMOUR (D.Sc.) , professor of organic chemistry, Ain-Shams University for his continuous encouragment and readiness to help in overcoming any academic or non-academic problems.

---

My thanks are due to Prof.Dr.El-SAYED AHMED SOLIMAN Ain-Shams University for his help in the completion of the thesis.

I would like to express my profounded indebttness to Assistant Prof.Dr.KHALED MOHAMED ELEWA HASHEM Ain-Shams University who first stimulated my interest in the subject of theoretical conformational analysis. His insights, guidance and inspiration have provided me with vital support throughout the work of this thesis.

A special debt of gratitude is owed to Dr.FAWZIA Abd El AZIM ALY, lecturer in mathematical department Ain-Shams University for understanding the problem and designing the computer programs and for her valuable suggestions regarding the solution of various computational work.

All of the computational work in this thesis was carried out on a PC 286 AT computer system. Thanks are therefore expressed to Mr.TAMER KHALED HASHEM for his efforts in accomplishing the computational work.

My true feelings are given to those who took on the tedious task of typing the thesis. With special thanks to **General AHMED MOHTASIM El-NABARAWY** for directing the final design of this thesis.

Contents.	iii
List of Tables.	vii
List of Figures.	xii
Summary.	xv
 1- <u>Introduction.</u>	 1
1-1 Historical Back-Ground.	1
1-2 A Brief Explanation for the Notation and Calculation Methods of Analysis.	18
<hr/> 1-2-1 <del>An introduction to the Mathematical Fundamentals and Notations.</del>	<hr/> 18
1-2-1-1 The Schrodinger Equation.	19
1-2-1-2 Boran Oppenheimer Approximation.	21
1-2-1-3 Pauli Principle Operator $\hat{P}$ .	21
1-2-1-4 Constraints on the Schrodinger Equation.	22
1-2-1-5 Density Functions.	22
1-2-1-6 The Schrodinger Equation in Orbital Basis.	24
1-2-1-7 Re-casting the Schrodinger Equation.	28
1-2-1-8 The Roothaan Hartree-Fock Model (R H F).	31
1-2-2 An Introduction to Most Methods of Analysis.	34
1-2-2-1 Approaching to the Theories of localized Bonds	34
1-2-2-2 Approaching to the Potential Calculation Method.	41
1-2-2-2-1 Empirical Potential Using Electron-Nuclei (E P E N).	41
1-2-2-2-2 Complete Neglect of Differential Overlap Method (C N D O).	47
1-2-2-2-3 Kalman Filter Algorithm.	49

1-2-2-2-4 Sequential Hypothesis Algorithm.	52
1-3 Aim of the Work and Treatment Methodology.	57
1-3-1 Aim of the Work.	57
1-3-2 Treatment Methodology.	57
1-4 Out Line of the Thesis.	59
 2- <u>Computational Techniques and System of Conformational Analysis for Two Dipeptide Systems.</u>	 62
2-1 Selection Criteria and Full Descriptions for the Two Dipeptide Systems.	62
2-1-1 Geometries of the Used Amino-Acid Residues.	64
2-1-2 Geometries and Properties for the Molecules of the First Dipeptide System.	64
2-1-3 Geometries and Properties for the Molecules of the Second Dipeptide System.	73
2-2 Interamolecular Potential Energy.	76
2-2-1 Electrostatic Interaction Energy.	77
2-2-2 Repulsive Nonbonded Interaction Energy.	79
2-2-3 Hydrogen Bond Energy.	80
2-2-4 Total Intramolecular potential Energy.	81
2-3 Sequence of Computational Analysis.	83
2-3-1 Acquisition of Starting Geometry.	85
2-3-1-1 Computation of Starting Conformation for the Back-Bone.	86
2-3-1-2 Computation for starting Conformation for the Side Chain.	87
2-3-2 Minimization of Potential Energy.	88
2-3-2-1 Initial Adjustment of Side Chain Dihedral Angles.	88

2-3-2-2 Optimization of the Hydrogen-Bond Potential.	90
2-3-3 Final adjustment of structures	91
3- <u>Results.</u>	112
3-1 Selection of the Back-Bone Dihedral Angles Set for starting Geometries of the Two Dipeptide Systems.	114
3-1-1 Adjustment of Back-Bone Dihedral Angles $\phi_1^1$ and $\psi_1^1$ by Using (E C D).	115
3-1-1-1 Head with One Tail Molecules in Monomer Phase.	116
3-1-1-2 Head with Two Tails molecules in monomer Phase.	118
3-1-2 Adjustment of Back-Bone Dihedral Angles $\psi_1^1$ Vs $\phi_2^1$ by using (E C D).	120
3-1-2-1 Head with One Tail Molecules in Monomer Phase.	120
3-1-2-2 Head with Two Tails Molecules in Monomer Phase.	122
3-2 Refinement of Conformational Space (X's) Side Chain Dihedral Angles by Sequential Hypothesis Methods Combined with Kalman Filter.	126
3-2-1 Refinement at the Initial Hypothesis Step.	128
3-2-2 Refinement at the Intermediate Hypothesis step.	129
3-2-3 Refinement at the Final Hypothesis Step.	130
3-3 Minimization of Potential Energy.	133
3-3-1 Partial Atomic Charges.	134
3-3-2 Interamolecular Energy Calculations.	136
3-3-2-1 Electrostatic Interaction Calculations.	136
3-3-2-2 Nonbonding Interaction calculations.	137

3-3-2-3 Hydrogen Bond Calculations.	139
4- <u>Discussion.</u>	201
4-1 Uncertainty Regions.	201
4-1-1 Uncertainties with the Atomic Coordinates calculations.	201
4-1-2 Uncertainties with Potential Energy Calculations.	202
4-2 Assessment the Polarity of Heads and their Conformations.	203
4-3 Conformational Analysis for the Monomers of the Two Dipeptide Systems.	207
4-3-1 Monomers of the First Dipeptide System.	208
4-3-1-1 Isonicotinoyl L-Valine-L-Valine Methyl-Ester (As a Typical Example for System I.)	208
4-3-1-2 A Brief Description for the Other Monomers of System I.	215
4-3-1-3 Speculating a Relation Between Charge Distribution on the Hypothetical Gaussian Cylinder Surfaces for Monomers of System I and their Biological Activities.	223
4-3-2 Monomers of the second dipeptide system	225
4-3-2-1 Nicotinoyl L- $\beta$ -phenylalanine-L- $\beta$ -phenylalanine methyl ester-5-sulphonyl L- $\beta$ -phenylalanine-L- $\beta$ -phenylalanine methyl ester as a typical example for monomers of system II	225
4-3-2-2 A brief description for the other monomers	230
4-3-2-3 Speculating a relation between charge distribution on the hypothetical gaussian cylinder surfaces for monomers of system II and their biological activities	234
5- <u>Conclusion.</u>	243

Arabic Summary	

*vi*  
LIST of TABLES

- 2-1 Specific Properties for the Represented Monomers of the Two Dipeptide Systems
- 2-2 The One Atom Types and Their Characteristics
- 2-3(a) Statistical Survey for the Number of Relevant Types of Bonds and Their Lengths in Respect to the One Atom Scheme of Each Monomer of System I
- 2-3(b) Statistical Survey for the Number of Relevant Types of Bonds and Their Lengths in Respect to the One Atom Scheme of Each Monomer of System II
- 2-4 Cartesian Coordinates for Nonhydrogen Heavy Atoms for Monomers of System I
- 2-5 Cartesian Coordinates for Nonhydrogen Heavy Atoms for Monomers of System II
- 2-6(a) Polarizabilities and Affective Numbers of Electrons of Various Types of Atoms to Calculate the Nonbonding Potential Energy
- 2-6(b) Parameters for Hydrogen Bond Potential Energy
- 2-7 The Pair of Atoms Which Satisfied 1-4 Interactions With One Bond About Which the Rotation Can Occur

- 2-8 The Pair of Atoms Which Satisfied 1-5 Interactions With Two Bonds About Which the Rotation Can Occur
- 2-9 1-4 Interaction Between the Rings and Their Attached Groups
- 3-1 Energy Minima in ECD for Monomers of System I by Varying  $\phi_1^1$  vs  $\psi_1^1$  Using CNDO/2 Method
- 3-2 Energy Minima in ECD for Monomers of System II by Varying  $\phi_1^1$  vs  $\psi_1^1$  and  $\phi_2^1$  vs  $\psi_2^1$  of Both Tails by Using CNDO/2 Method
- 3-3 Energy Minima in ECD for Monomers of System I by Varying  $\phi_1^2$  vs  $\psi_1^1$  Using CNDO/2 Method
- 3-4 Energy Minima in ECD for Monomers of System II by Varying  $\phi_1^2$  vs  $\psi_1^1$  and  $\phi_2^2$  vs  $\psi_2^1$  of Both Tails by Using CNDO/2 Method
- 3-5 Collective Table for the Results of Refinement Steps for Both Starting and Final Geometries for Monomers of the Two Dipeptide Systems
- 3-6  $X_1^1$  Side Chain Dihedral Angle Convergence Rate Results by Using Initial Hypothesis set
- 3-7  $X_1^1$  Side Chain Dihedral Angle Convergence Rate Results by Using Intermediate Hypothesis set
- 3-8  $X_1^1$  Side Chain Dihedral Angle Convergence Rate Results by Using Final Hypothesis set

3-9  $X_1^1$  Side Chain Dihedral Angle Convergence Rate  
Results by Using Final Hypothesis set

3-10(a) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-10(b) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-10(c) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-10(d) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-11(a) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-11(b) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-11(c) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-11(d) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-12(a) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

3-12(b) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set

- 3-12(c) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set
- 3-12(d) A Comparison Between the Convergence Rates  
of the Initial and Final Hypothesis Set
- 3-13 Final Cartesian Coordinates for Non-hydrogen  
atoms for monomers of System I after  
refinement by sequential hypothesis method
- 3-14 Final Cartesian Coordinates for Non-hydrogen  
atoms for monomers of System II after  
refinement by sequential hypothesis method
- 3-15 Charge Distributions Calculated by CNDO/2  
Method for System I
- 3-16 Charge Distributions Calculated by CNDO/2  
Method for System II
- 3-17 An Example of a Typical Cycle to Demonstrate  
the Contribution of Electrostatic Interactions  
in Total Potential Energy for Monomers of  
System II
- 3-18 A Typical Example for 1-4 Nonbonding  
Interaction Calculations for Monomer (a) of  
System II
- 3-19 A Typical Example for 1-5 Nonbonding  
Interaction Calculations for Monomer (a) of  
System II
- 3-20 Cartesian Coordinates for the Proton Average  
Points for Monomers of System I
